**T**HE growing of birds fit to win first place in the very strongest competition is an art which not all breeders can master. Some of the largest poultry breeders depend upon buying their show birds and others avoid the very hottest competition. Many others are successful in growing winners one season but will fail the next. The great advantages of a favorable location and season can hardly be too greatly appreciated. To illustrate: The farmer's wife puts out a few hundred chicks each season and gives them no other care than to feed ground corn two or three times a day for the first few weeks of their lives. If the location and season is favorable, the chicks can find an abundance of tender juicy vegetation, big fat worms and winged insects the entire season. For grain they find plenty of corn around the feed lots and wheat and oats in the fields after harvest. They go to bed every evening with full crops and when mature are ideals of size, vigor and lustrous plumage. But when the season is very dry, the spring late and wet, or the location is unfavorable, the farm-reared birds are nothing but undersized, starved culls. So it can be readily seen that the principal aim of the feeder should be to study the birds in their natural environments to ascertain what foods they crave. During the spring and summer they will prefer to make their rations principally worms and insects with succulent green food and will not eat much grain. As the weather becomes cooler and during the autumn when it is natural for all animals to store up fat in their bodies they will eat large quantities of corn and other carbonaceous

food but will still crave a quantity of meat and green food. Very rarely are conditions such that the chicks can find sufficient tender succulent green food to satisfy them, much less sufficient insects.

By far the best substitute for the worms and insects is buttermilk. At the price at which buttermilk generally sells it is as cheap a "protein carrier" as beef scraps and it is really worth much more as it contains more fat and much more earth salts in proportion to the protein than beef scraps. It is also a great appetiser and cleanser of the digestive organs. The Cornell University bulletin on "Seven Methods of Feeding Young Chicks," says: "Skim milk is one of the best and cheapest of animal foods and seems to induce a more rapid growth on the parts of the chick than would be expected from the amount of food material it contains. Chicks reared on the powdered milk mash and variety rations had good appetites and their plumage was fine, glossy and smooth."

In my own experience I have noticed that growing chicks and moulting hens given all the buttermilk they wanted to drink had larger, longer feathers and their plumage was a glossier, more silk-like white than those not fed milk. In the absence of something better, beef scraps may be fed, but because lacking in oil or fat and in mineral matter they tend towards a too rapid development of the reproductive organs in both sexes and are liable to bring the pullets to laying before they are fully matured. For this reason many of the large egg farms are now using milk instead of beef scraps for pullets up to four or five months old. Of course where the birds have not been accustomed to beef scraps it is necessary to be a little careful and give a few light feedings gradually increasing the quantity for a week or so when it may be kept before the birds all the time.

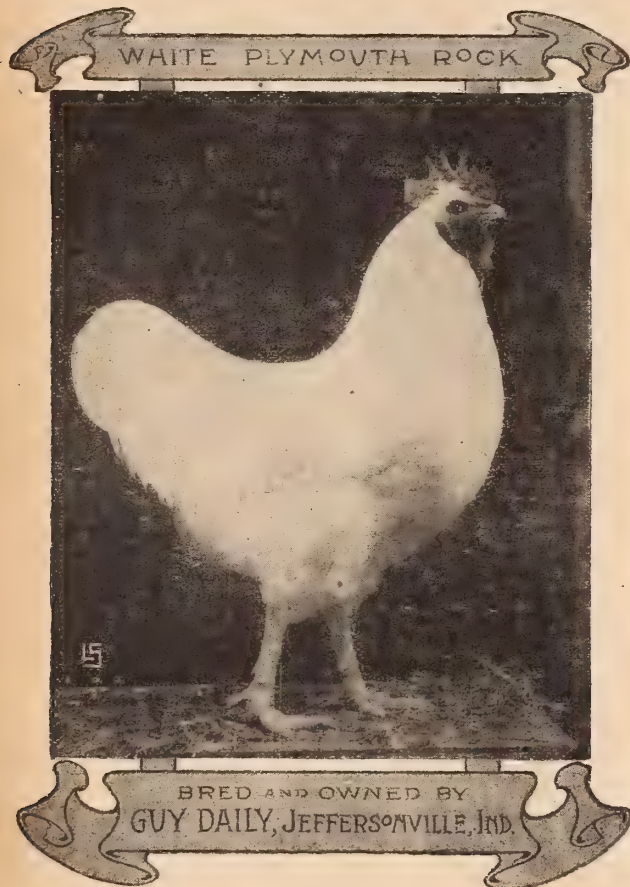

For succulent green food during dry spells of weather, melons and tomatoes are easily grown and convenient to feed as all that is necessary is to cut them in half and throw them in the pens. I have noticed that the hens always lay much better when fed watermelons than when given other forms of green food. Rape is an excellent feed for the back-yard poultryman who must keep his birds confined to feed. More rape can be raised on the same amount of ground than other green food but it requires lots of moisture and so cannot be depended upon when the weather is dry.

If you want your growing chicks to take plenty of exercise and range out and secure insects, weed seeds, etc., you must keep their feed in hoppers where they can get

food contains considerable ash and earth salts and in addition, it contains acid, etc., that renders the mineral matter in other foods soluble so that it may be taken into the blood when eaten by the chick.

If you have ever neglected to, or through ignorance failed to provide green food for young chicks up to several weeks old, you have probably noticed that their growth was nearly all in their feathers, their legs and feet remaining much the same size as when hatched. This is because although a ration composed entirely of grain and meat foods may contain enough mineral matter to supply the needs of the chick only a very small amount of the mineral matter can be assimilated without the presence of the juices of live vegetable food to render the minerals soluble in water. Observation will tend to show that the lactic acid in buttermilk will also dissolve mineral matter and render it digestible. As for example, in the case of fattening birds for market, a ration of ground oats and buttermilk is found to add weight faster and produce a more rapid development of all parts of the chick's body than a ration of ground oats, beef scraps and green food. If one desires to grow extra large birds with loose, fluffy plumage, nothing is better than a mash made of milk thickened with ground oats or ground oats and corn. A system of feeding such as I have outlined is suited only to chicks that are given free range

it whenever they want it as otherwise they will wait around the entrance to the field so as to get their full share when feeding time comes, and will not pick up near as much feed on the range as if hopper fed. There should be a separate hopper for each kind of grain so the birds will not throw out or waste one kind of grain to get at another. I generally have one hopper for corn, one for oats and one for any other grain I desire to feed. I sometimes feed wheat, sometimes kaffir corn, buckwheat or sunflower seed, depending upon the price, though I like to change the grains frequently as it keeps up the chick's appetite.

If the chicks have free range and are given buttermilk or are confined and given all the animal and green food they want, they will not need any mash of any kind (after they are six to eight weeks old) and will probably develop more naturally and have stronger digestive organs and larger feed capacity than if mashes are fed. However, when one is striving to produce birds with loose fluffy plumage or with extra large size for show room or market, some mash will be found very beneficial. The importance of plenty of bone-making elements in the ration is not given the consideration it deserves by most poultrymen. Oyster shells have very little value, in fact experiments tend to prove that they do more harm than good. Bone meal is much better, but does not seem to give nearly as good results as would be expected; undoubtedly a large amount of it is not digested. No grain feed will give such good results in producing large-sized, big boned birds as oats. No animal food is such an excellent bone maker as milk and of green food, clover and alfalfa rank first in this respect. All green

or large yards in which case they will take sufficient exercise, but if you must confine your chicks, you will have to provide some occupation or they will be discontented and continually trying to get out of their pens and will not do nearly so well as if kept happy and contented. One way is to keep a portion of the pen covered with loose clean litter into which the small grain may be scattered early each morning. By closing the hoppers every evening and leaving them closed until about the middle of the forenoon, the chicks will spend several hours scratching in the straw. Another way is to feed corn on the ear, heads of kaffir corn, unthrashed grain or give them heads of cabbage to pick at.

# Womans Success With Poultry

A Department for the Exchange of Helpful Poultry Experiences

## A POULTRY WOMAN'S NOTES.

Eunice Read Wright.

WITH THE APPROACH OF SPRING the poultry woman naturally turns her thoughts chickenward and, by consulting her last season's notes, makes plans to better the profits of the preceeding season.

As a people we have fortunately passed that stage in evolution wherein it could be said that "chicken is chicken" since we have found times without number that real chicken is only chicken when it has been properly hatched, fed and reared and properly dressed and marketed. The proof of the pudding is in the eating and it does not require the services of an epicure to determine

wherein the real article differs from the imitation in the matter of poultry products.

I have been having some experience this spring with the widely-knocked broody hen. Like countless others I was greatly prejudiced against them. For several years they have seemed to me as the egg-farm poultry woman's bane. They have such a persistent way about them and such a habit of becoming broody in bunches. Yesterday when the eggs were gathered, not a broody in evidence. Today the

half a show they will repay well the time and attention spent on them. Besides, after the chicks are hatched they know so much better than I, what to do with them.

In work with broody hens, the main thing is to start off a goodly number with eggs at the same time, so the chicks may be properly divided up and apportioned to the best mothers at the end of the hatch. I have found that a long row of nests placed in an open front shed is about the most convenient way of handling a number of broodies. Of course later in the season, a group of nests

may be placed in a sheltered place under a grove of trees but this is not safe until the frost is well out of the ground.

No hen, be she ever so even tempered is able to keep her own council and incubate a sitting of eggs if her carcass is literally infested with vermin. We can excuse her any of those disagreeable things usually attributed to broody hens under such conditions. Therefore the poultry woman, wise in her day and generation, gives each and every candidate for motherhood in the poultry yard, a vigorous dusting with Persian insect powder, just on suspicion. It is always well in a case like this to take no chances. Also discard all old nesting material, using only clean hay or straw and give the hen every opportunity to keep her nest clean. She should be allowed enough room to exercise when off the nest and be taken off at regular intervals each day. The eggs should be tested the same as when set in incubators and doubled up wherever possible, the hens that have proved themselves to be good mothers being again entrusted with eggs.

A nest of eggs is no place for a wild and scary hen. In fact, I have found no place so well fitted for her as the roasting pan. Even in the laying pen she is spending more energy in making a racket than in producing eggs. The broody hen to be successful must be the quiet motherly sort, and she must be given a chance to keep herself and her surroundings clean. To be shut up in a tight coop with no chance of escape for days at a time, with little food or water is not conducive to successful hatching with hens. Give the broody hen a chance and she will prove her worth.

nests are literally full of them. And let me whisper it, although a poultry woman for some years I have never yet felt quite safe, or felt able to refrain from jumping back when a real determined biddy pecks at me. So as a safeguard, I have taken to wearing canvas gloves always in my work about the poultry. Aside from the cowardly side of the matter, the amount of grime kept from the poultry woman's hands by the habit of wearing canvas gloves is something surprising.

Now in regard to the broody hen movement, I have enlisted this season in their favor and am convinced that with

# The Future of the Poultry Industry

Chances of Success in the Poultry Industry Growing Greater Every Year.

By Chas. H. Simmonds, Camp Point Illinois

THE PAST YEAR has seen a great many people enter the poultry business. Many are business men who simply keep a few fancy fowls in their back yards to divert their attention from the care of larger transactions, others are clerks and factory employes who find in a flock of hens a means of pleasant recreation and a possibility of increasing the comforts and decreasing the expenses of the home. But many have left their professional careers, their factories, mercantile businesses, breweries and distilleries to devote their capital and their time exclusively to the poultry business.

Those who have had experience in and understand the poultry business welcome these capitalists to the ranks, but many would-be poultry keepers are afraid to invest in the business for fear of an overproduction as the result of so many engaging in the business on a large scale. In fact, people not interested in the poultry industry have been talking overproduction of poultry products as long as I can remember, but every year sees thousands more engage in the business and every year sees a greater demand for fancy poultry, eggs and market poultry of high quality. In our large cities there are thousands of people who have never tasted a strictly fresh egg or fresh milk-fed chicken that

are many failures in the poultry business which the public credits to the business rather than to the man, where it rightly belongs.

Because a man is successful in some professional career or a skilled workman is no sign he will make a successful poultryman, but any man that can make a success of any other commercial enterprise can succeed in the poultry business. The fact that many who fail to "make good" in other like industries succeed in the poultry business only goes to show what great opportunities there are in the poultry business for men of good business ability.

Ninety per cent of the failures in the poultry business can be traced to one or more of the following three causes: First, a lack of ability to manage the financial part of the enterprise; second, an improper arrangement of the poultry buildings and yards; third, lack of systematizing the labor on the plant.

The first cause, "Lack of ability to manage the financial part of the enterprise," accounts for more failures than anything else. Some men are natural born financiers, others

are greatly lacking in financial ability and seem unable to learn to manage any business which necessitates a large investment of capital, as a factory, a mercantile business or the poultry business. The majority of people possess the ability to manage a poultry business after they have had a little experience, but so many enter the business on the impulse of the moment, investing all their available capital and often borrowing more. Lacking the knowledge that can be gained only by experience they invest in stock and poultry appliances that are of no advantage and fail to retain enough cash for emergencies which are sure to come. It is impossible to give any fast rules on how to start in the poultry business, but one thing should always be remembered: "The hens are the money makers on a poultry farm." Good buildings and labor saving devices are a great help, but one should spend at least five times as much for stock as for buildings, appliances, etc. Here is where many "fall down." They invest a thousand dollars in the latest type and most expensive poultry buildings and then when it comes to buying the birds to fill those buildings they spend say a hundred dollars and too many times buy as many birds as they can get for the money rather than

would become regular buyers of these products could they only secure a high quality. Others consider the cold storage products unfit for food and the fresh article too expensive, but would become consumers if the price would only drop a little. There is no possible chance in view for a drop in the price of eggs. However, the majority of poultrymen could, by adopting better methods, so lower the cost of production as to be able to stand quite a drop in the price of eggs without decreasing their profits. And still there

purchase a few of the best. Never give up a good position or business to go into the poultry business without a little previous experience. You would not think of entering any other profession without education, experience, or both, and be successful from the start, so why expect more of the poultry business? Almost anyone can make a success of keeping laying hens or raising fowls for meat, but it requires experience and careful study to successfully operate incubators and brooders, mate to produce exhibition birds and condition for the show room. If one will start with a trio or small pen of extra high class birds, subscribing for several poultry journals and carefully studying the business to learn the special type of house and system of feeding best suited to his or her birds and climate and learn the requirements of the market for which the birds are raised, their flock will soon multiply to larger proportions and they will be sure of success. A proper arrangement of the buildings and yards on a poultry farm is one of the first essentials to success. Many poultry plants are still planned on the old style of long houses and long, narrow yards that become bare of vegetation after the first season, but the new system of large flocks and free range is fast taking its place. On

sional potato scratched out of the ground is only a small part of the increased yield resulting from the birds keeping down weeds and insects and fertilizing the soil. The small unmarketable potatoes should be stored in the cellar to use for "green food" in winter. They will eliminate the work of sprouting oats and the danger of feeding mouldy or sour oats. Another good crop to raise on the poultry range is corn. If planted early it will furnish abundant shade for the birds during the warmest summer weather and where one raises his own corn he runs no risk in feeding mouldy or musty grain. If the birds are not fed corn liberally it may be necessary to keep them confined a week or so after planting the corn, but I have let mine run in the corn field while it was being planted and ever after without doing any damage. There were several rods of meadow land between the poultry houses and the corn field and the birds ate the grass and never bothered the corn blades. A corn field is an ideal place to start chicks, as there is no stubble or tall grass to interfere with their foraging and the growing corn furnishes fine protection from hot sun and wind.

Fruit raising also combines well with poultry raising, the trees furnishing shade and fallen fruit for the fowls, and

YOUNG STOCK ON RANGE. MOUNT PLEASANT FARM. MT. POCONO, PA.

several large egg farms hens are now kept in flocks of 100 to 500 to the house-pen and several thousand on the same range. Of course where one desires "special matings" of fancy fowls it is necessary to use yards, but the yards should always be large enough to allow the use of a horse for thorough cultivation when necessary and to produce plenty of grass and trees for the health and comfort of the fowls.

Not possessing enough land to allow the fowls liberal range, it is far better to keep them always confined to the houses than to use small contaminated yards. As great or greater egg-yield can be obtained by this method as where the birds are given free range, though it requires more feed, litter and labor to care for the birds. It is a waste of high-priced land to use small, bare yards and a waste of high-priced feed and labor to keep the fowls confined. Take down the fences, decrease the labor and cultivate the land. The crops will benefit the fowls and the fowls will benefit the crops. Of course, the birds cannot be allowed to range in the kitchen garden or berry patch without doing damage at some seasons of the year, but they will do more good than harm to most field crops.

Potatoes are an excellent crop to raise on the poultry range. The fowls never touch the foliage and the occa-

the fowls keeping down insect pests and weeds and furnishing the best of fertilizer. There are these disadvantages, however, that one must wait several years for returns from the fruit and often you will want to take out trees to make room for a new poultry house. Catalpas make excellent shade and may be planted on hilly land that will produce nothing else. The time is fast coming to an end when the American people can afford to waste their land as they have always done. The arrangement of the buildings should be such as to save as many steps in caring for the birds as possible. The feed house and a deep well should be near the main buildings.

The brooding of the young chicks as practiced on most plants is very expensive for labor, and experienced, high priced labor at that, but the new brooder-stoves or open-hover brooders are fast taking the place of the old style long hot water pipe systems and individual lamp brooders. These brooder-stoves that brood 500 to 1,000 chicks all in one flock are great labor savers and very easy to operate, there being no danger of the chicks getting too hot or suffering for lack of ventilation. The modern poultryman is also turning much of his attention to the old hen as the best incubator and brooder to produce high-class show birds and breeders.

# EDITORIAL

WE LEAD  
OTHERS FOLLOW

65,000 A. P. J.'s FOR APRIL, 1913.

State of Illinois, County of Cook, ss.:  
G. M. Atwell, president of the Atwell  
Printing House, Chicago, being duly  
sworn, certifies that the American Poul-  
try Journal has contracted for printing  
and binding sixty-five thousand copies of  
the April, 1913, issue.

G. M. ATWELL.  
Subscribed and sworn to before me this  
21st day of March, 1913.

(Seal) HENRY G. EISERT,  
Notary Public.

## OUR GUARANTEE.

We guarantee our subscribers against  
loss due to fraudulent misrepresentation  
in any display advertisement appearing in  
the American Poultry Journal, providing  
the subscriber when ordering the fowls  
or merchandise states that the advertise-  
ment was seen in the American Poultry  
Journal, and places the order during the  
month or months in which the ad is in-  
serted in our columns and notifies us of  
the fraudulent misrepresentation of the  
advertiser, giving full particulars, as soon  
as it occurs.

## Lecture Bureau Committee's Appeal

We call attention to the "Appeal  
for Aid," by Chairman W. Theo.  
Wittman, which is reprinted in an-  
other column from the March A. P. A.  
Bulletin.

Chairman Wittman is on the right  
track and he deserves help, although to  
our mind he has not asked for nearly  
enough. The American Poultry As-  
sociation ought to own good instruct-  
ive lantern slides on poultry subjects  
and modern equipment for the use of  
lecturers, and it ought to go still fur-  
ther (as H. H. Stoddard several times  
has pointed out) and have a good  
series of moving pictures for instruc-  
tion in poultry work. The "movies"  
are among the very best means of  
teaching. Moving pictures that would  
show how modern poultry keeping  
should be done, accompanied by a good  
lecture on the subject, would be well  
worth appropriating money for and  
could be made to do a vast deal of  
good. Sure, it will cost money, but  
it will be well worth it.

At the present time the Oregon Agri-  
cultural College is doing a great work  
for better poultry with the new course  
of "movies" instituted under the di-  
rection of Prof. James Dryden. Uncle  
Sam, through his Dept. of Agriculture  
ought to be doing the same thing. So  
had all of the state colleges that are  
having poultry courses. Lantern slide  
lectures are good. The A. P. A. ought  
to work for them. "Movies," or  
speaking moving pictures now known  
as "Talkies," are better and we be-  
lieve that the American Poultry As-  
sociation should strive for the best.  
Go about it in the right way and after  
the initial investment such courses of  
"Talkies" could be made self support-  
ing. Go to it Mr. Wittman, but ask  
for more, strive for more, and get all  
you can for the benefit of the American  
poultry industry.

Irondequoit, New York.

## SUBSCRIPTION PRICE.

United States and Mexico, 1 year, \$1.00;  
3 years, \$2.00.

10 cents a copy of all newsdealers.

Canada, 1 year, \$1.25; 3 years, \$2.75.

Foreign, 1 year, \$1.50; 3 years, \$3.50.

Look at the address on your wrapper.  
See that it is absolutely correct and no-  
tify us of any mistake, no matter how  
slight. Note the expiration date which  
appears thereon, as American Poultry  
Journal stops with the issue marked on  
your wrapper.

If you change your address give both  
your old and new address as well as your  
subscription number when notifying us of  
the change.

AMERICAN POULTRY JOURNAL is  
the oldest poultry paper in America. It  
has a national and world-wide reputation.  
The best writers on poultry matters con-  
tribute to its columns. It receives the  
patronage and endorsement of the fore-  
most representative breeders of standard  
poultry and manufacturers of poultry ap-  
pliances in the country.

Just a word about compensation of  
poultry lecturers. At the present time  
state boards pay lecturers an honor-  
arium of \$10 per lecture. Usually the  
most a poultry lecturer gets is \$10 and  
expenses. It isn't enough. Any good  
man competent to give an instructive  
lecture on poultry subjects cannot af-  
ford to make lecture trips on such  
terms. He loses in both time and  
money. We have given our last lec-  
ture at the \$10 rate. We can't afford  
such lecture engagement. The last  
two cost us a good deal more than we  
got out of it. As Mr. Wittman says:  
"the dollar must be the test." We  
can't afford to spend \$10 in cash and  
\$20 in time to give a lecture that calls  
for a long railroad trip, a talk of an  
hour and a half's duration before noon,  
a lunch of "coffee and sinkers" while  
answering questions during the lunch  
intermission, and then another hour on  
the platform, all for the modest sum  
of \$10 honorarium and \$5 expense  
money. We have done it a number of  
times and gone \$15 in the hole, "for  
the good of the cause," but we have  
had to quit it and decline such lecture  
opportunities with thanks "for the  
good of our family." Twenty-five dol-  
lars and expenses is none too much to  
pay a man competent to deliver a good  
lecture on poultry and the entertain-  
ment committee ought not to expect  
to keep him talking all day on a lunch  
of coffee and doughnuts, even at that  
price. Keep the ball a-rolling.

## Preserving Eggs

At this season of the year, when  
eggs are low in price, there are a good  
many people who "put down" (pre-  
serve) eggs against the season of  
scarcity and high prices.

There is only one method that is at  
all satisfactory, with the exception of  
commercial cold storage, and that is

the water-glass method of preserving  
eggs. Briefly this process is as fol-  
lows: Clean, sterile eggs (new laid)  
are packed in a stone jar (or other  
similar covered container), they are  
then completely covered with a ten per  
cent solution of water-glass in steril-  
ized water; the jar is covered and  
placed in a cool room where the air is  
kept fresh and free from objectionable  
odors. Water-glass syrup (silicate of  
soda of 1.12 specific gravity) is used  
for making the solution. In general  
usage take one quart of water-glass  
syrup and mix it with nine quarts of  
boiled water. Be sure that the solu-  
tion is cold when poured over the eggs.

The water-glass method of pre-  
serving will keep eggs in edible con-  
dition for ten months to a year. When  
they are wanted for use they are re-  
moved from the solution, rinsed, dried  
and used like other eggs. They fry  
well, serve for almost all culinary pur-  
poses, but seldom make good frosting  
or confections. They can be poached,  
but in order to boil them it is neces-  
sary to punch a needle hole in the big  
end of the egg, otherwise the shell  
will burst. We have tried them and  
tested them at all ages of preserva-  
tion from six months to eighteen  
months. We never have any difficulty  
in telling preserved eggs from fresh  
ones. We have never preserved eggs  
ourselves except for experimental pur-  
poses.

Personally, we class the preserved  
egg and the best storage eggs in about  
the same class as food. We don't care  
for them and we don't want them on  
our home table. A fresh laid egg right  
from the nest, or not over a week old,  
is none too good for us. We are  
rather fussy about what we put into  
our mouth and still more so about what  
goes into our stomach. We don't be-  
lieve that anything can be too good  
and we know a lot of things that are  
not good enough. It is a mistaken

policy that economizes on foods and blows itself on doctors' bills. The best food is none too good. Old and stale foods often have developed within them some properties that are injurious.

All strictly fresh eggs are not all good. We prefer, after becoming more intimate with the method and manner of egg production, to have eggs only from hens that we know are healthy, well kept and properly fed. We don't think that five cents each is too high a price to pay for properly made eggs that are new laid. We had rather have one real new-laid, properly-fed egg at five cents than two, three, or even four doubtful eggs for the same amount of money. The two cent egg don't interest us much. It is sold at a price too close to the actual cost of production to be really good. Cheap produce, cheap prices. Good produce, good prices. You can't get something for nothing. When you think that you do, you get left.

Think it over. When you eat an egg select one that isn't ashamed to "stand up" and look you in the face. The flat-yolked "shifty-eyed" kind are poor sort to introduce to your stomach.

#### Legislation Against Cooperation

When one studies recent attempts at "fool legislation" in various states and the present situation in the National Government, he may well ask: "Where are we at?"

For some time past our Uncle Sam has given us to believe that he was in favor of encouraging cooperation among poultrymen and farmers, which would result in better quality goods, better understanding and methods of doing business between producer and consumer, and better returns with a better chance for making a good living for the producers.

The following editorial quoted from the Saturday Evening Post furnishes some food for thought for poultrymen and farmers. Evidently some of our lawmakers are not as much in sympathy with the struggling producers and cooperation as we have been led to believe:

#### "GETTING AFTER THE FARMERS."

"Senate bill number forty-three, introduced in the New Jersey legislature at the instance of President Wilson when governor, says that persons who 'make any agreement by which they directly or indirectly preclude a free and unrestricted competition among themselves in the sale or transportation of any article or commodity, either by pooling, withholding from the market or selling at a fixed price, or in any other manner by which the price might be affected,' shall be subject to three years' imprisonment and a thousand-dollar fine.

"Apparently this would hit all cooperative associations among farmers for the marketing of fruit and vegetables. Practically all such associations are pools—all of them are entered into for the express purpose of preventing competition among the members in the selling of their produce; the primary object of all of them is to affect the price.

"In various instances these co-

operative associations have been the farmers' salvation. So long as they marketed their fruit or vegetables competitively, each grower acting for himself, they got no return for their labor and investment. It was only when they marketed through a cooperative pool that they made any profit. At the same time these cooperative associations, in nearly all cases, have raised the grade of the fruit, introduced better packages, and as a net result have increased the price to the ultimate consumer very little if at all.

"The statute book may declare this to be a crime, but is it?"—(Saturday Evening Post.)

The above is doubly interesting at this time. President Wilson is now the head of our National Government and it will be for us all to learn if he still holds to this view of cooperation. Also one of our poultry journals, Poultry Husbandry, edited by D. M. Green, has gone in strong for cooperation among poultrymen and is devoting a large proportion of its space monthly to "Spreading the Gospel of Cooperative Marketing" for "The Common Good." We are in sympathy with Editor Green's good work, and we have understood that Uncle Sam through his Department of Agriculture encourages cooperative measures. Now we have State legislators striving to make cooperation a crime and at the instance of the man who is now our President. "Where are we at?"

#### Mr. Stoddard's Review of That "Remarkable Bulletin"

So much attention is given nowadays to improving the laying qualities of poultry, and the matter is of such importance, that we call special attention to the first installment, in this issue, of a review by H. H. Stoddard of a late bulletin on the subject, from Maine Station, by Raymond Pearl, Ph. D.

Two points especially that Mr. Stoddard makes are worth thinking over in connection with Dr. Pearl's contention that unusual fecundity cannot be bequeathed by a hen to her female progeny; a position which if maintained would change the efforts of hundreds of earnest poultry breeders.

First, that when, in the human family, or in other branches of mammalia that normally bring forth one at a birth, there are twins, the occurrence tends to crop out repeatedly in the female line for several generations, the sides being meanwhile from stock in which twins were unknown. This surely is a plain case where unusual fecundity is inherited on the female side of the house irrespective of the males.

The other matter in the review we wish to point out as well worthy of consideration is, that when the sole influence of blending unrelated stock increases fecundity at once, as emphasized by Darwin, a fecundity that is inherited for several generations; the blending itself is not, and cannot be, dependent on one sex alone. A fusion in its essential nature implies dual cause. Any influence dependent on union in breeding is dependent on two factors, not on one alone, which last would be impossible, Mr. Stoddard says. This militates against the claim of Dr. Pearl that unusual fecundity cannot descend from the female side, a position which, as we pointed out last

month, contains a degree of improbability at the start so great as to almost amount to impossibility.

#### The Coming A. P. A. Election

Nomination returns for the coming American Poultry Association election will be found in another column. Judging from the vote on the nomination ballot we are likely to spend the second week in August at Atlantic City, New Jersey. Well, there are worse places on the map at that season. There are sure to be amusements enough of all kinds for those who go to ride on the joy wagon. We can look for sea breezes, sea food, mermaids and sharks,—and all of the sharks won't be in the sea. You'll need to take a good bank roll along with you and the chances are that when you leave, the hotel man will have the fattest share of it. It's all in the game. That is what shore resorts are for. So, get a ten dollar a day room and take your meals at Childs, or some stand up lunch, if you have any funds left. We note that Chicago had 118 votes, Boston 17 and Buffalo 16, and we are wondering who voted for 'em. You could find both economy of cost and comfort in any one of these three cities for a sane business convention, but who wants anything like that when out for a junket?

The vote on the nomination ballot probably indicates how the election may be expected to go for new officers for the association. Although Mr. Hicks has stated positively that he is not a candidate for reelection we note that he received a good complimentary vote. These votes ought to be placed where they will do the most good on the election ballot. Secretary Campbell seems to be comfortably sure of reelection and that is a good thing for the association. As for the rest of the ticket we haven't any comment except,—may the best men win.

#### Lecture Bureau Committee Affairs—An Appeal for Aid

By W. Theo. Wittman, Chairman.

There are many calls to lecture before Y. M. C. A.'s institutes, schools, clubs, granges, etc., usually without remuneration. Now, if the American Poultry Association had the money, or having the money could be persuaded to vote it for the purpose, the ideal way would be to have lanterns and a series of the very best slides for the free loan or use of every one of its licensed or authorized lecturers.

There can be no question, that if the American Poultry Association was on its job, it would be doing this. Would be doing this in a liberal and comprehensive way, thus enormously furthering the interests of the poultry people and the poultry industry.

As for the American Poultry Association putting poultry lecturers in the field, or partly remunerating poultry lecturers for work done, that is impossible now and will always remain so, at least, until the Association revises or re-adjusts its financial policies. From much experience, I know that it would simply be impossible to carry along a single lecturer for less than \$5.00 per day, expense for railroad and hotel alone. Or to get men that are capable for less than \$5.00 per day salary. Therefore, to even begin to cover the United States and Canada would cost the American Poultry Association from \$100,000 to \$500,000 annually.

A much better way and a more feasible way would be for the American Poultry Association to yearly vote, say \$500 or \$1,000 to the Lecture Bureau Committee for the distinct purpose of getting the various states to put more and better poultry lecturers in the field. Furnish the various State Bureaus or Departments of Agriculture, and possibly the State Experiment Stations, annually, carefully revised lists of lecturers that have been approved by the national poultry body, or, the American Poultry Association that can be equipped with lanterns, or at least approved slides. Now, that "extension work" along all lines of agriculture is being fostered, it especially behooves the American Poultry Association that it sets its stamp of

approval, in the form of a license or otherwise, only on thoroughly good men. These men should first of all have made good with their own poultry keeping in fact, to be blunt, should have made dollars while in the poultry business. We may, some of us, still deery the dollar mark basis; but the dollar must be the test. For 99% of the people who are in utility poultry are in it for the "dollar." And this ratio will be the ratio of the future. Further, lecturers should be of high moral character and be able to present their subject in a pleasing manner.

Now, if there is one thing that America has, beating all the rest of the world, or distinctively "American" it is the number and extent of its poultry "farms." To have a series of slides showing these farms in detail as they exist in every section, or even state, of our country would be very much worth while. Such slides would not only be highly interesting to the average audience, but would trend to immensely impress the general public with the extent and possibilities of poultry farming and pure-bred poultry. Would be a good advertisement for the country, for the state or section and particularly for the owners.

If such slides truly representative, can be gathered together, the American Poultry Association, or possibly, the Exposition people themselves might have a continuous performance, or a continuation of slides on the screen with a lecturer in attendance daily during the continuance of the great Poultry Show at the Panama-Pacific Exposition, San Francisco, 1915. Such an entertainment would prove immensely popular and be the greatest advertising stunt ever pulled off by the American poultry fraternity. Therefore, as chairman of the Lecture Bureau Committee, I would urge all large and representative poultry plants in all sections of the United States, including incubator and supply plants, poultry publications, duck farm, etc., to have made, in the next few months, a complete series of photographs of their plants. Plants as a whole and plants in smallest detail. Let the photos be good ones. Let them be numbered and accompanied with a descriptive synopsis. The right is reserved to reject all that are not good or are not suitable. None will be re-

turned, but it is agreed that such will be destroyed and not used for other purposes. Mail to W. Theo. Wittman, chairman Lecture Bureau Committee, Allentown, Pa.—(American Poultry Assn. Bulletin.)

#### DR. WOODS' NOTES AND COMMENTS.

Our proofreader got tangled up and lost in the rush of business that came with the work of publishing the March American Poultry Journal, and as a result there were some weird errors of the types. Practically all the quotation marks were left out of quotes in "Home and Table Department" and in Mr. Stoddard's grist. In the heading of Dr. Harvey R. Gaylord's article on "Cancer in Fowls and Its Prevention" his name was misspelled and the word "decided" was used in place of "desired." Please note that co-operation of breeders is desired in the study of fowl cancer by Dr. Gaylord. There were many other "bad breaks" of the types too numerous to mention. However, our proofreader has been duly re-proved and has promised to do better hereafter.

\* \* \*

M. Russell James, of Camp Meeker, Cal., writes us concerning one of our February editorials, as follows:

"Your editorial, 'The "War" on Egg Prices,' was such a surprise to me, coming from a poultry journal, that I must even take time to write a word of congratulation to a poultry editor that has the courage to say things which might possibly keep some fool city person from rushing into the poultry business. The mission of the poultry journals, per se, seems to be to get everybody into poultry, and to leave them to get out as they can.

"My opinion of the new fad of the society women to get busy and get into print is the same as yours. The daily papers are only too glad to get such a popular theme to dilate on, and so gives them a boost on all occasions. I have the Poultry and Farm page, which is a feature of the Sunday Sacramento Union, and tried to show up in my department what it all meant to poultrymen and eventually to the consumer, even while the editorials were extolling the 'Woman's League' to the skies. The expected has happened and the cold storage people are not buying up eggs for the

## WHITE ORPINGTONS

### An Established Strain with an Established Record

Write for catalogue giving list of winnings at Madison Square Garden, Chicago, Buffalo International, Cleveland, Allentown, Hagerstown and Pittsburgh. We have supplied hundreds of guaranteed winners and have started thousands of people in the chicken business with breeding stock at moderate prices, quality considered. We are now booking orders for winners for the fall and winter shows, in Single Comb as well as the new Rose Comb White Orpingtons, on payment of a small deposit.

**We have improved the White Orpingtons and we can improve your flock**

A few bargains left in yearling breeders. "Poultry for Profit" gives the essentials of the poultry business. Price 25 cents. It contains no advertising. Our advertising is free for the asking.

**LAWRENCE JACKSON FARM**  
BOX A, HAYSVILLE, ALLEGHENY CO., PENNA.

leagues to sell below cost; consequently, eggs are lower than they have been on this coast in ten years, and indigo is the color of our poultry farmers' skies."

At the present writing (March 14) nearby hennery eggs in the Boston market are wholesaling at 24 cents a dozen, which is about where they were a year ago this time. Since the December "egg war" the price has dropped steadily. The crusade flattened out and consumers soon tired of the storage eggs that were being unloaded on them. Stale eggs, with several bad ones to the dozen, don't sell well a second time to the same consumer, and the unloading of such eggs doesn't help the consumption of eggs of better quality. No doubt some storage men made a good thing out of the egg crusade, but it is now a thing of the past, and we don't think the same game can be worked on the public another time.

Just now the sensational newspapers are having a "war" on the sale of rotten eggs and rotten egg products to cheap bakeries and confectioners. It may do some good and we hope it will. One of its effects, however, will be to lessen the consumption of really good eggs. Anything that causes the public to distrust the quality of eggs checks consumption. It is a fact well known in trade circles that a number of firms have been salvaging dirty, check, spot and rot grades of eggs for a good many years. Prominent scientific men have been engaged to testify that these salvaged rotten eggs are perfectly good food. One manager of a big firm in this business employed a certain Institute of Technology professor several years ago to work on rotten eggs, and has kept him employed ever since on similar investigations, the purpose being to discover just how rotten an egg could be and still not be absolutely harmful if used as food.

Some six or eight years ago we visited the plant of a big concern that makes a business of salvaging doubtful and bad eggs, and which has a chain of similar depots across the continent. We were shown all details except one department, where eggs were evaporated, or dried, to make supplies for bakers and tanners. The process in that department was "secret." We visited the place with the intention of writing it up, but after looking into matters we did not see our way

clear to make a satisfactory report of it. The firm was regularly inspected by the city board of health and had a number of scientific men of good standing on its pay roll making investigations. The story of the process was sure to prove repulsive in print, and a detailed review of our own observations and opinions would have been liable to start litigation. Some years later this firm was brought into court by the government authorities for violation of pure food laws and it put on a number of scientific experts to testify in its behalf, and beat the government to a frazzle. We note that in the present crusade against firms which deal

A pair of White Indian Runner Ducks, as bred by Jas. R. Snyder, Frazier, Mo.

in and salvage rotten eggs the name of this big firm is not mentioned, only the small fry are being made the "goats."

We recall that we were told that a spot or rot egg could be made perfectly wholesome and edible by taking out the bit of rot, just as one might cut out a rotten spot from a specked peach. We saw long lines of girls at tables breaking low grade eggs and separating the whites and yolks and scooping out the rotten places. The whites went into one can, the yolks into another and the "rot" into another. The saved yolks and whites were sold canned and frozen to bakers and confectioners and even to some hotels. The process did not look appetizing to us. Eggs unfit for food were said to be prepared for use of tanners and in

the arts. Recent developments in the rotten egg crusade show that a good many of the packages marked "non-edible" and "tanners' egg yolk" really do go to bakeries and to candy factories to be worked up into food. It is claimed that some of these reclaimed bad eggs were fed to guinea pigs and the pigs died as a result. The government has again stepped in and is investigating. Good may come of it, but we are still some skeptical. We hope for the best, but there is a whole lot of reform needed in all of our American food supply. We have to eat meat that could not be sold abroad. Our meat inspection is a farce and worse. The inspection at country slaughter houses is even worse than at the big city plants. We get diseased, doped and adulterated foodstuffs all along the line. There are spasmodic and sensational reform movements that are chiefly newspaper "guff," then a nine days' wonder and horror at conditions, and we slip along to a fresh sensation. We need a fearless and honest pure food administration by the government of this country and one that can't be seduced by the powerful money interests. The question is, will we ever get it?

We don't believe that a bad egg can be reformed. You can't take a rotten or spoiled stale egg and make desirable wholesome food out of it. Every time such reclaimed bad eggs are used, or the products of such eggs, a long chance is taken of poisoning some innocent human being. Some folks are more susceptible to such poisoning than others. In practically every market in this country diseased meat and bad eggs, as well as other spoiled foods, are being sold. Investigate and see for yourself. You don't have to be so very observing to see a good deal that ought not to be so. Keep plugging away at your law makers until they provide and enforce a remedy for the evil.

We are told that if it were not for cold storage the price of eggs would drop out of sight in the spring and summer and go soaring up toward the skies in the season of fall and winter scarcity. The cold storage saints garner the crop in time of plenty and so save too great a fall in price, and save the eggs against the time of scarcity and high prices that we may have eggs at reasonable prices. We have read buncombe platitudes on this theme

## REGAL RECORD LAYERS

Regal White Wyandottes have long been noted for their splendid laying qualities. By means of the trap nests I have developed a strain of birds that are wonderful performers. Scores of letters from customers bear testimony to this fact. I submit the following affidavit from a Michigan customer giving the laying of an exhibition pullet I sold him:

State of Michigan, U. S. A., County of Jackson.

This is to certify that on the Eighth day of December, 1910, I purchased of John S. Martin of Port Dover, Canada, one White Wyandotte pullet and that on or about December 20th, 1910, said pullet began to lay and from said date until the 1st of November, 1911, I received from said pullet 235 eggs.

Signed Fred Koons,

210 Summit Ave., Jackson, Mich.

State of Michigan, County of Jackson.

I personally appeared before me Fred Koons and makes affidavit that the above foregoing statement is true to the best of his knowledge and belief.

Subscribed and sworn to before me this 12th day of December, 1911.

Signed Frank J. Wheaton.

Notary seal.

For the season of 1913 I have mated up twenty beautiful exhibition matings, all headed by my winners at the New York State Fair and Boston, and containing all my exhibition females.

Price of eggs from pens 1 to 20 (as they run): \$5 per 15, \$9 per 30, \$12 per 45, \$24 per 100. Pens 5 to 12 are special matings. Eggs from special matings only (as they run): \$10 per 15, \$18 per 30, \$25 per 45, \$50 per 100.

RECORD LAYING PENS—Dorcas Line. Pens 21 to 26 are headed by males bred from females with big records. Some of these males also have exhibition records. The females in the six pens are composed of yearlings with trap-nest records from 180 to 224 and pullets of the same breeding. From these pens eggs are \$5 per 15, \$15 per 50, \$27 per 100, \$50 per 200. Utility matings of vigorous surplus stock, \$5 per 50, \$9 per 100, \$17 per 200, \$25 per 300, \$75 per 1000. 500 cocks, hens, cockerels and pullets for sale. SPECIAL—50 big, vigorous, stay-white, Dorcas line cockerels, \$10, \$15, \$20, and \$25 each. Dorcas pullets \$5, \$8 and \$10 each. Utility cockerels \$5 and \$5 each.

Send four cents in stamps for the Regal White Wyandotte Book, the finest book ever published, dealing wholly with the White Wyandotte. FREE—20-page illustrated catalogue and mating list. It gives full description of my matings for 1913.

JOHN S. MARTIN

BOX 51

PORT DOVER, CANADA

Crusader III, a Boston Winner

until we are weary. An old storage egg is never good. Eggs did not drop out of sight in price in time of plenty when we had no cold storage and did not soar to forbidding prices in time of scarcity. They wouldn't now. The time to eat an egg is when it is fresh laid, or as soon thereafter as possible. Cold storage and refrigeration has its place in getting eggs safely into market and in keeping on hand a sufficient supply to prevent a famine in case of checking of shipments from any cause. There are abundant abuses in the matter of storage. Not the least of these is speculation and gambling in storage eggs. Every storage egg ought to be sold as such. Only recently we have seen a storekeeper get three different grades and prices of "fresh" eggs out of the same case from a big packing and storage company, and every last one of these eggs must have been at least three months old.

\* \* \*

Some day we hope to see some better regulation of the price of new laid "henery" eggs based on quality and cost of production. Stop a bit and figure what it costs to produce a dozen eggs. Figure it as close as you can, but don't fail to get included in the estimate upkeep of plant, operating expenses and labor. Well now, how much can you make on yesterday's eggs at 24 cents a dozen? Don't forget that you have to count the loss, or partial loss, of cracked eggs, thin shells and dirties. For selected new laid eggs 50 to 60 cents a dozen isn't such a high price after all, is it? Such a price would be more nearly what a man ought to get for a first quality product, would it not?

\* \* \*

Consider the cost of meats. Four moderately thick "kidney" short lamb chops will cost you 35 to 40 cents in most of our city markets today (and for some time past). That is practically 10 cents per chop. Two chops for your breakfast cost you 20 cents plus cooking, and they are not a whit more satisfying than two poached eggs. Some folks find one poached egg sufficient, and the same person might be satisfied with one chop. Well now. With eggs at 60 cents a dozen your two new laid eggs, fresh and wholesome and with abundant food value, stand you 10 cents, or half as much as

the two chops. Do a little boosting for the 5-cent fresh laid egg.

\* \* \*

Arthur G. Duston writes us: "I have been so busy since November I have hardly had time to read anything. I got time the other night to look over the last three numbers of the American Poultry Journal, and I want to congratulate you on them. It's fine work. I could tell you a sad tale about "hurt" corn, with Duston the sufferer. It's all too true. I thank you for the kindly word about the judging. If you said it I know you

First S. C. Red cockerel and color special at Ohio State Show Jan., 1913. Bred and owned by R. I. Armstrong, 1054 Sullivant Ave., Columbus, Ohio.

meant it. I don't breed loose feathered birds and I don't want to. Perhaps there will be a change. I think what you say about egg farms in February one of the best things I have read for a long time."

\* \* \*

We don't as a rule publish complimentary letters, though they are very welcome and stimulate one to strive harder to do good work, but the above extract from Mr. Duston's letter is too good to keep. We hope he will tell us

about his experience with spoiled corn. Such experiences, well told, help others to avoid losses. When Duston and ourself get together we make a good picture of the "long and short of it" in poultrydom. We have known him a good many years and we value his congratulations not only for the friendliness contained, but also because we know that Duston, besides being a fancier and poultry judge, is also a competent and experienced practical poultryman, with a mighty good foundation of the "know how" in the meat and egg side of the business.

\* \* \*

We take this opportunity to again caution poultrymen to use only fresh sound chick food. Stale chick food is liable to contain spoiled grain. Spoiled grain, particularly spoiled corn, will kill your chicks. At this season of the year the danger from spoiled grain, cracked grains that are blue and green with mould and mustiness, or "green heart" germs, is very great. Spoiled grain kills off many thousands of baby chicks every year at this season. It is poison. Don't feed poison to your little flocks. Don't feed old, stale, or doubtful chick food at any price. It is a whole lot better to be safe than to be sorry when it is too late to mend matters.

\* \* \*

We hope to have ready that open-air house number early in the summer. We have had a strenuous and difficult March with some serious setbacks in our poultry work, due to circumstances we couldn't prevent or control, due to the dishonesty of others and wholly unforeseen by us. Nevertheless we continue right on deck and shall keep busy trying to get out a better journal and to make the best use possible of our opportunities for developing American Poultry Journal Experimental Department. Experiment Station Department will not appear in this issue, but we will try to have a good grist ready in season for the May number.

—o—

The brooder house of Everett C. Rote, of Mohnton, Pa., was destroyed by fire on March 7, together with the incubators containing 3,500 eggs and the brooders and over 1,000 young chicks. The loss was nearly \$4,000.

Pen of Prize Winners

## RUDY'S PERFECTION WHITE WYANDOTTES

SUPERIOR TO OTHERS ☐ THE ACME OF PERFECTION

### Eggs for Hatching

Get the best you can for your money. Don't buy eggs from questionable stock. They may be somewhat cheaper, but the outcome of the hatch will look the part.

Rudy's Perfection Wyandottes are known all over the country as the peer of the Wyandotte.

Get my mating list—free for the asking—and see the reasonable prices at which you can buy eggs from the Grandest Matings obtainable.

If you want to know all about breeding White Wyandottes, send for my Art Catalog. Absolutely the best book of its kind. Gives full information on how to succeed, how to take care of baby chicks, what to do when your fowls are sick. An article on how to fit birds for the show room is worth dollars to any breeder. Send 10c in stamps to help pay cost of mailing, etc.

Geo. H. Rudy, R. 15, Mattoon, Ill.

# Notes from the Southwest

Conducted by H. H. Stoddard, Riviera, Texas

## CUSTOM VS. PROGRESS.

PEOPLE FOLLOW CUSTOM and soon custom becomes an ingrained habit. There is not a saying, a doctrine, a mode of industry, or anything else so absurd or so utterly preposterous, root and branch, but what you will probably keep on following it as a matter of course, once you get in a rut.

Illustration: I suppose the English people and their continental predecessors cut grass with scythes for over two thousand years. Hay was certainly cured and stored in England as far back as King Alfred's reign. The oldest Anglo-Saxon chronicles rescued from the dusty past speak of the scythe, then a rude affair no doubt, and the ancient Teutons and their predecessors in turn, from the half savage times down through the centuries, whenever they kept horses and cattle in cold climates, must have sometimes stacked a little dried grass for winter forage.

Let us inquire how these millions of people used to whet their scythes. I know how I was taught to sharpen my shining blade, and how the necessary operation must have been performed during the two hundred years and more before the advent of the moving picture machine in this country, and by the English farmers before any of them settled here. They turned the point of the scythe directly away from them, and struck with the whetstone in a slanting direction towards the point.

Unthinking custom. Undiscerning habit. A rut followed by innumerable generations of as intelligent men as ever occupied this planet.

The blows should have been struck towards the heel of the scythe. I first found this out by noticing some Hollanders whetting their scythes, the points being turned backward over their shoulders. Most of the Americans who still ply the scythe occasionally, cutting weeds mayhap instead of grass, have not found it out yet. I mowed some rape today and no doubt would have struck towards the point while sharpening my scythe had I not observed the Hollanders.

How many ordinary things we do wrong every day, just as our forefathers did. There are a hundred wrong practices all of us are following. If we include the little fads and foibles the count will be a thousand.

By fads I mean such things as "you must not drink at meals or you will dilute the gastric juices too much." This precept had a great run some forty years ago till some physiologist proclaimed that water if taken merely in obedience to thirst impaired digestion not one whit.

There was another fad that was rife once, namely, that you must not drink between meals. The bewildered listener to the opposite teachings might well inquire, when under heaven may I drink?

### Law of Progress.

It was once the custom for farmers

to kill and dress beeves at home and take the hides to a neighboring tannery, then have the leather kept for the perambulating shoemaker to come and live with the family till little and big were shod. This was called "whipping the cat around the settlement." Later regular slaughter houses were established where hides were furnished to the tanners, who sold leather to the shoemaker who stayed at home, furnished all his materials and customers came to him, there being no more boarding around. Still another evolution. Little shoe shops were set up, where four or five journeymen, and for a wonder ten sometimes, worked together. This was regarded as a wonderful business achievement. Had an industrial prophet appeared and said: "Why, men, you are wrong; that is not the way to make boots and shoes," they would have thought him crazy. Egg farms are in the same shape today. They are no farther along than the little one-horse cobbler shops were. Propheying on poultry lines is extremely easy in A. D. 1913. There is not a large market poultry establishment, or a large partly market and partly fancy poultry establishment, on earth today but what is wrong, decidedly wrong.

The stages that are approaching in commercial poultry keeping are, first, the multiplication of large ranches producing great quantities of absolutely fresh, clean, perfect, guaranteed eggs; in the desperate race to supply the public demand, a demand that grows more

## KEELER'S WHITE WYANDOTTES

### The Aristocrats of the White Wyandotte World

They combine size, shape, style, head points and, above all, the power of reproduction, having been line and pedigree bred for the last nineteen years. They possess the best blood lines in existence.

### The World's Greatest Strain

## EGGS EGGS EGGS EGGS EGGS

For the season of 1913 I have made sixteen of the grandest matings that have ever graced Keelersville. They contain most of my prize winners at Topeka, Kansas, December, 1911-12, and the best birds raised the past three years. Sons and daughters of these great birds. They are bred right and mated right to produce the winners at America's largest and best shows next season the same as they have done in the past. My 60-page 1913 art catalogue of America's finest White Wyandottes, describing the sixteen best matings in America, free for the asking (stamps accepted). Eggs, \$5 per 15, \$9 per 30, \$14 per 50, \$25 per 100.

FIRST PULLET AT TOPEKA, KANSAS, DEC. 1911

Keelersville, Chas. V. Keeler Proprietor and Mgr., R. 11, Winamac, Ind.

and more urgent all the time and has been growing for forty years that I know of, and is today farther from being overtaken by the supply than it ever was before. Why, my friends, it was not so very long ago that our cities were comparatively small, and the modern immense hotels, divided into the metropolitan, mountain, seaside, tourist, and so on, were utterly unknown. Even a modern strictly first-class restaurant was unheard of. There were resorts called "eating houses" when I was a boy; that was all. That's the name they went by. Great Scott! Men from a dog fight wouldn't enter 'em now.

The billion dollar industry has been growing, its magnitude not recognized till lately, and now within the last year the literal rottenness as well as magnitude of the egg trade has been discovered, and the importance of applying the pure food law has been learned; one of the best laws that was ever on the statute books and without which the public would ere now have been still more flooded with all sorts of adulterated or decayed food.

What an enormous loss has been going on in the egg trade the papers have told us.

#### What a Shame

that while thousands of hard working people find it impossible to make their earnings feed them properly, such an atomable gap should exist between the producer and consumer of such an important staple article as eggs!

The strong arm of the law must control transportation and distribution, and the sixty poultry papers, and poultry columns in innumerable farm papers must teach line on line and precept on precept, and schools, public speakers,

the movies and the railroads with their cars of instruction must all co-operate. The whole matter of furnishing the great American public with poultry products is wrong as now practiced. Manifest destiny points out that great changes are on the way.

As we said the first evolution will be the multiplication of great commercial farms. Cases of guaranteed eggs at wharves and railroad stations, plenty as leaves in the valley of Valambrosa, will stare you in the face. The excellence of the contents of these cases will be like the virtue of Caesar's wife, absolutely above suspicion. There is no article of food so peculiar as eggs, from the fact that ordinary appearance gives no clue to quality. The brand, the real Simon-pure brand, will consequently have a value beyond the brand of any other article of food.

Well, the big poultry farms will make money, those badly located excepted, for there is no other industry where a good location has such tremendous importance. The result will be a further increase of their number. You can't make money in anything very long before people find it out. It has been said that scandal travels on the wings of the wind, and that may be; but news of money making travels with the speed of greased lightning. Eager eyes will seek for the best place to operate and there is but one best place, and I am penning these lines at not far from the exact center of it. Already moderate sized poultry plants are started here, and the owners are surprised at the easy money they are making, while I laugh and ask them, "Didn't I tell you so?" With feverish haste they are hatching as fast as they can, so as

to double and quadruple their layers. I am even interviewed of late by wealthy parties who propose "going in big."

At the time of my earliest experience here I could not find a man who had ever received a case of guaranteed yesterlaid eggs in his life. I do not say that there were none such, but do say that on applying to the steward or "buyer," as they called him, at hotel after hotel, I could not hear of any receipt of any such eggs, and I was the first to ship

#### Guaranteed Eggs

at the express station here. Now various parties bring their thirty dozen cases till the expressman actually looks a trifle bewildered.

Up to now shipments are, so far as I know, confined to hotels, restaurants and boarding houses, all these of the high-toned sort. At least one dealer I know of, who caters mostly to wealthy customers, wanted yesterlaid eggs and offered a price considerably above the ordinary but was turned down because the hotel folks came across handsomer. The new big hotels, like the magnificent one just completed at Corpus Christi, will demand more yesterlaid eggs than the Southwest can supply, but this state of affairs cannot last forever. I know of two owners of big tracts of land who are looking in vain for capable managers of large scale poultry plants, and are determined to strike while the iron is hot as soon as such men can be found. When they ask "where are the capable managers?" echo answers. Northern experience won't apply here worth a cent.

In time poultry ranches will be so big and numerous that export trade will come and with it all the ups and downs

# Byers' Strain Orpingtons

## BUFF, BLACK, PEARL-WHITE

If you don't know of me and my responsibility, ask the Editor of this Journal. Then get my 1913 Catalog.

I have Won at the largest Shows past 14 years in Orpingtons; Have judged them from New York to Los Angeles; Bred them that Won yearly from Coast to Coast. EGGS from the best Special Matings possible \$10 per 15, \$18 per 30, \$50 per 100. (Infertiles replaced free.) Utility Eggs, \$15 per 100; \$60 in lots of 500.

Now, I will wager that Eggs purchased from my Special Matings at the above prices will produce more high-grade birds than Eggs purchased elsewhere at the same or a higher price—number of chicks reared considered. Moreover, I am going to guarantee to please every reasonable customer who purchases Eggs from me this season. I do not mean to infer that there are not other good birds in the country, but I do assert that the Eggs I WILL DELIVER at my price will produce more high-grade specimens than those purchased elsewhere, as above mentioned.

There are many choice birds in the yards of breeders, but the fellow who owns them without the knowledge of properly mating them handicaps himself, as well as his customer, although he may maintain and believe that he is right. I have gradually, by scientific experience and research, developed an exceptional and indispensable knowledge along this line. That's why I have been urged to place the Orpington awards at the largest Shows of our Country. But I am not in the judging business. My business is to breed one breed right and furnish Orpingtons and Eggs of the highest grade and at attractive values consistent with their blood lines and Standard qualities, and I have been doing it for 14 years, and I will be at your service in this capacity for years to come. In view of the above I am going to merit your patronage, if I get it.

BUFF

that appear in every big business that combines the three features of production, transportation to distant points and sale.

It will be a long time before supply of choice eggs will

#### Overtake Demand

but that time will surely come. Then it is that the poultry ranch that is best located and best equipped with labor saving devices will live and prosper while its inferior competitors go under.

Just here is an important consideration. During all the long time which will elapse before supply overtakes demand the well equipped ranch will make two dollars where the poorly equipped makes one. The proprietor of the first mentioned ranch will witness from easy street the first commercial storm that arises.

A great part of the labor saving on top of that made by going to the best place may be outlined as follows:

There must be no watering whatever. On the range, in the yards, in coops for breaking up sitters, in hospital, brood coop, hatching department, everywhere, even when a solitary bird is confined, water must be supplied automatically. Milo Hastings was right when he said that after watering without labor, either by never failing stream or pond, or by pipes, had been shown, the keeper making poultry a business, who would go on in the old way would be capable of catching driftwood on shares.

Poultrymen are looking into this water business all along the line, and finding that nothing beats artesian wells if lakes or streams are not available. For raising guaranteed eggs which must be kept very clean, the wells beat the other methods. Water by pipes does away with the mud that is sure to be found more or less at the margin of streams and ponds, which, adhering to the birds' feet, will sometimes reach the nests and soil the eggs. Rains being enough trouble of this sort without having an extra source added. A very small hole in a water pipe from which water constantly drips is the proper caper. But be sure and have a very small cup for the water. A big affair will accumulate sediment at the bottom while the cup will keep clean. Of course the cup must stand on a box or block of wood or stone or something or other so that scratching dirt in may be prevented. Never scrub the cup from year's end to year's end if it is contrived right. Fasten it to stay. Dash water on violently, if you want to, occasionally to clean it, or, rather, pour it on from as great a height as convenient. But this is wholly unnecessary. There may be a little green slime in warm weather but don't be scared for it is as innocent as a baby or a lamb.

Actually millions of dollars' worth of time is squandered scrubbing poultry drinking vessels throughout the length and breadth of this fair land. But "the dirt, the dirt," the writers say, and their "health." Oh, yes, the precious health of a bird that dabs in dirt all day, and in reeking dunghills if it can find them, and in the most repulsive filth it can get at, in a wild state, following deer and other animals far for the purpose, and constituted by nature expressly for that habit. Verily, a dunghill fowl. There may be in the water a bit of dirt from the bird's bill, while it is scratching in acres of dirt half the time. "Drinking vessels clean," and "bowel trouble," and "don't overfeed," and all that lingo

over and over, make me tired.

But the drip, drip, drip all night will make mud worse than that at the pond's edge you say. Well, if you cannot contrive to get around that you are no Yankee and I won't tell you. In this matter of watering the Southwest, where there is no freezing, permits a tremendous saving of time.

The six great things where labor saving must be sought are hatching, rearing, feeding and watering, providing fresh green stuff and gathering eggs. No establishment combines all six as yet. In fact, my good reader, you will hunt pretty much all over this great and glorious land to find a poultry plant that accomplishes any three of them, or even two, with the very

#### Minimum of Labor.

That is why I said that commercial poultry raising is today in about the same stage that the shoe industry was when half a dozen men in a small shop made boots and shoes by hand.

All feeding, nearly, must be automatic. The amount of feeding that is not affected by mechanical means must be so small as to be negligible. The moving of every kernel of corn and

every ounce of bran from ear to store-room and thence to the birds must be managed with the very minimum of labor. To cite one little point: Would you shovel grain into a wheelbarrow when it is necessary to use that conveyance? Nay, nay! It should run in. And not by hit or miss but by a double stop arrangement in the chute which discharges the precise load and works a cut off instantly, and there's your cargo at a snap and not a kernel scattered, the wheelbarrow being built on purpose. Another little point. Did you say rats? Narrow, boarded up, dark passages located all over the sap works with entrances rat size, and water, good nesting material and everything luxurious. Food not reached except by the rodent discharging an electric current that puts him out of mischief. Lid contrived for the very maximum of convenience in placing more bait and removing the dead to be used for chicken food.

All hatching to be done by ———; here I stop, for have been reminded of the Arkansas fiddler who always played on one string. Please wait awhile. I have entered the campaign to stay.

## America's Largest Line of Incubators and Brooders

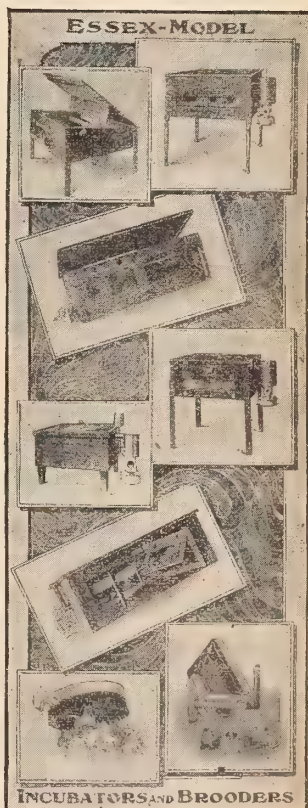

Your Choice of 19 Sizes and Styles \$2.25 to \$48

Some people think Essex-Model Incubators and Brooders might cost more because they are Superior Machines and cost more to build. Don't get a wrong impression. It is true they are better, but our profit is smaller than others—and so you get the benefit of High-class machines at low prices. You get the best machines on earth at the price you would have to pay for inferior machines; so surely you should choose the best. Our Catalogue illustrates how they are made, and proves that they Hatch Better and Brood Better.

Mr. Essex offers you the advantage of his Quarter Century of experience at no cost to you. Let him Start you Right. It is half the battle.

W. D. HOLTERMAN, Fancier

Box A, FT. WAYNE, INDIANA

Now in regard to the egg-gathering branch of labor saving; this matter is exceedingly important, and in a climate where eggs must be gathered often a decided advantage is found in the use of

### Waist-High Nests.

Many years ago I advocated having all nests, whether of layers or sitters, located so that eggs could be gathered, fresh litter put in, the hatching business managed and all such affairs worked with the maximum of both ease and celerity, and published a cut of waist-high nests.

Friend Root, in his sterling periodical, *Gleanings in Bee Culture*, published a few months ago another picture of such nests, his accompanying text declaring that he hated to bend his back if he could help it. But the avoidance of irksome position or motion is only a part of the story. The time spent in bending over and then straightening up again, trifling as it may seem, is very great in the aggregate in a large establishment. It is by reducing labor to the minimum in every process and adding altogether that the ne plus ultra of cheapening production appears.

When the advantages of Texas for poultry raising and egg farming become more widely known people will come here from all parts of the Union to make these branches their sole business; as they now go from other states to California for that purpose. The poultry future of the

### Great Southwest

staggers the imagination. Just at the time the great growing cities cannot longer be supplied with eggs by the farmers, and so demand large poultry plants, and just as the method of conducting such plants profitably is found, lo! and behold, a district is discovered where a third of the capital and a quarter of the work heretofore necessary will give a greater yield of stuff where-with to feed poultry than has been possible during the last forty years. The world knows little of the incomparable productivity of certain soils in the Southwest, warmed by a semi-tropical sun.

Regarding the ease and certainty of production of poultry feed here, the popular ignorance is so dense it could be sliced off with a hay knife.

It has been claimed that the belt of Cheap Grain Production extends from Dakota to Texas, and this was said with reference to such staple grains as corn, wheat and oats. If it is claimed that the northern part of Texas rather than the southern can claim to be within this belt it should not be forgotten that the Southwest is the paradise of the cane family and that two or three members of this group yield good poultry grain which is not generally cultivated to advantage as yet; but the power gang plow and the auto-cultivator will change all that, the lay of the land and the texture of the soil being perfectly adapted to their use, and then such a volume of Egyptian wheat will appear as eye has not seen, ear hath not heard of and the mind of man hath not conceived of in its vastness.

It is not generally known that just south of the great corn belt the zone begins, where, although corn can be grown, it cannot be done to as great advantage as farther north. In Oklahoma, Arkansas, Missouri, Kansas, Nebraska, and so on, cane can be grown, but not to so great an advantage as farther south. The cane group contains

the ribbon cane used for making sugar, the sorghum cane for syrup and then for livestock, three other canes known as the

### Non-Saccharine Canes,

the kaffir corn, milo maize and Egyptian wheat. The stalk and leaves of the last are useless for forage, but the seed is extremely valuable for feed, the first gives the best forage and the poorest seed, while the second yields both seed and forage of medium quality.

It is the seed of the Egyptian wheat that is the banner poultry food of this part of the country. It analyzes much like Indian corn, and by small size of kernels answers for chicks as well as for grown birds.

Talk about the "corn belt." Of course, in some parts of the West, by the listing method, and the harrow followed by the four-row cultivator, wonderful results are achieved, for sometimes one hundred and fifty acres of corn can be raised and marketed by one man in a year. But in the Southwest the rainfall, soil and lay of the land allow the same implements to be used for raising Egyptian wheat and this can be rapidly harvested by a header. When one crop is cut another springs up from the stubble and matures a heavy crop of seed, no labor of preparing ground and seeding being involved. The book speaks of "seed time and harvest." Here is a seed time and then

### Two Harvests

the same year. Green stuff growing the year around. Equipment for fowls ten cents per head against a dollar or upwards at the North. No fighting mites and purifying buildings and roosts, providing dusting places, thawing drinking vessels and shoveling snow. A climate that promotes health and heavy egg yield. Harbors near, and all Christendom for a market. Cheapest rich land in the United States and cheapest grain in the world.

## NOTES FROM ENGLAND

CONDUCTED BY

MISS CAREY, TOYNTON RECTORY, SPILSBY, ENGLAND

### THE EARLY LIFE OF EXHIBITION BIRDS.

NOT LONG AGO a curious discussion arose in the English fancy, brought about by the awarding of a cup to the breeder of the best bird in the show, as to who is the breeder of a bird.

The bird at the show referred to had come out of a purchased sitting of eggs, and the question was whether the man who bought the eggs could claim to be the breeder of the bird. Correspondence for and against ran on the subject for many weeks, many breeders affirming that only the man who held the breeding stock could claim to be the breeder, while the poultry club council and other breeders held that the man who had hatched and reared the bird to perfection had an equal claim to the title. And such indeed would appear the only just solution of the problem when one comes to consider what ruination or perfection of the progeny of a pen can be attained between the date an egg is placed under incubation and the time of maturity.

One man may take the eggs and hatch out strong healthy chicks under the most perfect conditions, grow them from start to finish without check, produce an easy winner or two, mate them properly and

from this fine vigorous stock perpetuate the breed to greater perfection. The other man will take the same eggs, hatch under the worst conditions a few weakling birds, grow them badly, allowing many checks from chill or overheating, bringing to maturity a few sickly birds with plumage in bad condition from exposure and being poorly fed. These birds are naturally not fit for show purposes and can produce only weaklings in off-spring.

In view of these facts the man who hatches and rears and carries forward to perfection or ruination a race of birds another may have originated, is yet equally the breeder with the man responsible for the production of the eggs and the possibilities of life which they held.

It is the realization of the fact that in the hatching and rearing of stock lies to a very great extent the breeding and perpetuation of a strain, for better or for worse, that induced me at the present time to offer to young breeders a few

hints on the necessary care and attention of growing stock, and old breeders who have been through the mill learning, by experience perhaps none too pleasant, will, I feel sure, be with me if I go over old ground.

Now the one principal aim in the mind of the would-be prize winner must be, how can I hatch and grow those chicks so that they do not stop growing for a single day? First of all let us glance at hatching operations, and the natural method of incubation is decidedly the best, giving every form a better chance to develop, resulting in a strong well-born chick. Provide a comfortable, roomy nest in a well-ventilated place and arranged so the hen can be confined. Make a comfortable bottom of sand or earth, rather saucer-shaped, so the eggs will not roll away to the corners, yet not too concave, and cover lightly with hay. Dust the hen well with a good insect powder and place her on the nest with a few artificial eggs. If by the next day she is comfortably settled place the sitting of eggs under her. Several hens should be set at the same time when it is possible to do so, and after the eggs are tested on the seventh day the fertile eggs may be given to the hens showing good motherly qualities.

## Poultrymen Have Confidence In The Globe Incubator---

because all the value---all the invested money is put into the machine itself. We put all the money in the machine. We have never made a statement that was unsound or shaky. Everything we say about the "Globe" is truth---positive fact backed up by seventeen years of a wonderful success. Don't be misled by those low priced machines. You know it takes a great deal of yelling to sell anything that's below standard. We have never had to advertise in that way in our life. The Globe's reputation sells it. It is a standard machine---one that you can depend on.

Thousands and thousands of both men and women have been "stung" by purchasing a machine that looks nice in the picture because the man selling it shows a nice big photograph of himself. It is interesting to note that every user of the "Globe" (and then there are thousands and thousands) is today making money just as fast and practical as it is possible to do in the poultry business. And the best proof that our Incubator principles are scientifically correct is the fact that we make Infant Incubators for physicians. Read our large 1913 Poultry and Incubator Catalogue and see what we have to say about our Infant Incubators. This big book has hundreds of testimonials. This is a mass of evidence---solid facts that are the best guide you can obtain. We want you to read them over. See how enthusiastic these people are about the Globe Incubators. Let them tell you in their own words how successful their poultry business has been since they used the Globe Incubator and Brooders. See below for further information about this catalog. Here's a few further words about these wonderful machines and what they are made of.

Send your order at once. Don't miss this remarkable opportunity. And remember when you buy the Globe Machine you are getting real value.

### Poultry and Incubator Book

Send us 15 cents for our big complete book on Poultry, Incubators, Brooders, Poultry supplies. We will save you many dollars. It has more real information than a whole library of Poultry books. It shows everything that is required to make a poultry farm a success.

C. C. Shoemaker, Box 605, Freeport, Illinois

## The Standard 200-Egg Globe, \$18.00

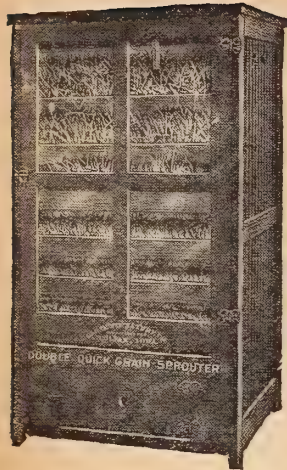

This is without doubt the most carefully built incubator made. It is made of specially selected lumber---each piece picked. Has a most superior hot water heating system and this system is exclusive in the Globe. The pipes that carry the hot water through the egg chamber are made of regular gas steel tubing so that they are absolutely airtight and water-tight. Insulation is the most thorough ever found in any machine. Regulation system is controlled by what is known as the Compound Double Hydro Valve. Tanks, trays, lamps, etc., are of the finest model and best material obtainable. Can be run with kerosene, any kind of gas or electricity. And all this most perfect construction makes it possible for you to get those high percentage hatches for which the Globe is famous all over the country. This is the incubator that will make you money. This is the incubator that has the real value behind it and not a pretty photograph of somebody.

**200-Chick Globe Brooders \$11.75** After you have your little chicks all peeping about looking like good money, don't chance them to some brass band brooder. Get them in the Globe and you're pretty sure of cashing in at a profit every single time.

This 200-Chick Globe Brooder has all the basic principles that has made the Globe famous. Has the over-head system of hot water pipes, contains two compacts---one for feeding---one for nursery. Ample light and ventilation. The most efficient lamp on the market. Will never rust. The whole brooder is made to stand the racket.

**For 30 Days Only Combination Price \$23.50** If you buy within the next 30 days you can get one of these perfect 200-egg size incubators and one 200-chick brooder, only \$23.50.

## Eggs Sprouted Oats Eggs

To meet the great demand for eggs this spring—eggs of high fertility for hatching—feed the hens something green, and there is no green feed the equal of the living, vitalizing, growing, Sprouted Oats.

Eggs of a high per cent of fertility means chicks of great vitality—chicks that live and grow.

To force chick growth, to bring the young pullets to the laying stage, to develop fries and broilers quickly, feed the chicks germinated wheat.

To get great quantities of Sprouted Oats and germinated wheat quickly, buy a

### DOUBLE QUICK GRAIN SPROUTER THE PERPETUAL POULTRY SILO

A veritable hothouse, growth-forcing machine. Makes two to four bushels of feed from one of grain. Soon pays for itself in the feed it grows and the increased egg yield. Sprouted in 24 hours and forces growth of 2 inches and more daily. The Double Quick is the original grain sprouter now three years old, several thousand being in use in every part of the United States and Canada, and is endorsed by hundreds of users. Made in six sizes from a few hens to 1,000. Send for complete booklet on the grain sprouters and sprouted oats.

Close-To-Nature Company, 38 Front St., Colfax, Iowa

## Carter's American Dominiques

The Great Sensation of Boston, 1913, Show. For five consecutive years they have cleaned up this great show. Boston, 1913, winnings: Cocks, 1-2-3; hens, 1-2-3; cockerels, 2-3-4-5; pullets, 1-2-3; pens, 1st. No show record equal to mine. No birds better bred for both utility and fancy. Two hundred years or more of breeding has fixed the great egg and meat producing qualities in this warranted breed. I have for sale the best lot of birds I ever owned. Eggs for hatching.

International Stock Food Co., Savage, Minn.

Let the hens have ten minutes to half an hour a day off their nests, according to the temperature of the weather, providing them with all the food and water they care to consume, and an opportunity to exercise freely and dust themselves. Should a hen prove restless, especially at the start, discard her, if possible, as always the hen that sits steadily and close to the eggs invariably gives the best results.

When the chicks are twenty-four hours old remove to comfortable quarters, where the chicks may have an outdoor run, preferably a grass run, making sure that the mother is hovering them properly. The first day or so the chicks do best if confined, but after that they may be allowed access to the run. We keep our chicks bedded in sawdust, which is changed once weekly and kept clean at all times. The scratching part is bedded in chaff, in which seeds and small grains are scattered from the time the chicks are three days old. A drinking fountain is also provided and a tray for grit and fine charcoal. We feed five times a day for the first three weeks and after that four times. Up to ten weeks chick seed, ground oats and milk, biscuit meal and milk forms the chief diet, with an occasional rice pudding made with milk and dried off crumbly with ground oats for a mid-day feeding. Where there is no grass, sprouted oats chopped fine should be provided. After a few weeks chick seed may be replaced by cooked wheat, oats and kaffir corn or other suitable cooked grain, which is much more digestible, and when dried off with a little meal can be scattered into the chaff and is a very economical feed.

If the birds do not appear hungry at feeding time omit the feeding until they are eager for food. The eyes of the chicks should always be bright, the limbs strong and firmly put down, as any dullness of eye or weakness of limb needs prompt treatment on starvation diet for a few times and later a diet less rich and less frequent.

The chicks should be moved frequently to fresh ground, and after three or four weeks allowed free range wherever it is possible to do so, watching carefully for the first few days that they do not go astray.

Personally, I pin my faith in chick rearing in warmth in brooding, fresh air, exercise and that rice pudding at mid-day, and following this method never have a case of leg weakness and rarely any of the little ailments young chicks are so constantly subject to.

In brooding chicks, overheating is more often than anything else the cause of trouble. Chicks to do well must have warmth and likewise fresh air. Beginning about the middle of April here we leave the lids of coops slightly open at the top, just enough to carry off the bad air. Shade should always be provided during heated terms.

See that the chicks have ample protection from rain and are not allowed out in wet, stormy weather. There should be equal protection from sun and excessive heat, as it retards growth and development. It is a good plan to face coops north during the hot weather, making them as cool as possible. A double roof with a space of four inches between is a splendid aid to even temperature during the hot weather.

A. A. Larson, city treasurer of Aguilar, Colo., claims to have perfected a strain of White Leghorn chickens with teeth. Next!

Prince T. Woods, M. D.

Q. (1) What properties does Venetian red, the paint powder such as is bought at paint stores, possess. A friend of mine used some in the water for chickens and I tried it and it seemed a great tonic. Is there anything dangerous about it, and is it an egg persuader?

A. (1) Venetian red has been used for many years as a poultry tonic. The name is only a trade name and in buying paint powder called Venetian red you cannot always be sure of getting the same thing. The kind used as a poultry tonic is a red oxide of iron. It is not soluble in water and its tonic value is much over-rated. Do not consider it of any special value in promoting egg production. If you want to give them iron oxide try saccharated red oxide of iron, which is soluble in water and is much better than common Venetian red. It can be obtained through your druggist for 60 to 75 cents a pound. One teaspoonful of the powder is about right for a gallon of drinking water. Common name for this powder is soluble iron or iron sugar.

Q. (2) I have two very active cockerels (White Orpingtons), each with a pen of nine females. In each pen the feathers are broken off neck and back of one female. How can this be prevented? Did I have too few females? I have now separated the cockerels and allowed females to run together, alternating the cockerels daily.

A. (2) You can't prevent it and don't want to if you are breeding the birds. The hen with broken feathers is probably a favorite in the harem; that is all. When a large percentage of the eggs from the flock are coming fertile, in the spring of the year, there are always a lot of females with back feathers pulled out and broken. Look out for sharp toe nails and sharp spurs on cockerels. These may cause torn backs and loss. Keep edges and points of male's toe nails blunted to prevent torn backs.

Q. (3) When you alternate two cockerels daily or weekly are twenty females too many for them? If so, how many can they serve and have eggs fertile. Which is better to alternate daily or weekly?

Chicago, Ill.

C. W. G.

A. (3) At this season one husky cockerel ought not to have any trouble serving twenty hens. If you alternate

from the flock in the summer these birds put on new plumage and looked as trim and neat as big pullets.

## Number of Eggs During Life of Hen.

Q. What is the average number of eggs that a hen will lay during her life?

Elkhart, Ind.

O. W.

A. It depends on the life of the hen. On plants where the life is seldom over two laying years 300 eggs would be a good average. Dr. Pearl of Maine Experiment Station says that probably few hens would lay more than 400 to 500 eggs if allowed to live out their natural lifetime, and he states that there are records of "1,000-egg" birds in existence. Some breeders have

One of the many breeding yards of the Co-operative Breeding and Hatching Co., Tiro, Ohio. This company will ship over 12,000 day-old chicks each week this season. Their great hatching system is one of the wonders of the century.

better do it daily. It would be better to give each cockerel ten hens in a pen of his own. You were all right at the start and it was a mistake to make a change. You can't rush birds in the breeding season and expect to keep the plumage trim and neat. Last season fully 80 per cent of our breeding females had the feathers worn off backs and from back of heads in March, but the eggs ran fine in fertility and hatchability. After the males were taken

claimed 600 eggs from one hen in four laying years.

## Off-Color in White Leghorns.

Q. About a year ago I bought a pen of two hens, two pullets and a seventeen months old cock from a party who represented them to be thoroughbred stock. My birds are all white, no brassiness, with the exception of two cockerels, raised from above stock, that have a dozen or two feathers on

back wings that have a brown tinge like sample enclosed. The eggs from original pen were pure white, but one pullet lays an egg that is tinted. I enclose a sample of shell. Do you think these things indicate a cross or would the trouble be likely to come from inbreeding?

Cumberland, Md.

A. H. K.

A. Trouble is not due to inbreeding. It may possibly be the result of mating two unrelated strains or it may be result of an outcross a few generations back. Would eat the cockerels and the pullet and would breed the good ones and note further developments.

#### Limberneck.

Q. (1) Has anyone ever demonstrated that carrion, which gives

chickens "limberneck," could be made innocuous by heat?

A. (1) We have no record of such.

Q. (2) How long has limberneck been known?

A. (2) It is mentioned in some old books that were published seventy-five or more years ago.

Q. (3) The assumption is that the disease is simply ptomaine poisoning. If this be true, boiling would not prevent the disease; whereas if it is due to a germ heating to a comparatively low temperature would prevent it?

A. (3) "Limberneck" is a symptom only. It occurs from several causes. Fright, prolonged fighting, injury to head, neck or back sometimes result in limberneck. The symptom also occurs where there is intestinal irrita-

tion, either from "germ" poisoning, mineral or ptomaine poisoning and from worms.

Q. (4) Do any animals besides dogs and hogs acquire this paralytic disease which is so destructive to poultry?

A. (4) We have no data on the subject.

Q. (5) Does it ever occur outside of fly-time?

A. (5) It does. We have noted cases at winter shows.

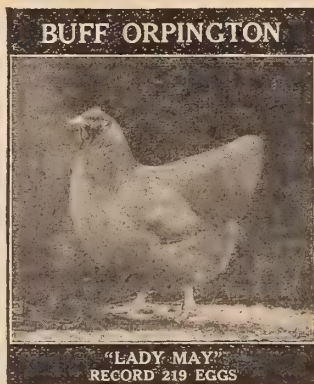

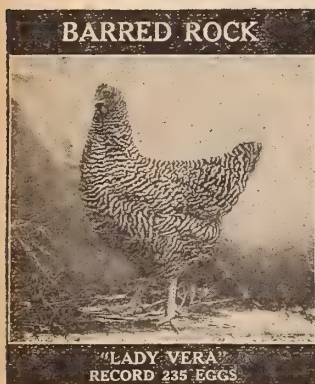

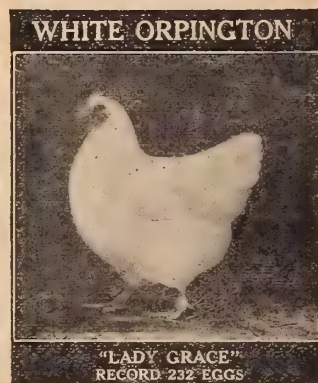

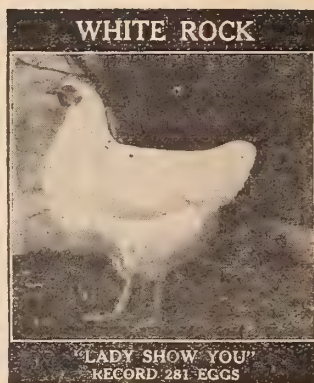

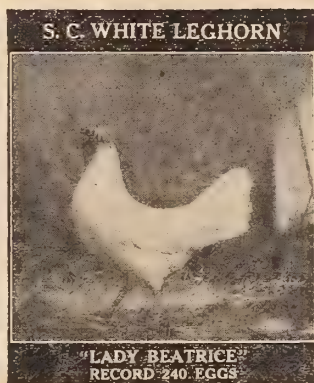

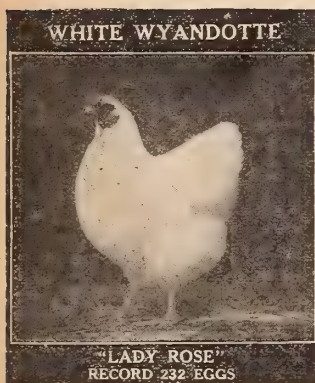

Q. (6) My observations embolden me to say that it is not putrid flesh, as such, that causes the disease, but the maggot contained in it.

St. Louis, Mo.

Dr. E. W. S.

A. (6) We will be glad to have a summary of your investigations. In our opinion neither the putrid flesh nor

## M.F. & H. 200 EGG STRAINS M.F. & H.

You cannot buy, regardless of price, stock, eggs or baby chicks that will produce the profits that are being produced by Midlothian Strains. Midlothian Farms and Hatchery is today the largest and most profitable poultry plant in this country. We can supply you with:

### EGGS

from trapnested stock with record of 200 eggs or better, 30 cents each  
from trapnested stock with record of 144 to 199 eggs, 20 cents each  
from the same blood lines as trapnested stock, 10 cents each

### STOCK

Pullets from trapnested stock with records of 144 eggs and up, at \$2, \$3, \$4 and \$5  
Hens with individual records of 144 eggs and up, at \$6, \$8, \$10 and \$12 each  
Hens from trapnested stock without individual records at \$3 and \$4 each  
Cockerels from trapnested stock with records of 144 eggs and up, at \$4, \$6, \$8 and \$10 each  
Cocks from trapnested stock with records of 144 eggs and up, at \$5, \$8, \$10, \$12 and \$15 each

### BABY CHICKS

from trapnested stock with records of 200 eggs or better, 50 cents each  
from trapnested stock with records of 144 to 199 eggs, 35 cents each  
from the same blood lines as trapnested stock, 20 cents each

We are now booking orders for eggs and baby chicks. Booking your order now assures the delivery of eggs and baby chicks when you desire them. You may send us your order, enclosing \$5 as a deposit, and send the balance five days before your order is to be shipped. Book your order now. Write for catalogue. 800 pullets trap-nested annually.

**Midlothian Farms & Hatchery**

John G. Poorman  
Manager

**R. 5, Tinley Park, Illinois**

the maggot, as such, causes the trouble. Fowls eat putrid flesh and escape trouble. They eat maggots and escape trouble. Maggots that when fresh from the meat cause limberneck when eaten, if allowed to "clean" in bran or sand may be eaten by fowl without causing any trouble whatever. Isn't it possible that other toxins or toxic germs in the maggots or putrid meat, or both, may be the root of the trouble?

#### Broody Hens with Bare Breasts.

Q. I am writing you in regard to the condition in which I find about half of my hens. Though they seem to be in normal condition, are laying fine, and even want to sit, I find that they are losing all of the feathers directly between their legs. I should like to have

your opinion as to the causes of this and also a remedy. Would you advise letting them sit? I am afraid they would not be able to keep the eggs warm.

Beardstown, Ill.

A. P. R.

A. There is nothing wrong with your hens. Broody hens, or hens about to become broody, often pull breast feathers to line their nests. A broody hen with a bare breast often proves the best sitter. Don't borrow trouble, just observe nature and use your own "thinking cap."

#### Feather Pulling and Sore Head.

Q. My fowls are scratching at their necks and pulling all the feathers out. The skin turns red and sometimes torn and bleeding. Some of them have sore head. I have dipped them two times

in Kreso dip but it does not seem to cure them though it helps. What is cause and cure?

Lubbock, Tex.

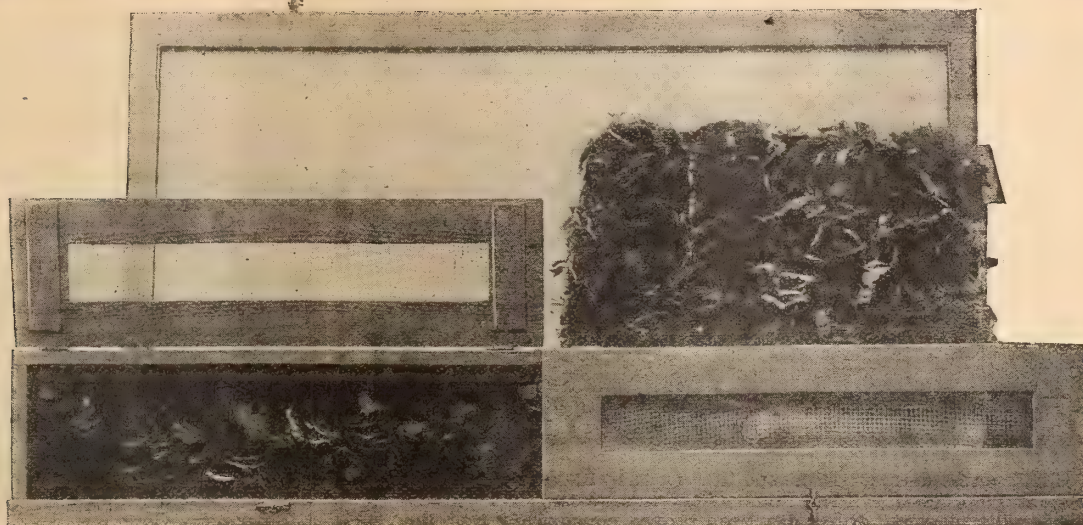

F. W. B.

A. You probably have a combination of troubles, sticktight fleas, sore head and feather pulling. Get your fowls out of poultry houses and provide wire enclosed roosts in the open. See that roosts get plenty of sun and that they are moved occasionally. Don't let the fowls run in dark, shady places or under buildings. Use the Kreso dip again when you move the birds. Shortly after the dip dries off apply compound sulphur ointment to the affected parts.

#### Hatching with Hens.

Q. I am much interested in the way you hatch chicks by having a battery of

## M.F. & H. FEATHER BROODER M.F. & H.

TWO-COMPARTMENT 150-CHICK CAPACITY

## Fellow Poultrymen

Your Success, Like Ours, Depends Entirely  
Upon the Stock We Raise

Regarding our Feather Brooders, will state that they are entirely responsible for the great success of our farms. We have used the leading makes of oil brooders, also hot water brooder systems, and have found in them only partial success. They meet requirements for a certain part of the year, but are not adapted to all conditions that prevail throughout the brooding season.

In the Fall of 1911 we disposed of all these different makes and systems, and since then have raised all chicks under feathers, and have raised all our chicks at all the times of the year successfully. Since using feathers, we would not use anything else as a gift.

Your success, like ours, depends upon raising stock, and if chicks have a poor start, they never will develop into strong, healthy birds as chicks raised under ideal conditions. We find in our brooders perfect ventilation and all conditions similar to the hen raised chicks.

In my twelve years' experience on some of the largest farms throughout the country, I have never in all this time seen raised a greater percentage of chicks than I have seen during the season of 1912 on Midlothian Farms; have never seen healthier chicks, nor had pullets laying earlier than the chicks we raised under the feathers.

We do not claim this brooder an outdoor brooder before June 1st. It must be operated in a room where there is a floor temperature of 60 degrees during the day time. The temperature can fall to 40 degrees during the night and the chicks will be perfectly comfortable. Of the 10,000 chicks we raised last year, not one case of White Diarrhoea developed.

We are perfectly willing to send you a brooder and all that we ask is that you follow instructions. These instructions are more simple than any that accompanies other makes of brooders. If you do not find a decided increase in the growth of chicks and other conditions as herein represented, you are at liberty to return the brooder and we will refund the purchase price.

Prices—Double Compartment Brooder, 150-Chick Size, \$15; Single Compartment Brooder, 75-Chick Size, \$9

Write for M. F. & H. Feather Brooder Circular

NOTE—It is our desire to establish agencies throughout the country, and we would appreciate the name of your local poultry supply dealer.

\$8.00 for 30

MATING LIST ON APPLICATION. Address

Henry Steinmesch 220 Market Street  
ST. LOUIS, MO.

I have 2 pens of imported English Silvers, one Cockerel mating, one Pullet mating. Will sell a limited number of Eggs from either of these two pens at \$19.00 for 15.

## More Fertile Eggs More Vigorous Chicks

IT HAS been demonstrated time and time again by Experiment Station tests and reports—that Meat Poultry Food is necessary for the greatest fertility of eggs. It has also been proved conclusively that the chicks from flocks fed with Darling's Meat Scraps are sturdier and more hardy than those of flocks nourished by grain feeds alone.

### Darling's High Protein Meat Scraps Contain 55% Protein

and are the highest grade product on the market. Every ounce of Darling's Meat Scraps is absolutely fresh. Trimmings from roasts and steaks sold over the butcher's counter are picked up by our wagons the same day and cooked that night. In short, Darling's Meat Scraps are made from the fresh trimmings from the edible portion of the carcass. This gives uniform quality and sweetness.

They are low in fat, and fine ground as recommended by both the Experiment Stations and practical poultry raisers.

Darling's Meat Scraps cost no more than goods of lower protein content. Insist upon Darlings 55% Protein Meat Scraps at your dealers.

**Every Poultry Man should send for a free copy  
of our book on poultry feeding.**

This book is replete with timely, helpful and specific suggestions and hints on the care and feeding of poultry that you should know and profit by. It tells how to increase egg production and egg profits. Whether you own 25, 50 or 500 fowls, you will be tremendously benefited by reading and studying this book. Write for your free copy today. nests with sitting hens all in a row, but do not remember reading what you do with the chicks after they are hatched. I would like to know if you put the hens in brooder houses with the chicks or let the hens with their broods all run together. What is the best way to handle them.

Burbank, Cal.

D. L.

A. We like nests for sitters built in batteries of 4, 6, 8 or 10 nests. The nests made with wire netting bottoms to rest directly on the ground and made with a roof to shed rain and a wire door to keep hen confined if desired. Pine needles or soft hay is used to make the nest. A wire fence is used to enclose the run in which nests are placed and they are so placed that they are sheltered from direct sun.

The chicks remain in the nest until they are dry and hungry. When the hunger cry becomes insistent the hen and brood are removed to small brood coops having a small wire run. Mother and chicks are confined at first. Then the chicks have range and the hen is confined. Setting a number of hens at the same time, all chicks in the 'battery' are hatched at same time and the chicks are usually allotted about twenty-five to a hen and the remaining hens are set over again.

### Bloody Eggs.

Q. I have sixty hens and all eggs are sold to private trade. I have had a few complaints about bloody eggs; that is, blood all mixed with the white of the egg. It is not caused by broody hens sitting on eggs. Eggs are collected three times a day. They are all locked up and there is no chance of getting eggs from a stolen nest. It is impossible to separate the blood from the white of the egg. There have been six eggs reported this way during the past four weeks. I can't find any reference to this trouble. There is not a crippled or sick hen on the place. I do not think the feeding has anything to do with it. The birds have been laying fine since last November and are still at it.

Seymore, Conn.

T. J. K.

A. Pullets may lay bloody eggs at beginning of lay. Some hens habitually lay a bloody egg now and then. Some hens lay a bloody egg at beginning and end of litter. The only sure remedy is to locate the hen or hens which lay such eggs and dispose of her or of them. Considering the structure and functions of ovaries and oviduct, it is not surprising that bloody eggs are sometimes produced. It is rather remarkable that we do not get more of them than we do.

### House Questions.

Q. (1) I have a house thirty-three feet long, eight and one-half feet wide, six feet high at back and seven feet high in front. Faces just a little south-east. It is covered with rubberoid and all cracks are stripped with poplar three inches wide and one-half inch thick, making it airtight on back and sides. It is an open front down to within fourteen inches of the floor. I have this front covered with one-inch poultry mesh wire and the curtains are made of heavy factory. I keep these curtains up during the day except real cold days and windy days if very cloudy. The house is about fourteen inches off ground and floor is made of two-inch oak, all cracks being lined with strips of iron roofing. I keep about six or seven inches of straw on this floor

for them to hustle in for their scratch grain. I have a row of nests the entire length of building about two feet from floor. The front of nests faces the wall and are about two feet from the wall, making the nests dark. The dropping boards are right on top the nests, making the roots about three feet from the floor. Are they too high?

A. (1) The house is not as deep as we would make it for an open front house, but this is not really an open front house as you have curtains. The nests are not too high.

Q. (2) Have two breeds, viz.: Barred Plymouth Rocks and S. C. R. I. Reds; have a partition about center of house composed of two-inch poultry netting. How many fowls will this open front accommodate? Is it best to have wire or solid partition?

A. (2) Will accommodate about forty fowls. Make the partition part solid and part wire. Have it solid next to roosts.

Q. (3) I have fifty-five eggs in one incubator which will hatch February 10th, and will start another 120-egg machine February 5th. Is this too early to hatch? What kind of incubator is considered the best, the hot water or the hot air system? Is it necessary to supply moisture to the hot water incubators?

A. (3) It is not too early to hatch. Both hot water and hot air incubators or standard makes are good. We have hatched the biggest chicks in hot water machines. Under some conditions all kinds of incubators require supplied moisture.

Q. (4) Is it advisable to set the very first eggs the pullets lay, provided they have been mated?

Stephensport, Ky.

O. W. D.

A. (4) No.

#### Abnormal Egg.

Q. I would like information. I have a pullet that has laid since December. On January 30 I found that she was not feeling all right. She seemed droopy but not sick. The next morning I found her on the nest. She laid an egg with a perfect shell. There was a soft shelled egg inside of this with egg white both inside and outside of it. Inside of this another inner egg skin with egg in it. Has it injured the hen for laying purposes?

A. One abnormal egg does not unfit a fowl for egg production. If you have no further trouble and she continues to appear well and lay normal eggs we should not worry about her. If she does not produce normal eggs would kill her for market. Diseases or abnormal conditions of the egg organs are not often successfully treated and when a fowl begins to habitually lay abnormal eggs it is best to get rid of her while she is still marketable.

#### Remodeling Poultry House.

Q. I have a poultry house eight feet deep by 18 feet long. Could I take out the front of this house and put on a shed in front 10 feet deep and 18 feet long, so as to give an open front house something like the Woods house, 18 x 18 feet? The present house is 6 feet high in front and 4 feet in rear. I want to make a three-pen house.

Worden, Ill.

C. E. N.

A. You can make a good house by remodeling it on that plan, but you will have to raise the roof of the rear section. Would carry the shed roof of the old house up to 8½ feet stud by building

## H. E. BUKER'S PRIZE WINNING BLACK, BUFF & WHITE ORPINGTONS

Grand matings, every pen headed by a prize winner and mated to the best type females that ever grew. All fine in head points and grand in their respective color. Limited number of settings at \$5 per 15 eggs. Two Black Orpington Cockerels winners of first and second and first and third prize at two fine shows. Price reasonable.

## Choice Chicks

Newtown Chicks are blue-blooded aristocrats. They are descendants of a strain of birds that has been line bred for years for exhibition and heavy egg laying.

## NEWTOWN S.C. White Leghorns

are great egg producers. They all have that depth of body which stamps them as heavy layers.

You know that chicks from such birds will become profit-bringers, and you know you're getting the best when you order "Newtown" Chicks.

You know "Newtown" Chicks will reach you safe and sound, because they will be shipped to you in strong, roomy, wooden boxes that ably protect the little ones from rough handling and bad weather.

Let us tell you more about "Newtown" quality. Send postal now for our new and handsomely illustrated poultry catalog Q and mating list.

**Newtown Producing Co., Newtown, Pa.**

on to the front after front of house has been taken off. Then would leave a space for monitor top windows and build on the low front section. In this way you will get a better house.

#### How Many Fowls on This Lot?

Q. My poultry yard contains 160 square feet; roosting coop, 36 square feet; scratching pen, 160 square feet. How many fowls can I accommodate comfortably in such space?

Milwaukee, Wis.

J. S.

A. Twenty, probably. The dimensions as given do not afford much information on which to base an estimate.

#### Fresh Fish for Poultry.

Q. We have a great many worthless fish that go to waste when the fishermen seine, the dogfish and gar are thrown on the banks in large numbers to decay, rot and smell. Can they be utilized for feeding chickens? Can they be preserved like meat scraps? Can the oil be extracted and the residue used for fertilizer?

Havana, Ill.

B. W.

A. The fish can be boiled and fed sparingly to laying hens, not enough to taste the eggs, or they can be fed

freely to growing chicks. Feed only sweet, fresh fish and have it well scalded or boiled. The oil can be extracted by steam cooking and pressure and the remainder used as fertilizer. If fish is perfectly fresh when cooked and oil extracted the cake residue can be ground for poultry feeding. The whole fish, without preparation, can be used for fertilizer if desired. The first settlers in Plymouth County, Massachusetts, found the Indians using fish in the hill when planting corn in the sandy soil, and today waste fish is often ploughed under the soil for fertilizer purposes.

#### Metal Droppings Boards.

Q. Please give your opinion on covering droppings boards with galvanized iron. I am about to build a new poultry house and it occurred to me that a covering of metal would make the droppings boards more sanitary and more easily cleaned.

Oberlin, O.

G. M. S.

A. We prefer to do without droppings boards. We certainly would not want metal ones. Use land plaster, dry loam or other absorbents under the roosts and do without droppings boards. When necessary, clean out the house

and use fresh absorbents under roosts after the cleaning.

#### White Shelled Wyandotte Eggs.

Q. Will pure bred White Wyandottes lay white shelled eggs when they are pullets? Are Wyandottes supposed to lay only brown shelled eggs?

Burkeville, Va.

M. F. R.

A. Some Wyandottes lay tinted eggs that are almost but not quite white. They are classed as a brown egg variety but there is a tendency for eggs to bleach out in color as laying advances. You can build up a brown egg flock by careful selection.

#### Poultry for Mountain Climate.

Q. I am thinking of going into the poultry business and want to know if there is any kind of poultry that will stand the mountain climate of New York state better than others. I want a good breed for eggs. What kind of houses would be best?

E. D.

Ray Brook, Adirondack Mts., N. Y.

A. Wyandottes or Rose Comb R. I. Reds ought to fill the bill all right for what you want. Would use open front houses.

**R. C. Caldwell** Ships Baby Chicks of Quality on short notice. See ad on page 653

**McDANELL'S** Golden and Columbian Wyandottes

# Eggs For Hatching

N. Y., May 7, 1912.

Mr. U. R. Fishel.

Dear Sir: I think that it is up to me to thank you for that setting of eggs that I got from you. My hatch came off last Friday and there was a chick in every egg. I got 13 chicks and the hen killed two of them. I would of had 15 chicks. I am more than pleased with my hatch. I would of been satisfied with 8 chicks. I have got the boys on the run here, some of them paid one dollar for one egg, some of them got one chick, some of them got two and some of them did not get any at all; they got the eggs from some of the best breeders in the country. I won't mention no names where they got them from. I want to thank you again for your honesty and when I buy again I will buy of U. R. Fishel. I beg to remain,

Yours truly,  
Herman L. Griewisch.

Ill., Jan. 18, 1912.

Mr. U. R. Fishel.

Dear Sir: From the setting of eggs I bought from you last spring I raised 8 chickens to maturity, 4 cockerels and 4 pullets. I showed some of these at a couple of local shows and never failed to win the blue. Two of the cockerels scored 94½, one of the pullets scored 95½, and none of them, none of the pullets, went below 94. This shows the good quality that you send out in eggs for hatching.

Now, Mr. Fishel, I would like to have you book me 13 eggs from your very best hens at \$1.00 each. As I would like to raise some next season that will stand competition at such shows as Peoria or Springfield. Because I believe you can deliver the goods. I will not want these eggs until some time in March. I would like to know if I shall send all the money now, or just 50%, and the balance when I want the eggs shipped; either way will suit me.

Your friend,  
Martin E. Johnson.

N. H., Dec. 29, 1912.

Mr. U. R. Fishel.

Dear Sir: What do you ask per setting for your best eggs this year? We had one setting of your eggs last year, hatched eleven chicks, raised nine, six pullets and three cockerels. We exhibited three cockerels at the local show, also four pullets. The birds were judged by I. K. Felch, of Natick, Mass. Cockerels scored 93½, 94½, 95, and pullets 92½, 92½, 94½ and 95½.

We shall want more eggs next March. Yours truly,  
John Currier.

## YARD EGGS.

Ala., March 19, 1912.

U. R. Fishel.

Dear Sir: Please send me your latest catalogue. The eggs you sent me arrived in fine shape, set them a day after under a hen, tested them today and every one is fertile. Thanking you for the attention given my order, beg to remain,

Yours truly,  
J. B. Paterson.

Texas, Oct. 10, 1912.

Mr. U. R. Fishel.

My Dear Sir: I write to tell you what success your chickens or that is chickens hatched from your sale stock eggs are having, or had, at our fair here this fall. They took 3 firsts and 3 seconds and 1 third. One of the early spring hatched cockerels took first over the rooster I bought from you for \$20, and had 5 others who missed beating him only because they were young and did not have the weight, etc., but give promise of being lots better birds. The judge told me I had several \$30 or \$40 birds. I beg to remain,

Very truly yours,  
C. A. DeWare.

## From Our Selected Matings, \$10.00 Per Fifteen From Our Sale Stock, \$10 Per 100; \$6 Per 50

Never were we in better position to give you the best of value in eggs for hatching or baby chicks than we are this season. You can have better success than our last season's customers as our matings are better by far than they were last season.

## U. R. FISHEL'S WHITE PLY. ROCKS "The Best in the World"

Bred in line for over twenty years and winners of the leading prizes at twenty-two largest shows and five international expositions.

Never were we in better position to take care of your order for selected breeders or utility flocks (egg machines) than we are at this time.

Send 25 cents for 64-page catalog, it tells all about our noted White Plymouth Rocks, without a doubt the most beautiful and profitable fowl bred today.

## U. R. FISHEL BOX A, HOPE, INDIANA

### BABY CHICKS

From Yard Eggs . . . \$1.50 each; \$25 per 100  
From Sale Stock Eggs, \$15 per 50; \$8 per 25

Beaver, Pa., Dec. 29, 1912.

Mr. U. R. Fishel.

Dear Sir: Out of the chicks you sent me last May I won first pullet and third cockerel in a class of eight at Beaver Valley Poultry Show.

Yours respt.,  
A. Clyde Wilson,  
Cal., March 31, 1911.

U. R. Fishel.

Dear Sir: I am glad to be able to tell you the White Rock eggs I bought of you tested almost 100% fertile and I had an exceptionally good hatch.

Mrs. E. E. Young.

Mich., May 22, 1911.

Dear Sir: I received the fifty eggs you sent me. They hatched the 20th, hatched 41 chickens. I consider that a good hatch.

Yours,  
James M. Morrison.

## SALE STOCK EGGS.

Ga., Jan. 28, 1913.

Mr. U. R. Fishel.

Dear Sir: I thought perhaps you would like to know how well I am pleased with my White Rocks. Out of the 50 eggs sent me I hatched 23, lost 3 first week, balance grew finely, culled to 13—4 cockerels, 9 pullets. Sold 2 cockerels at \$5, am using 2. Took first pen prize at the trio country fair held here Nov. 24, Loring Brown, judge. They were 7 months old Nov. 24. They commenced to lay Dec. 6, laid 64 eggs in Dec. Have one pullet that laid 20 eggs before she was 8 months old; pretty good, is it not? So you see I cannot help being well pleased, as utility stock is what I want.

Oh, yes, I did not try to fit the pen to show, just took them as they were running in yard, while the other White Rocks were washed and groomed. Yours for the "Best in the World."

G. E. Whitman,  
315 E. Magnolia Ave.

Cal., May 25, 1912.

U. R. Fishel.

Dear Sir: I thought I'd drop you a line to let you know how my hatch came off. From 127 fertile eggs I got 94 strong, lively chicks. I am more than pleased with the results. Thanking you again for your liberality, I am,

Yours very truly,  
Albert W. Gay.

O., Jan. 13, 1913.

Mr. U. R. Fishel.

Dear Sir: To begin with, must tell you of the excellent results of the 100 utility eggs secured from your place in April. Raised thirty-six chicks. Cockerels won 1st, 2nd at our home poultry show and the pullets are superior to anything shown here.

I am very respectfully,  
Mrs. A. I. Davey.

Beaver, Pa.

San Diego, Cal., July 29, 1912.

Mr. U. R. Fishel.

Dear Sir: I received the shipment of chicks from you today; eleven were in fine condition and one was dead. Considering the distance they traveled (7 days) I think the shipment was a great success. Thanking you,

I am yours truly,  
John Q. Symons,  
656 Main St.

Gregory, Mich., June 12, 1912.

U. R. Fishel.

Dear Sir: The chicks arrived last night all O. K., not a dead one in the bunch of 110. Very much pleased with them. Hope we may do some business another season. Many thanks.

Yours very truly,  
C. N. Bullis,

Thomasville, N. C., Sept. 2, 1912.

U. R. Fishel.

Dear Sir: From the hundred chicks we purchased from you Mar. 1st we have 3 cockerels for breeders, 30 capons and 45 pullets. The latter are laying now. Our capons, which underwent the operation six weeks ago, weigh 6, 6½, 6¾ lbs. to date and growing fine.

Very truly yours,  
H. W. Frichtel.

## BABY CHICKS.

Texarkana, Texas.

February 24th, 1913.

Mr. U. R. Fishel.

Dear Sir: I still have (fifteen) 15 of my (seventeen) 17 little chicks that you sent me. They are growing like weeds; they will be three weeks Friday, and they look like they might be five weeks old.

Yours respectfully,  
Mrs. Ira Johnston.

# Poultryman's Calendar

Conducted by  
Prince J. Woods, M. D.

## April to Mid-May.

Chicken time! Eggs should hatch well this spring. Try old-fashioned hen hatching, setting the broodies in lots of four, six or ten at one time. Set them in outdoor nests, having wire netting bottoms, so that the nesting material is practically on the ground. We believe you will be pleased with results.

Eggs are low in price, but fortunately grain sells at more reasonable prices than it has for several seasons. Good old fowls are rather scarce and the price is good, not as good as it ought to be, but better than it has been. Soon there will be abundant and cheaply produced greens to help cut down the cost of poultry living. Make all the money you can out of things as they are NOW. Time enough to worry about the future when you get to it.

This ought to be a good chick-growing season, and the cost of production should

not be as heavy as it has been the past two seasons. Selling prices for chickens ought to be as good or better than average seasons. The egg market is likely to remain uncertain for some time, and the price of eggs lower than normal. This condition may possibly be due in part to increased production, but it seems more probable that speculation and cheap newspaper notoriety are largely responsible. Recent sensational yarns about the "rotten egg business" haven't helped the consumption of eggs any.

While eggs are low in price, turn the eggs into chicks and then turn the chicks into money. Under good management this will give better returns. Hatch all the chicks you can rear comfortably and take the best of care of. Don't attempt to grow more than you can grow well.

Be careful in feeding corn products to small chicks. Sound corn is one of the best foods. Spoiled corn is one of the most dangerous foods. Don't feed stale

chick food. Don't feed chick food that is musty or that contains cracked grains that appear blueish or greenish in color. Such food is poison to chicks. Chick food should be fresh and it should be made of only sound sweet grains.

If you have difficulty in buying good chick food that you KNOW is all right, better get a small grinding mill and make your own chick food at home. You can make a good chick food by grinding together the following mixture:

Parts.

Sound, hard, old yellow corn.....	4
Sound, hard, whole wheat.....	3
Heavy, clipped, white oats.....	2
Sound, heavy barley.....	1
Mix by measure and grind to coarse chick food size. There will be a good many hulls and quite a little meal in the mixture. Feed it all in a food box or hopper or pan. Chicks will eat it greedily and it is all good for them.	

If in doubt about the corn and not sure

## Aldrich White Orpingtons The Strain of Quality

Do You Have In Your Yards The ALDRICH STRAIN OF QUALITY?

To prove to you the superior quality and the excellent blood lines of our strain, we call your attention to our winnings this season at Allentown, Atlanta, Baltimore, Augusta, Chicago and MADISON SQUARE GARDEN, winning 59 out of the 150 prizes offered in competition with 983 of the best birds shown by 153 exhibitors from 30 states, as well as the cream from Canada and England.

At the Great Allentown Show we won GRAND CHAMPION FUTURITY COCKEREL AND PULLET, proving that our matings of last year were correct and they are even better this year.

Our customers have won with birds raised from our eggs and from stock purchased from us, from the LAKES to the GULF, and from OCEAN to OCEAN. Our beautiful 64-page illustrated CATALOGUE gives you a complete list of our remarkable winnings of this year and last. It also describes in a vivid and accurate manner the stock we have for sale, as well as describing our 30 MATED PENS which we say, without fear of contradiction, are, taken as a whole, THE GREATEST LOT OF EXHIBITION AND BREED-

ING BIRDS on any one farm in the world today.

Eggs from these GREAT PENS are sold at \$5.00, \$10.00 and \$15.00 per setting of 15. A limited number of incubator eggs from our high grade SALE STOCK at \$15.00 and \$25.00 per hundred.

A limited number of HIGH GRADE PENS of EXHIBITION BREEDING BIRDS at \$50.00 and \$100.00 per pen. A number of HIGH GRADE UTILITY PENS at the unusually low price of \$20.00, and to every customer purchasing a pen of this quality we will send free a setting of our \$5.00 eggs.

Do not fail to send for our beautiful CATALOGUE with COLOR PLATES; it's FREE. We guarantee satisfaction in all cases, either in STOCK OR EGGS. MUCH MORE, RATHER THAN A LITTLE LESS, OUR MOTTO.

ALDRICH POULTRY FARM, R. F. D. 7, COLUMBUS, OHIO

that it is sound it can be left out of the food. Don't feed corn that has been heated, or that is acid and spoiled, or that is musty, mouldy or affected with green heart. You can't afford to take chances of killing chicks with spoiled corn, and this is the season of the year when there is a lot of spoiled corn on the market, corn that has not been properly cribbed and cured. Remember that there is nothing better than good corn and there is nothing worse than spoiled corn.

\* \* \*

Freshly cracked, hard, sound wheat is an excellent food for starting chicks. Good rolled oats go well with it. Cut clover makes fine brooder litter, and the chicks will eat a lot of it. Well-boiled rice is an excellent addition to the chick food ration. Sprouted oats, if not allowed to get musty or mouldy, are fine food for small chicks.

\* \* \*

Keep brooder chicks comfortable. Run the brooder by the chicks rather than by the thermometer. The thermometer won't indicate comfort, the actions of the chicks will prove the best guide. Better have too much heat under the hover than not enough. In any well constructed brooder the chicks can get away from the heat if there is more than they need, but you can't keep them comfortably warm when there is not heat enough.

\* \* \*

If you are rearing with hens you have less to worry about. A good mother hen will attend to the brooding if given a chance. All she needs is a comfortable coop, sufficient food and water for herself and brood, reasonable cleanliness, and a chance to do her work as nature intended she should.

\* \* \*

If you haven't read the book, "How to Raise Chicks," better get a copy and read it now. You need it if you want to get best results during this chick growing season. The price is only 75 cents, and it should save you as many dollars. Address Book Department, American Poultry Journal, 542 So. Dearborn street, Chicago, Ill.

\* \* \*

Start a garden for the home table and for the poultry. Now is the time and you will find it well worth while.

\* \* \*

At first it is a good plan to keep the mother hen confined and to let the chicks run. After they get big and strong enough to stand following mother's footsteps on long cross country junkets it is well enough to let mother and brood range at will, provided conditions permit it and the neighbors don't object. As a rule rather close confinement for the brood hen and quite liberal enclosed range for the brood of chicks is best.

\* \* \*

Don't keep brooder chicks confined IN the brooder too long. Much depends on the season and on the weather. In mild warm weather they can be taught to use an outdoor run of small size by the second day in the brooder. In cold or stormy weather they may have to be confined to the brooder for the first week. But be sure to get them OUT ON THE GROUND soon and teach them as early as possible to go in and out of the brooder as sensible chicks should.

\* \* \*

While chicks can generally get out on the bare ground several days earlier in mild weather than in cold weather, they learn more quickly to use the brooder as a warming up place when the weather is

cold. Start them with small runs at first and gradually increase the size of the runs as needed. Teach them to go into the brooder to get warm. Drive them in and tuck them under the hover when necessary. Don't let them huddle or crowd in sunny spots outside of hover.

\* \* \*

It is a good plan for you to remember, at this time, that old Dame Nature knows her business. She has been raising chicks for several thousand years. She has had no particularly dangerous competitor all through the ages and she is still right on the job and delivering the goods. When you want to learn the "know how" study Nature. Follow her teachings for

best results and try to use your common sense to make up for any handicap in conditions and environment you may find in your own particular case. Common sense and the power to observe, and know what you see and hear, are mighty necessary qualities in the "chicken business."

\* \* \*

CHICK COMFORT is the only secret of success in chick rearing. If they have an abundance and variety of wholesome food and are cared for in a common sense manner they will be comfortable. Any time they are not comfortable they will let you know it, provided you are at all observing. Study your chicks and let the chicks be your guide.

## "O.K." Poultry Litter

TRADE MARK

Is the most wonderful litter for LAYING HENS, BABY CHICKS and POULTRY of all kinds. It's cheaper to use and ever so much better than Straw, Clover, Alfalfa, Sawdust, Shavings or anything else ever thought of for litter. Everyone who tries it uses nothing else.

'O. K.'  
KEEPS  
THE

# BROODER

CLEAN  
DRY  
SWEET

### WITHOUT ONCE CLEANING OUT

Can you imagine the comfort, convenience and time saved running your brooders like this? Remember, one lot of "O. K." Litter lasts until the chicks have outgrown the brooder, without one cleaning out. IN COOPS, LAYING HOUSES, COLONY HOUSES and SCRATCHING PENS "O. K." Litter dries up the droppings so that the house is always dry, clean, sweet-smelling and sanitary, and needs cleaning out only once in 3 or 4 months. "O. K." Litter is a tremendous saver of time and money.

### WRITE TO-DAY FOR FREE SAMPLE.

"O. K." Litter will not burn. Lice will not come where it is used. TELL US HOW MANY HENS AND CHICKS YOU KEEP—WE WILL TELL YOU HOW MUCH "O. K." LITTER YOU NEED.

Write to-day for the free sample and printed matter. You need them.

## Good Things for Everybody

Helen F. Woods  
Editor

There are hermit souls that live withdrawn  
In the peace of their self content;  
There are souls like stars that dwell apart,  
In a fellowless firmament;  
There are pioneer souls that blaze their paths  
Where highways never ran;  
But let me live by the side of the road  
And be a friend of man.

I see from my house by the side of the road,  
By the side of the highway of life,  
The men who press with the ardor of hope,  
The men who are faint with the strife.  
But I turn not away from their smiles nor their tears—  
Both parts of an infinite plan;  
Let me live in my house by the side of the road  
And be a friend to man.

I know there are brook-gladdened meadows ahead  
And mountains of wearisome height;  
That the road passes on through the long afternoon  
And stretches away to the night.  
But still I rejoice when the travelers rejoice,  
And weep with the strangers that moan,  
Nor live in my house by the side of the road  
Like a man that lives alone.

Let me live in my house by the side of the road  
Where the race of men go by—  
They are good, they are bad, they are weak, they are strong.  
Wise, foolish—and so am I.  
Then why should I sit in the scorner's seat  
Or hurl the cynic's ban?  
Let me live in my house by the side of the road  
And be a friend to man.

—Sam Walter Foss.

**E**VERY MAN IS more or less dependent upon his friends. While he may be shut off from their society there is yet an interchange of thought and appreciation which great distances or long absence may not affect. Castaways on desert islands through long months of loneliness have exerted the influence of friendship to brighten their loneliness, even though all communication with mankind was cut off. The dependency of one human being upon the friendship of another is well in the saying "That no man is hopeless while he has a friend."

It is inevitable that in the great majority of cases we expect too much of our friends, demanding more of them than we are willing to give in

exchange. We demand loyalty in the face of unjust criticisms. We accept kindnesses in word and deed from our friends in our hour of trouble and disappointment, and forget them in our time of rejoicing. With such an attitude the wonder is that we possess any friends since the foundation of friendship is in being friendly. Mutual confidence, and mutual regard for the rights, each of the other are as necessary in making friends as are sun and water to the plant. Since friendship is ever a two sided affair, it cannot long exist without mutual qualities for friendliness.

The value of true friendship is underestimated by the great majority of people. They do not enter into it suf-

ficiently to understand its worth. They inspire little or no confidence by their acts of insincerity and go through life neither giving nor receiving the priceless gift of true friendship.

We are all so dependent one upon another, not only in seasons of sorrow and trouble but even when the heart is most glad, that it would seem essential to happiness that we cultivate the regard and confidence of our fellow men. In this, as in all good things, the beginning of a friendship need be but a very small and unnoticeable act by he who preforms it. The receiver, if he possesses the qualities of true friendliness will from this small beginning cultivate a certain agreeableness and confidence in one whose friendship has been thus proffered.

There are those in every community who attract the regard and friendship of those about them and this without any apparent effort on their part. A mere attractiveness of person or manner cannot however do more than win friends for us. There must exist a certain strength of character and nobility of purpose back of any outward charm to hold through sunshine and storm the confidence of one's friends.

The art of fitting ourselves to the surroundings wherein we are placed, of making friends among those with whom our lot has been cast, is often times worth cultivating. We need not necessarily foster close relations with those who offend our sensibilities or those who, by their disregard of the rights of others, make life miserable for those about them. There are, however, people in every community, though they may not be what is commonly called cultured, yet they are possessed of those qualities of confidence and kindness which are so essential to true friendship.

# FOXHURST

## Champion Black Orpingtons

Win Five Firsts at Madison Square Garden, N. Y., World's Greatest Show

A CLEAN SWEEP—Thirty birds entered and twenty-two wore ribbons. This is the first time in the history of Black Orpington classes at the New York show that all the firsts have been won by one breeder. Our complete winnings are:

First and third cocks; first and fifth hens; first, third, fourth and fifth cockerels; first second, third and fifth pullets; first and fourth pens. \$25.00 for best display.

Every Champion bird in our exhibit was bred and raised on our farm, to which fact we will make affidavit. The competition was the keenest ever seen in the Garden. The Crystal Palace (London, England) winners were in competition, as well as America's and Canada's best. Birds that were personally selected in England and Canada to win this show were defeated by our American bred, Foxhurst Champion Strain Orpingtons who, in addition to our 1913 record win, have been the largest winners at New York for the past five years. This unprecedented win indelibly stamps our birds as the undisputed Champions of the World. For eggs from our Champions write to headquarters for 1913 mating list; eggs, remember, from the same matings that we use ourselves. Exhibition stock at reasonable prices on hand at all times. Breeders with same blood as our Champions at from \$5.00 to \$10.00. Satisfaction and safe delivery guaranteed. Write, mentioning American Poultry Journal.

**FOXHURST FARM Lime Rock, Conn.**

Human beings are strangely one like the other. Not one among us can be always right or always wrong, yet we constantly sit in judgment on the faults and frailties of our friends with as little feeling as if we were ourselves without fault. We cherish the unkind thought, we look for the evil rather than the good, and frequently mete out from our own hands the punishment. Have we done no wrong that we should stand unforgiving and determined as the accuser? It is so easy to blame another for a misdeed. It is so easy to believe that under similar circumstances we could not have made the mistakes that others are constantly making, but "alas for the rarity of christian charity," it is not broad enough or great enough to reach the misdeeds of others. It can only cover our own. Too many of us are competing against ourselves in an effort to belittle the work of others. No man or woman on the right road to success has time or energy to waste on the work of belittling their fellowmen. Human efficiency is not so plentiful that we can afford to so belittle ourselves. There are men and women everywhere that are almost down and out because of the work we are doing to put them there. They stand in great need of a little appreciation of their true worth. What right have we to "hurl the cynic's ban"? By what right do we "sit in the scorner's seat"? Alas too few of us have sufficient kindness of heart or charity to lend a helping hand where it is most needed.

#### CORN POPOVERS.

By A. S.

Scald one pint of milk, add an even tablespoonful of butter, sift in one heaping cup of corn meal, a quarter cup of white flour. Allow to cool and add three well beaten eggs. Bake in iron gem pans in a quick oven.

#### GRAHAM ROLLS.

By A. S.

Moisten one pint of graham flour, one teaspoon salt and a tablespoon of sugar with two thirds of a cup of ice water and beat hard until a stiff dough is formed. Then knead constantly for twenty minutes until the dough is fine grained and elastic to the touch. Roll out and form into finger shaped rolls, kneading each one, and place in a pan each a little apart from the other. Prick each roll with a fork and allow to bake in a hot oven.

#### SOUR CREAM PIE.

By A. S.

- 1 cup sour cream.
- $\frac{1}{2}$  cup seeded raisins.
- $\frac{1}{2}$  teaspoon cinnamon.
- 1 cup sugar.
- $\frac{1}{4}$  teaspoon cloves.
- 3 yolks eggs.
- 1 white egg.

Bake with one crust, using the whites of two eggs with two tablespoonfuls of sugar for the frosting, baking the pie first, and frosting after, replacing in the oven until the frosting is a nice brown.

#### CURRIED EGGS.

By H. A. L.

Three hard boiled eggs, two tablespoons butter, two tablespoons flour, one-fourth teaspoon salt, one-half teaspoon curry powder, little pepper, one cup hot milk. Melt the butter, add the flour and seasoning and gradually the hot milk. Cut the eggs lengthwise and re-heat in the sauce.

#### EGG OMELETTE.

By H. A. L.

Use five eggs, separating the whites from the yolks. Beat the whites to a stiff froth, adding a pinch of salt. To the yolks add three level teaspoons of finely rolled cracker crumbs, one third cup of milk, a little pepper and salt to season and mix thoroughly. Turn the yolk mixture into a hot buttered frying pan and spread the beaten whites lightly over the top. Cook until the under side is browned, roll, and serve immediately.

#### STEAMED EGGS.

By H. A. L.

Break half a dozen eggs into separate cups, having ready a well buttered

dish into which each egg should be placed carefully. Cover the dish to prevent heat from escaping and place over a pan of boiling water, first putting small bits of butter lightly over the top of the eggs. When sufficiently steamed, sprinkle lightly with salt and serve with hot buttered toast.

#### STUFFED EGGS.

By H. A. L.

Cut four large, hard-boiled eggs in half and take out the yolks and mix them with one-half cup of minced ham, a little pepper, salt and butter. Fill the whites with this mixture and press together. Place each egg on a square of toast and pour over them two cups of hot cream sauce.

## S. C. WHITE ORPINGTONS

Canada's Best. Second to none in the World. Winners at the leading Canadian shows, also Madison Square, N. Y., 1913. Matings the best I ever yarded. Stock for sale. Prices reasonable. Send for illustrated catalogue. Wm. Moore, Munroe St., Hamilton, Ont., Can.

## VASS ORPINGTONS AND SILVER CAMPINES

I can give you bargains in Buff, Black and White Orpingtons in single, pairs and pens. I have the best this season I ever owned and will assure you better value than ever before, and fair treatment in all cases. They have show records; Silver Campines, best English and American bred. We have birds in your yards from Capt. Max Debathe of England; also Kennedy and other leading strains. Birds are large, well marked and great laying strain of large, white eggs. You can not make any mistake in taking up this beautiful fowl. They are the rich man's hobby and poor man's friend. Am booking egg orders now. Write for prices; booklet free.

WASHINGTON, N. J.

# Kill the ROUP Germ

Stamp out this disease in your poultry yard. Roup germs lurk in the drinking water, nests, coops, everywhere they can find a breeding place. Stamp them out—use B-K. Just put a few drops of B-K, the powerful, non-poisonous, colorless germ destroyer in their drinking water. Sprinkle the nests, floors, roosts, coops with a dilution of this wonderful germicide and you will knock the Roup Quick. Try it at our expense.

**Sample Free** B-K is not only the best germicide but the cheapest to buy—the easiest to use. It is ten times as effective as clear carbolic acid, yet it is perfectly safe to handle and keep about the house. For Cholera, Gapes, White Diarrhoea, etc., it has no equal. B-K does not cause your hens to drink less or slack up laying. Send for FREE SAMPLE BOTTLE—try it without cost. The result will please you. Don't wait—send NOW while you can get B-K to try FREE.

**GENERAL PURIFICATION Co., 625 Pioneer Bldg., Madison, Wis.**

## Don't Feed Your Fowl Green Food

Succulenta Tablets dissolved in the bird's drinking water, are just as good, less expensive and much easier to handle. These tablets have been thoroughly tested by well-known poultry men in different sections before being placed on the market. Thousands are now using them with excellent results. We can furnish hundreds of testimonials.

A chemical analysis of green sprouted oats, heretofore considered the best source of green food for fowl, shows that it contains 90% water, and 10% dry substance or solids. You can get the water better and cheaper, and with less labor, from your

well or spigot. The only value of green sprouted oats, therefore, must rest in the 10% of dry substance.

An analysis of this, shows that it contains principally carbo-hydrates, fibre, and very little ash. Fibre you don't want. Our regular poultry rations already contain a large quantity of carbo-hydrates, from a cheaper and better source.

It is therefore, foolish, to grow green sprouted oats for water, fibre, and carbo-hydrates. Their value to your birds must be in the ash, or salts. Succulenta Tablets supply these salts in a cheaper and better form.

# Succulenta Tablets

Save Half the Cost

of feeding green foods. They are cheaper than cabbage at 2c a head, and green sprouted oats are far more expensive than cabbage. So, why bother with green foods at all when Succulenta Tablets are so handy, so cheap, and so much relished by all fowl in their drinking water. We have proved this to be true over and over again. Therefore Succulenta Tablets are sold on a money-back guarantee of satisfaction, which reads as follows:

"We positively guarantee Succulenta Tablets, when dissolved in drinking water of fowls, at the rate of one tablet in one quart of drinking water, to enable you to do away with

all green foods; and we hereby agree to cheerfully refund your money for any Succulenta Tablets you may buy, if the results are not entirely satisfactory."

100 mature fowl will drink from 12 to 14 quarts of water a day and will therefore consume from 12 to 14 Succulenta Tablets.

Succulenta Tablets are put up only in packages of the following sizes:

One can, 100 large tablets, \$0.50. One can, 250 large tablets, \$1.00. One can, 500 large tablets, \$1.75. Two cans, 1,000 large tablets, \$3.00. Ten cans, 5,000 large tablets, \$12.50.

Send for trial package today.

Remittances must accompany all orders, and can be made in cash, money order, or check. Postage stamps not accepted.

We prepay charges anywhere within the parcel post zones of the U. S. Order now.

WATCH YOUR LITTLE CHICKS GROW ON SUCCULENTA WATER

# Pittsburg Fanciers' Club Show

Fifteenth Annual Exhibit Held February 17 to 23,  
1913—The Season's Closing Show. *H. P. Schwab*

**T**RAVEL this country over and you will fail to find another lot of fanciers like the Pittsburgh Fanciers' Club. For fifteen years they have been holding their exhibits at the old City Hall, and during these years they have held shows and made a reputation that will live forever to their credit.

President G. Wash Moore, an old-time Game breeder, and Vice-President E. H. Seldon are among the oldest breeders and exhibitors still in active breeding life. They are of the younger set who many years ago made history at the great shows, and with the late John L. Cost made things hum. Everybody knows Joseph P. Hildorfer, of Minorca fame; F. L. Ober, the "Original" Red man, C. F. Porteous, J. M. Skiles, L. E. Vierheller and others of their stamp, who are sound and reliable men and breeders who have stood fast for all these years like one and have made possible this great show with its honorable record covering fifteen years of valuable service to the poultry industry in this country.

Mr. George C. Sutch, the secretary, while a very interested breeder, is best and favorably known for his labors in this association. He is a man of sterling worth, whose manner and care for every exhibitor's interests have endeared him to all. He has the unlimited confidence of all.

This season Pittsburgh has had three shows, but this or no condition can in any way interfere with the Fanciers' Club show, for this year their exhibit was larger and better than ever, and about a thousand entries had to be refused, as they have to limit them. Quality is the keynote of this show, as a reference to the exhibitors will show; there will be found the names of many breeders that assure quality to every class.

The judges this year were J. C. Punderford, F. G. Bean, John W. Poley and H. P. Schwab, with Mrs. James Wood and little George Ewald for pigeons. The classes were uniformly large and strong, with upwards of 2,500 birds shown. In Rocks, Wyandottes, Orpingtons, Leghorns, Minorcas, Campines, Anconas, Single and Rose Comb Reds, Houdans, etc., the competition was very strong and honors won carried the stamp of quality withal.

The attendance is a feature here, breeders coming from many states to see this show and to buy. Sales were reported from all classes, Mr. Robert J. Walden refusing to sell his first Barred Rock hen for a price almost the equal of any we have ever heard of, and Mr. J. S. Brady refusing an offer of \$300 for his winning White Orpington cockerel.

There were several little dinners by the breeders to a few friends, one by

Mr. Hildorfer, with Mr. Ewald as toastmaster by general request. Well, there are two positions that George can play with success; they are noodle soup and acting toastmaster. Mr. Suleto entertained the officers and judges; in fact, it was one round of good times and good things to eat, enjoyed by all.

## The Exhibitors and Winners.

Barred Rocks were a beauty class in size and quality—by far the best we have ever seen here, and with birds in wonderful condition. Mr. R. J. Walden, Middleburg, Md., made a phenomenal record, showing a class of birds that were a revelation to all. His winnings were: Cock, first; hens, first and third; cockerel, fourth; pullets, first and fifth; pullet bred cockerels, first, third and fourth; and several specials, including Sweepstake Special for best pullet in the show.

Mr. H. L. Fike, Meyersdale, Pa., won first pen; first pullet mating pen; cock, third; cockerel, second and fifth, and pullet, second. First exhibition pen a beauty.

Mr. C. F. Porteous, Wilkinsburg, Pa., won second and third pullet mating pen; hen, fourth, and pullet bred cockerel, second. This line is coming fast and we were glad to note their quality in sharp and straight barring. We hope to see more of them.

Miss Marie Hildorfer, 86 Chester avenue, N. S., Pittsburgh, won hen second and cockerel third. The hen was a bright beauty, evenly barred and of extra-fine size and form; third cockerel was one of the very best in form, and grandly barred, nice head, etc.—a valu-

# BRADY'S WHITE ORPINGTONS

At Pittsburgh, February 17th to 22nd, 1913, Win

First cockerel at the Pittsburgh show, 1912,  
and first cock at Pittsburgh, 1913.

1st cock; 1st, 4th, 5th hen; 1st, 2nd cockerel; 2nd, 3rd, 4th pullet and 1st pen. This is the **wind-up show of the year**, and the White Orpington class was **strong**, and I won a place on **every bird entered**, including **4 firsts**.

**FAR** Above the Average in Quality **FAR** Below the Average in Price

Kokomo, Ind., Feb. 10, 1913.

J. S. Brady: To make a long story short, there was no local show held here this winter, but I knew I had some good White Orpingtons from Brady's stock, so I had the nerve to enter them at the great INDIANA FANCIERS' SHOW held February 3d to 7th in INDIANAPOLIS. I WON FIRST PULLET and SECOND COCKEREL. Inasmuch as there were a large number shown in both cockerels and pullets, I think my success was really remarkable. NOW WHEN YOU CONSIDER THAT THIS WINNING WAS FROM ONE SETTING OF EGGS, AND SHOWN BY A MAN WHO WAS AS GREEN AT THE SHOW BUSINESS AS THE SHAM-ROCK OF IRELAND, I THINK IT ALMOST PHENOMENAL. I want to thank you for such good treatment and remain

Yours truly, W. W. COLES.

The above eggs were from my yard No. 1, and yards No. 1 and 2 for 1913 are headed by the same males as last year. Catalogue describing the matings sent free.

Eggs \$5, \$10 and \$15 for 15. Sent by Parcel Post prepaid

J. S. BRADY

::

::

PARKERS LANDING, PENN.

able bird and only a mite passed his best.

First cockerel was won by Herman Schockey, Sand Patch, Pa., with a bird of even and beautiful surface color and extra under; he is a beauty in every section, stands well, and of excellent form. It was his general even quality that won for him.

In White Rocks and in a very large and strong class the honors were about even among several exhibitors. First pen, one of rare quality and well mated with a great cockerel was won by G. B. Hatton; second, a very close one, by W. T. Auerswald; first cock, a bird of great form and condition, to M. A. Milliron; first cockerel to Woodlawn Poultry Yards, while Mr. W. H. Knoch won first hen and pullet.

Buff Rocks were a beauty class well shown. First cock, an exceptionally fine bird in sound, even color and ideal form. One of the best seen this year. All awards went to Vierheller Bros., Pittsburgh.

A very nice class of Partridge Rocks completed this variety, with most of

the honors going to S. J. Childs, McKeesport, Pa.

In S. C. Reds a sensational class was seen, with the Schenley Heights Poultry Yards winning pen first, cock first, hen first, cockerel first, pullet first and second. The first cockerel also won the Sweepstake Special for best cockerel in the show. This line has made a great record this season, their charming quality placing them first at Philadelphia, Cleveland and Pittsburgh, winning at these three shows thirteen firsts of a possible fifteen, and at each of these three shows they won the special for best cockerel in the show—a win with greatest credit. Mr. Rankin, also at Pittsburgh, was awarded by the exhibitors present the special "Tomasso Canna" cup as a token of the special esteem in which he is held. Prof. F. L. Ober made the presentation.

Another excellent exhibitor in this class was Mr. E. S. Shelly, Williamsburg, Pa. He won hens second and fifth and pullets fourth and fifth. Mr. Shelly has been winning for years, here and elsewhere, and has the quality, we

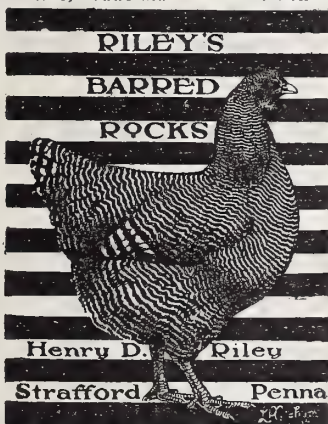

can comment. For evenness of quality, sound color and breeding value, his line is favorably known. Last year we visited his home and told our readers of his birds in a writeup. We were pleased to meet him here.

In R. C. Reds it was a close contest for honors between several breeders, and in several classes but a fraction of a point divided the winners. The F. L. Poultry Yards, Verona, Pa., owner by Herr Ober, won cock second, hens first and fifth, cockerels third and fifth, and pullet second. This line has won at the Palace, New York, and other shows this year and is one bred for years by a man who is a most interesting fancier. This F. L. line has this year been exhibited at New York, Cincinnati and McKeesport, where they have won nine firsts, six seconds, seven thirds, four fourths, two fifths, three silver cups for best displays, Gold Special for champion female at Cincinnati, and three shape specials.

The Ontario View Poultry Yards, Oneida, N. Y., won several pieces of silver and cock first and third, hens

# Riley's Barred Ply. Rocks

Riley Trade Mark of Perfection

Whenever you see the "Bars" think of Riley's Rocks—Barred of course

Lynchburg, Va., January 18, 1913.

Dear Sir:—

You remember that I wrote you some time ago, telling you about my win with one of your cockerels at Lynchburg, Va. This was a great win, as the class there was red hot, but since that time this cockerel has won a victory that places him among the few great cockerels of the season. I entered him at Charlotte, N. C. Show, January 10-14, where the National Meeting of the American Barred Plymouth Rock Club was held. This bird was not only an easy winner in the best class of Barred Rock cockerels ever seen in the South, but was champion male, and also won the Grand Championship Silver Cup, value \$100.00, for the best male in the show. I feel proud to own such a cockerel, but you should feel prouder of having bred such a bird.

Yours truly,  
(Signed) M. B. Hickson.

Lebanon, Kansas, January 27, 1913.

Dear Sir:—

You may be interested to hear further about the birds that I wrote you of last fall. I have an undefeated cockerel from your Yard No. 5. In the three shows in which I have shown him he has been an easy winner, and if his sire had much the best of him he certainly deserved all that he got. I have three other cockerels from Yards 5 and 6, and they are all fine birds. The breeder that breeds and puts out better quality than you do at present will demand a great business with the many breeders of our favorite breed. The cockerel I am heading my first pen with has that clean-cut blue bar and the shape that wins in the best of company. Wishing you the future success that you so richly deserve, I am,

Yours very truly,  
(Signed) W. H. WRIGHT.

No greater victory could have come to me than have been the victories of my customers throughout the country. It is the convincing proof that my eggs hatch winners, not alone for the smaller shows, but for such shows as Madison Square Garden, Boston, Chicago, Philadelphia, Guelph, Canada, Cleveland, etc. At every one of these shows, a bird hatched from my eggs was in the winning three. It is proof that I sell you my best and "Riley's Best" means the best that money can buy.

## If You Want to Breed a Winning Strain

There is no other line that will produce such results for you as the Riley Strain. My birds have carried off the leading prizes for me at every show where I have exhibited for the past ten years, and every mating that I have is rich in the blood of my Madison Square Garden winners. Every breeder who is anxious to carry off the highest honors at his next show should not fail to send for my illustrated mating list. I feel safe in saying that I can surely produce a winner for you. It is up to you.

**Henry D. Riley, Box B, Strafford, Chester Co., Penna.**

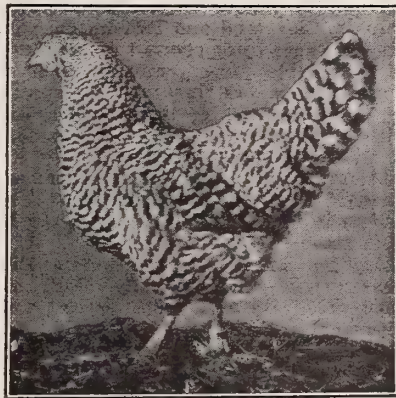

second and third, cockerel first and fourth, pullets first and fourth, and pens second and fifth. The winning cockerel was a bird of wonderful form and style, with a beauty head and sound color, extra wing; first cock, a corking good one, grand surface and under; first pullet, a hummer, well shown—a beauty display and a win of exceptional credit to any line.

In White Orpingtons special interest was had, for in every class birds of record and in wonderful condition were seen. In this great class, teeming with quality, Mr. J. S. Brady, Parkers Landing, Pa., made a record of surpassing value and a credit to his line. We were glad to see those birds here, and we are itching to visit his plant again and see his whole line, for the marks of progress are most evident in those shown and with which he won cock first, hens first, four and fifth, cockerels first and second, pullets second, third and fourth, and pen first. Every one of these deserves mention. The cock was a noble bird, well carried, with extra front and back, fine comb and eyes, and the best of color; first, a most attractive bird, well balanced and of splendid form and sound color—one of the very best seen out this year. First hen was a gem, with style and every quality. Mr. Brady's first pen was the climax of finished and superior mating and quality. The male was a rare bird and the females moulded in the one form of typical excellence. Such stock has the marks of triumph indelibly stamped, with which Mr. Brady has proven his worth as a breeder and the value of his line. This

pen was awarded the Sweepstake Special for best pen in the show.

Mr. L. O. Kettering, Pittsburgh, specialist of Black Orpingtons, was another to make a win of special worth, as follows: Cock, first; hen, first and second; cockerel, first; pullets, first; and pen first, with a classy lot. His winning cock also won the show Sweepstake

DOMINIQUE HEN.

Bred. owned and exhibited by A. Q. Carter, Freeport, Me. Winner of blue ribbons, Boston, 1909, 1910, 1911, 1912. Winner of blue ribbons, Mad. Sq., N. Y., 1911.

Special for best cock in the show—a bird of size, well carried, and with the best of form and sound color. First cockerel, a bird of best quality and great promise. His winning females

in both hens and pullets have class and won in beautiful condition:

White Wyandottes, a large class and of large merit. The winners, a rare lot and well shown; the winners in cocks and cockerels, very nice. Buffs also a beauty class, with sound color, fine heads, and extra good form. Columbians were out in full force, with many choice birds in line. Good surface and nice markings seen to advantage. Golden, Silver and Silver Penciled completed the class.

S. C. White Leghorns were one of the three largest classes in the show—a compliment to Judge Punderford, who made his first appearance here and worked as successfully as usual. Here and in every class were seen birds of the best in type and condition. Mr. W. J. Gowern, Jr., Canonsburg, Pa., showing but two hens in order not to conflict with some birds sold, won both first and second. He has won here for some years and has also supplied winners for others. At Canonsburg he won first pen for five years in succession, and this year at the Exposition Show won first pen in a class of twenty-five pens competing.

S. C. Buff Leghorns, a quality class with an extra large entry, all winners and very neat and sound. First cockerel was a wonder in color and condition, with extra fine head.

S. C. Brown Leghorns formed a large class well shown. Nice heads and fine condition were features. In both R. C. Brown and Buffs good size classes were shown, the Buffs showing good size and run of color.

**SEE AD ON NEXT TO LAST PAGE**

# FRENCH'S POULTRY MUSTARD

Patent Applied For

**ABSOLUTELY PURE**

**WE** SINCERELY regret being obliged to call your attention to the fact that certain unscrupulous supply houses, taking advantage of the demand that has been created for FRENCH'S POULTRY MUSTARD, have been substituting cheap and inferior Mustard products where the poultry fancier has only asked for "Poultry Mustard" or "Mustard for Chickens."

We have seen samples of some of these articles and they possess practically no value at all. FRENCH'S POULTRY MUSTARD is a scientifically manufactured article, containing the flours of different Mustard seeds, so blended as to produce the greatest strength in the volatile principle that is desired, and that is required to produce the fortunate results arrived at by Mr. Allen.

In asking for Mustard for this purpose, ask for FRENCH'S POULTRY MUSTARD. See that you GET French's Poultry Mustard. The name "FRENCH'S" will protect you and in the future French's Poultry Mustard will only be sold in original packages, under unbroken seal. Shipments in barrels and in 100-lb. packages will be shipped direct from the factory. All other packages will have our name and the seal unbroken.

Do not accept Bulk Mustard, and see that our label is unbroken.

Experiments were successfully made in England in 1909, 1910 and 1911 to stimulate egg production, increase vigor and fertility of fowls by the use of mustard. Send us your name and address and we will send you free of charge a copy of a pamphlet as edited by Mr. Ralph Allen, of Herts, England, the conductor of the experiments. The book contains a full account of the experiments extending over the years named, together with a number of testimonials of prominent American users of French's Poultry Mustard. The first issue of 20,000 copies was entirely exhausted within eight weeks of our first advertisement. The second issue is on the press, and contains added testimonials, and will be sent free on application.

French's Poultry Mustard is used and recommended by Edward Corning of the "Corning Egg Farm," Bound Brook, N. J., by "Corning himself," E. B. Thompson "Ringlets," Amenia, N. Y., The Urban Farms, Buffalo, N. Y., Grove Hill Poultry Yards, Waltham, Mass., Haldie Nicholson, Leominster, Mass., and by a great majority of the prominent breeders, and is sure to be used by all. The great egg farms use it regularly, pronouncing it invaluable.

**We are adding dealers daily. If your dealer does not handle it, send us his name.**

French's Poultry Mustard is an actual improvement upon the mustard used in England during these experiments. One teaspoonful of French's Poultry Mustard for every six fowls is the right amount. Mix it with the dry meal first and then add water until in a crumbly consistency. For Dry Mash use 1 pound French's Poultry Mustard to 200 to 500 pounds of feed

according to conditions and requirements of your stock. Mix with a small amount first then with the entire lot. French's Poultry Mustard can be obtained of any dealer for 20c per pound in 6 and 10-pound boxes, 25-pound kegs, or a sample package of 1½-pound can be had for 35c. If your dealer does not have it, write the R. T. French Co., mustard makers, Rochester, N. Y.

**"MUSTARD'S EFFICACY FOR INCREASED EGG PRODUCTION, FERTILITY AND STAMINA IS INDISPUTABLE"**  
**THE R. T. FRENCH CO., DEPT. A, ROCHESTER, N. Y.**

**S. C. Black Minorcas.**—It is seldom indeed that we see a class to match the one shown here. From first to last it was a hot one, with the birds seen in extra condition. The Hildorfer Black Minorca Farm, Saxonburg, Pa., winning cocks, first and second; hens, first and fourth; cockerels, first and third; pullets, first, third and fifth, and pens, first and second, making a clean-up sweep of it. Both the winning cocks were large and strong fellows, of proper carriage and ideal Minorcas in every line. The first hen was a sensational winner which also won the Champion Special for best hen in the show—a great female. First cockerel was a bird of wonderful style and true type, with a beautiful head. First pullet was a model in form and the best of color—fine head and great style. Both their winning pens were in a class by themselves, grandly mated and great winners. Manager Norman has done well to show a line of birds in such condition, and much credit is his due. This season also at the National Club Show this line won in a class of 199 birds. Cock, first and fifth; hen, second; cockerels, first and second; pullets, first and second; pen, fourth.

The Dark Cornish, while not an extra large class, was large enough to

show the quality to advantage. Mr. J. N. Hazlet, Marianna, Pa.; winning first cock, first hen, first cockerel and first pullet. This line has been a prominent winner for years and this season has won besides here, at New York and Boston.

The Mountain Orchard Farm, Bear-town, Pa., breeders of Houdans, Anconas, Lakenvelders and Buff Orpingtons, exhibited but a few of their classy birds here and won as follows: Houdans: Cock, second and fifth; hens, second and fifth; cockerels, first; pullet, second; Anconas: Cock, second and third; hens, first and second; cockerels, first and third; pullet, third; Lakenvelders: Cock, first; pullet, first; Buff Orpingtons: Hen, second; This line has had a very successful season and will be heard from in the future. Their plant is one of the largest and best in the world. They have the place and the stock and we will expect much of them in the future.

The B. B. Red Games shown by G. Wash Moore, made an exhibit the equal of which is seldom seen these days. Such games are of value and we hope to see more such classes.

A nice class of Black Leghorns was seen here, also some very fine S. S. Hamburgs. Campines were a fine class.

First cockerel and first pullet, two of the best we have seen.

In Bantams the display was large with all varieties seen, the Buff Cochins a Royal class, also the R. C. Blacks.

Pigeons, the largest display ever seen here, all varieties seen to advantage and the "Big Fellow" camping there with his own brother for added protection. There is enough in those two for a good sized family.

Turkeys, geese and ducks were out in force and filled the stage, as usual. The Runner and Pekin ducks, very fine.

The press fraternity was out in force here with W. G. Minich (Hamburg Bill) making his bow as a journal man with the Fancier. Think Frank will have to be good now, for "Bill" has some reputation. We wish him every success. Hewes and Crawford, of the Inland and Mrs. Frank Platt, of the R. P. J., Cavanaugh, of the Success, etc.

From every viewpoint this show was a pronounced success and of credit to the fancy. Others may come and go but this show with its years of valuable work and the history it has made will live to ever illustrate the real value of the fancy. It is a Fanciers show in name and in fact and its worth is felt far and near.

## BABY CHICKS—U. R. Fishel's White Plymouth Rocks the Best in the World

### RHODE ISLAND WHITES

A NEW FAVORITE WITH A REASON—At Chicago, December, 1912, in the largest and best class of R. C. Rhode Island Whites ever seen in any show room, McCarthy's Peerless Strain made a clean sweep, winning 1st cock; 1st hen; 1st pullet; 1st pen; \$25 cup for best display and \$15 cup for best shape R. I. White. As every prominent breeder, both East and West, had his birds entered at this show, it proves beyond a doubt that the Peerless Strain is the best in the world. Send for our illustrated catalogue and mating list and become acquainted with this grand new breed. **CARL D. MCCARTHY, Box Y, Kempton, Ind.**

## THE AMERICAN DOMINIQUE.

**T**HE very earliest settlers of America produced a fowl they called the "Dominicker" or Dominique. We do not know their exact origin. We find them referred to as prevalent in that district known as Bristol, Me., especially about the ancient settlement of Pemaquid, where even down to 1880 fine specimens of descendants of the originals were found. Also in Virginia we find where in 1895 they had been bred over one hundred years continuously on one plantation; and in the old Missouri settlements also, where there is still to be found good flocks of them. In an old history of Salem, Mass., they are spoken of as the prized fowl of the early days. Down to 1850 they were extensively bred,

DOMINIQUE COCK.

Bred, owned and exhibited by A. Q. Carter, Freeport, Me. Winner of blue ribbon at N. Y., Boston, Buffalo, etc.

but there was no real poultry fancy then as we now know it, and even to 1875, or a little later, a great many of the real old farms refused to displace them for some other breed, because of their proven productiveness. About 1850 interest was awakened in poultry generally by men of means, and in trying for new things crosses were resorted to, in one of which a Dominique was used, because of the known good qualities of the breed, with some larger bird, said to be a Java fowl,

and the result of this cross is the present-day Barred Plymouth Rock.

As a consequence of much striving for new varieties, the new breeds and those imported were talked and advertised extensively, and the old standards of our country were temporarily overlooked. Yet if one will but glance over the various accounts of productive poultry of the past one will not find a single adverse criticism of the genuine Dominique as a most productive fowl. Today ask such authorities as Messrs. Drevenstedt, Card, Ather-ton, DeLancey, Drs. Woods and Sanborn, Artist Sewell, and so on, and they will tell you that the genuine American Dominique is one of the few top-notch breeds for real usefulness.

If you ask why you have not heard more about them the answer is that the strict fancier, who shows and advertises, did not take them up, being satisfied with his income from the new-made and imported varieties. The very fact that the fanciers did not swallow them in a blessing in disguise, for we have them today in many localities true to their early breeding, and these hundreds of farmers would not consent to giving them up because of long years of proven ability to produce.

While looking over a pen of good old-fashioned Dominiques at the last Boston show a gentleman of three-score and fifteen years approached and said: "My mother and my grandmother, and I really don't know how far back, had Dominiques, and I also had them as a boy, and would have them now did I not live in the city."

"I am proud to meet you, sir, and won't you please tell me what you will about this breed of fowls?"

"Gladly, young man. I have always attended this show and have looked for Dominiques each year. I have seen some good specimens here, but not until this time have I seen a complete array of them throughout. Many in the past have shown too coarse bone, too much Barred Rock color and shape, too little tail, lacking in style, too heavy in type. I fear misguided ones have crossed with something else, but the Lord knows why they should! As a people we run to fads and fancies, young man, but experience levels and balances things in the end. It has been the same with cattle, and now we are finding out that some of the old-fashioned cows excel the much-touted

breeds as actual year-in and year-out producers."

"As you remember it, were the Dominiques kept quite extensively?"

"Bless you, yes. The neighbors all had them, or most all. Grandmother always insisted on seeing the new rooster—you know they swapped back and forth amongst the neighbors for new blood—and right up to the last year of her life she would have her say about the new rooster. We always had fresh eggs in winter, too, and the laid-down eggs were swapped with the peddler for goods or at the store, but they were sold for "laid-down eggs," not fresh. We always said the old Dominiques had Game blood in them, for they carried an abundance of rare flavor, and I recall my father saying he had rather have one for Thanksgiving than one of mother's turkeys."

"Were the Dominiques easy to raise?"

"Did you ever hear of a hen hatching out a batch of chicks in a hollow limb ten feet from the ground? Well, I must tell you we missed old Betty for days at a time, and finally I located her just two days before she came off with her brood. A big rotten limb had blown off the bitter-sweet tree in the old orchard and Betty had laid her clutch inside, with rotten wood for a nest. I wondered how she would get the chicks down, and mother set me to keep an eye on Betty and let her know when they hatched, but I missed the time and was completely dumfounded to see her on the ground under that limb with twelve chicks and she talking constantly to two others on the edge of the hole. I ran back to the house and got mother, and just as we got near enough to see one of those on the limb tumbled off and a little later, after much coaxing, down came the other, and Betty marched off with her brood all safe. Yes, they were rugged and great foragers; they would beat the old scratch for a bug, and friendly as could be, often picking at the brass toe-cap on my boot. They were about the color of a big hawk—gray—and would hide like a partridge. They made a handsome sight coming on the run at the call for supper—their wide tails up like a rudder, yellow legs flashing, red combs and wattles brilliant, the rooster's long tail feathers floating behind! A full grown rooster would weigh about six and one-half to seven pounds, no more, and a hen five to five and one-half, no more. They tell about double matings nowadays. Young man, I don't

**R. C. Caldwell** Ships Baby Chicks of Quality on short notice. See ad on page 653

## The World's Best Layers

Judging from recent tabulated records of all my yarded birds, I am convinced that my broad claims for

### Peerless Strain Exhibition White Leghorns

have been fully substantiated. Even matings 1 and 2, composed entirely of top-notch exhibition specimens, are laying better than my leading utility birds of former years. These two great yards are undoubtedly the strongest west of New York.

Watch for the "PEERLESS" pen at the Pacific Coast Laying Contest, Napa, California.

I can furnish you eggs that will do you a world of good, and if you want winners for Chicago, Boston, Philadelphia, Pittsburg, etc., write for special proposition on eggs from matings 1 to 5.

20 page mating list free. Fair treatment and satisfaction guaranteed. My prices are reasonable. Fifteen years with this one variety. Highest references furnished.

LEON C. HUNTINGTON

Box 12B

Omaha, Nebraska

believe in it at all. Our flock all looked alike at a little distance, the rooster being a shade or so lighter in color. Just a single mating, mind you!

"I've looked the breeds all over at this great show many years now, but if I had it all to do over again I would take the good old Dominique."

Misplaced awards at the shows have kept genuine Dominiques out of the show room, but they are coming in again because the American Dominique Club has been formed, and is going to see to it that Dominiques, not mongrels, win. Rose comb birds, barred up like Rocks, have won very often, under the judging of late years, because the Standard has been wrong in both picture and color clause. Some of the judges who know Dominiques were not misled, and placed awards right and we are pushing such judges on to our breeds in the show room. The day is passing when a Rose Comb Barred mongrel can win as a Dominique. The club is a member of the A. P. A. and the revision committee shows a fine spirit of co-operation. The next Standard will set us right.

A. Q. Carter,

Secretary-Treasurer National American Dominique Club.  
Freeport, Me.

#### BOURBON RED TURKEYS.

AFTER having decided to raise turkeys, the next question to be decided was the breed. The nearest neighbors on one side had White Hollands, and several other neighbors had undersized Bronze turkeys. After reading a number of articles on the subject,

the Bourbon Red was chosen as best suited to our needs. Our farm was small and poorly fenced, which made it necessary to choose a breed that would not wander far from home.

Forty eggs at thirty cents each were secured from a Northern Indiana breeder,

PENELOPE.

Rose Comb Brown Leghorn pullet, winner of first and all silver specials for best Brown Leghorn in large show. Owned and bred by W. W. Kulps, Pottstown, Pa.

who had won first prize on his Bourbon Reds at a poultry show the previous winter. After a journey of eighty-six miles the eggs were kept ten days before enough broody hens were secured to cover them. Two eggs proved to be infertile

and one got broken during the period of incubation, but the remaining thirty-seven each hatched out a healthy poult about the middle of June. These were given to three Rose Comb Brown Leghorn hens to brood.

The hardiness of this breed was proven to our satisfaction when the poult were about four weeks old. On reaching home a half hour after a drenching rain we found the turkeys apparently dead from drowning. Seeing that one or two still showed signs of life they were all hastily gathered up in baskets, covered them with dry woolen blankets, and put them near a hot stove. Within a short time the blankets were steaming and an occasional contented peep was heard. When the blankets ceased steaming every poult was found to be dry and happy, which was, indeed, a surprise, as the most of them had been picked up as dead. Not one died from the effects of this exposure.

Hawks got several of the young turkeys, the Leghorn hens being unable to protect them as a turkey hen would. When the turkeys were about half grown four were found dead under a box which had fallen on them when they sought shelter behind it from a severe wind and rain storm. Several more were lost from the effects of new corn, which was fed liberally as soon as husked.

In spite of these expensive losses \$26.47 worth were sold to a local meat market after selecting three of the best hens for breeders and one to eat. An account of the expense of raising these turkeys was kept and at the close of the year we had as clear profit the three hens we kept for

# WHITE ORPINGTONS

## Superb Type and Superior Quality

MY FIRST SHOW, 1912  
TEXAS STATE FAIR

1st, 2d and 4th Cock  
1st, 2d and 5th Hen  
1st, 2d and 3d Cockerel  
1st, 2d, 3d and 4th Pullet

Won at St. Louis, 4 Cock; 2 Cockerel; 1, 2, 4 Hen; 1, 4 Pullet; 1 Pen; and Several Specials.

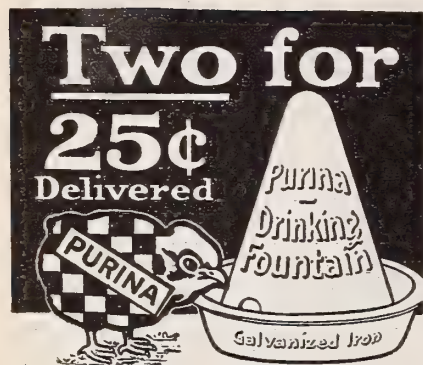

My birds are absolutely white, of that deep-bodied type, low down on legs, up to weight, and I know that I can please you.

The last time I showed at Madison Square Garden, 1911, I

again controlled the winning male birds. My winnings include first cock, third hen, fifth pen and the cockerel heading the first pen. The winning cock is, without doubt, the greatest White Orpington in the world, having defeated the Crystal Palace champion and all the great cocks of America. These great birds, together with my other prize winners, place Russell Cave White Orpingtons far in the lead. Both in Allentown and Augusta, two shows I made last year, I won at each the cup to that exhibitor whose ten or more birds of one variety showed the highest degree of excellence and uniformity of type and breeding. This record of winning in two of the most important poultry shows in this country the cup for the ten best birds has never been equaled by any breeder in America. **Great Stamina and Vigor** are to be found in my birds, not usually found in White Orpingtons. I attribute this to strong foundation breeding stock, our pure air and the blue grass range, 100 acres in Russell Cave Poultry Yards, and 8,000 acres in Elmendorf Farm. We still have a few more cockerels, pullets and hens at bargain prices. Eggs from the greatest of all matings, \$5, \$10 and \$20. **Duroc-Jersey Swine for sale.**

**Russell Cave Poultry Yards** Elmendorf Stock Farm  
Louis Lee Haggin, Prop. **R. 3, Box 1025, Lexington, Ky.**

**Usual price 25c each**  
but we offer *two* galvanized  
iron drinking fountains for  
25c as a special inducement  
to get you acquainted with

## PURINA CHICKEN CHOWDER

—a dry mash composed of alfalfa, corn meal, bran, middlings, granulated meat, linseed meal and charcoal, the great egg mash and

### GROWING FEED

for baby chicks. Purina Chicken Chowder produces tender and plump broilers at an early age and advances the egg laying period from 2 to 5 weeks.

Col. Purina says: "If Chicken Chowder won't make your hens lay, they must be roosters." Chicken Chowder makes fertile eggs for hatching and early broilers that bring fancy prices.

Clip Col. Purina's head from a bag of Purina Chicken Chowder and send it to us, with 25c, and we'll ship you the *two* serviceable, 25c galvanized iron, chick drinking fountains delivered by parcels post.

Purina Poultry Feeds are sold by the leading dealers and grocers. If your grocer cannot supply you, ask him to order a supply including Purina Chicken Chowder from his jobber.

### Poultry book free!

For your dealer's name I will send you this 48-page Poultry Book, containing plans of houses, breeding and feeding charts, space for daily egg records, cures of diseases, etc., and full instructions on how to successfully raise baby chicks. Write today.

**Col. Purina, Purina Mills,**  
801 South Eighth St., St. Louis

breeders and enough money to buy a tom from a noted breeder.

After three years of close culling and introducing new blood each year we are beginning the fourth season with a flock of large, healthy rich-colored Bourbon Reds, and have had no desire to change to any other breed of turkeys.

The best feeds for young turkeys are hard-boiled eggs, sour milk curds, steel-cut or rolled oats and boiled rice. Broken rice can be bought quite cheap, and it is claimed to be a preventative of bowel trouble. After the poults are two or three weeks of age they require very little food other than what they pick up on range unless the day be stormy, when they will remain near the farm buildings. The one food to be avoided for both young and old turkeys is corn. We feed

breeds and varieties of chickens, ducks, geese, guineas, etc.

#### CLASS B—COMMERCIAL EGG CLASS.

Open to any one not a student of the university; for the farmers and commercial egg producers especially.

Awards to be given to the highest scoring table eggs.

#### CLASS C—STUDENTS'.

Open to the students of Purdue University only.

(1) Freshmen in Animal Husbandry 16 only.

(2) For those who are members of any class or school outside of Animal Husbandry 16.

(3) For the co-eds of the university.

#### CLASS D—FACULTY.

Open to members of the faculty of the university only.

A trio of typical Barred Plymouth Rocks, as bred by W. D. Holterman, Ft. Wayne, Ind.

very little corn to our turkeys and only very sound dry corn at that. Turkeys should not be overfed at any age.

Otsego, Mich. Ella B. McNutt.

#### THE PURDUE EGG SHOW.

**T**HE fifth annual egg show at Purdue will be held the 7th, 8th and 9th of May, in the Agricultural building of the university. The show is under the management of the freshman class and is in the interests of more and better eggs.

Poultry associations and prominent breeders throughout the state are offering many valuable prizes, while the show committee offers sweepstakes, first, second and third ribbons. There will be no entry fee and all that is necessary to exhibit a dozen eggs is to write for a premium list with instructions for selecting eggs for show purposes, fill out the enclosed entry blank and send it to the show secretary. All judging will be done with score cards and will be solely in the hands of a prominent judge.

The exhibits will be divided into classes as follows:

#### CLASS A—GENERAL OR FANCIERS'.

Open to any one not a member of Purdue University, and for farmers and fanciers especially.

Awards to be given under this class for the highest scoring eggs of each of the

Awards under classes C and D to be given on the same basis as those under class A.

A number of the most prominent poultry and farm magazines have agreed to publish a full list of the awards after the show. All score cards will be returned to the exhibitor so that he may know just how his eggs were scored or cut, and eggs will be returned if desired, though the show committee guarantees that absolutely no egg shown will be used or sold for hatching purposes.

### Crown Bone Cutter

**FEED** your hens cut green bone and get more eggs. With a **Crown Bone Cutter** you can cut up all scrap bones easily and quickly, and without any trouble, and have out bone fresh every day for your poultry. Send at once for free catalogue.

**EMERSON TYPEWRITER CO., Box 1186 Woodstock, Ill.**

### ARNOLD ASKS FAIR PLAY FOR GOLDEN CAMPINES.

Aug. D. Arnold, Dillsburg, Pa.

IN the January number of the American Poultry Journal we notice an article written by Dr. J. H. Prudhomme that creates a false impression regarding those who judged the Golden Campines at the fall and winter shows, and also is unfair to the breeders and the breed. In the article in question he claims that judges should have disqualified all Golden males that showed red saddle hangers on backs, or in other words, red backs, and he claims the English Standard, by which all Campines are to be judged at this season's fall and winter shows, demands this. However, the Doctor is wrong in this, as the English Standard does not ask this either in Silver or Golden, so the

judges were right in giving the red-backed males prizes in absence of clean or hen-feathered backs.

If the Doctor's article would have appeared later we would have thought he got his ideas from the proposed Standard that was submitted to the members at the late club meeting at Madison Square Garden. This Standard had two disqualifying clauses that when applied to the Golden Campine males were simply an outrage. We refer to the disqualifications as refers to the backs of males: first, "two or more reddish bay saddle hangers on the back of a male;" second, "black or reddish bay bars of equal width on backs of males," to disqualify.

To show how ridiculous and unfair this would be when applied to the Golden, we will give a few facts as to the standing of the Golden Campines as found today in Belgium, England and America. A

little over a year ago the first Golden Campine was shown at the Crystal Palace show in England, and at that time the first hen-backed or hen-feathered male ever seen in Belgium, England or America was shown at the Palace and afterwards this bird came to America and staid here, and for which fact all Campine breeders shall be duly thankful. Eight or ten years ago the first hen-feathered male in Silvers made its appearance in Belgium and was put into the hands of English breeders, and in all this time England and America have been breeding for clean-backed males, yet at this time in all strains, including the "Improved Strains," will give us a goodly percentage of white-backed males. And we might state right here, judging from reports we find in the Feathered World (England) that the first prize Silver cockerel at the late Palace Show had

# E. B. Thompson's Imperial Ringle Barred Plymouth Rocks

Win the most wonderful record beyond all precedent in Barred Rock history at the imperial and most classic show of all America---Madison Square Garden, New York---this winter of 1913. Winnings as follows:

First prize, second, sixth and eighth on cockerels.

First prize and sixth on pullets.

First, second and fifth on exhibition pens.

First on cockerel mated pen.

Second, third, fourth and fifth on cocks.

The imperial prize of the show, sweepstakes special for champion male.

Sweepstakes special for champion female.

Diploma presented by the American Poultry Association for best cockerel.

Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety.

Challenge silver cup for best exhibition pen.

Special best shaped male.

Special best colored male.

Special best colored female.

Best cock, cockerel, hen and pullet. Four best cockerels. Four best pullets. \$25 special prize presented by the New York Show for finest display. All silver cups and cash specials. Four times

as many first prizes as any competitor. More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibitor of any breed.

My exhibit of 56 birds was the best the world has ever seen. No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My first prize champion cockerel and first prize champion pullet are years ahead of their time—they are the product of the highest skill.

No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world—sweepstakes champion male and sweepstakes champion female—at one show in Madison Square Garden.

"Ringle" First Prize Cock at Madison Square Garden, New York, 1910-1911

Amenia, New York

white hangers on his back, yet he won first prize in England's largest show.

Today we doubt if there are ten Golden Campine males in the world that really have clean hen-feathered backs, and we might cut that number in two. We just received a letter from a prominent breeder in England who claims first Palace Golden had a few suspicious feathers on his back, so taking into consideration these facts how very unfair it would be to at least for five years more impose such a Standard as the proposed one was, and we are glad to state that when it was submitted to the members at the late club meeting it was not accepted, and even those members who own about all the hen-feathered males in Golden would not hear to such unfair treatment.

As we were writing this article we received a telegram from the president of the Campine Club that we were a member of the revision committee, so we believe no one need fear that does not now own a hen-feathered male in Golden Campines, but let all select the best males you have and those that come nearest to clean backs, for there will not be enough

of these valuable hen-feathered males to go around for some years to come.

We do not wish it to be understood that we are in favor of a loose Standard for Golden Campines; we are in favor at this time to have as strict a Standard for Golden as for Silvers, but will stand for no such disqualifications as referred to in the article. After all it is true that the disqualifying clauses which appear in the Standard from time to time are the greatest nonsense we find in it, and it is a fact that almost all fanciers and judges think the same way as we do. Yet in some way or other they creep in any time. Cut strong for defects, but do not disqualify.

Now a word as to the Golden Campines. Think of it, only one year towards hen-feathered males and what a wonderful lot of birds at the late New York show. Give them as much time as the Silvers have had and see what we shall have. At the late Dairy (England's largest fall show) a Golden Campine pullet won special for best Campine in the show in competition with the Silvers. All who have a fine flock of Golden Campines this season have

a gold mine. We have bred them for over a year and find them the equals of the Silvers in every respect, and for hardiness they lead them. Give them a half chance and they will make good.

#### POULTRY BREEDERS' COLONY.

**R**EALIZING the value of co-operation among the poultry breeders, as well as other classes of producers, a movement is on foot to establish in one of the most favorable localities of the South a colony where none but breeders of pure-bred stock shall be raised. A number of poultry people from all over the country have been considering the matter and have expressed the opinion that the movement will be a success.

According to the plans formulated at the present time it is the idea to secure a large tract of land, subdivide it into 20, 40 or 80-acre tracts, to be used as homes for none but poultry people. In this way it is intended to establish a colony where by co-operation more can be accomplished than in any other way. It is believed that where so many combine as is possi-

## E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

This new 1913 championship record on opposite page is the most notable of all the thrilling achievements at Madison Square Garden for which E. B. Thompson's Imperial "Ringlets" are famed. This amazing record transcends all that have gone before it and makes my unequalled record for 25 years at Madison Square Garden all the more remarkable.

Furthermore—The "Ringlets," exhibited by me personally, have won at New York a grand total of 29 first prizes—more than double the number ever won by any competitor. No other Barred Rock breeder in the world has ever won more than 13 first prizes in the entire history of the New York show—**Mark the difference.**

The "Ringlets" have won every silver cup and trophy that has ever been offered at New York to be won three times—among them are the **\$100 challenge trophy and \$100 association cups.**

### If You Want To Win and Breed Winners

You must have my Imperial "Ringlets." It will be to your best interests to have my grand birds and eggs as a foundation and to improve your stock. The rich results of my more than 30 years as a Barred Rock breeder may be yours. My long experience has produced thousands of prize winners for myself and customers. I will help you to the best of my ability, rest assured of this.

Elegant breeding and exhibition cocks, cockerels, hens and pullets of the richest first prize New York blood for sale in any number. Show birds fit to win in any competition in any show.

Richly illustrated 70-page catalogue mailed upon request, it is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in the world, \$10.00 per setting; four settings, \$35.00; one hundred eggs, \$60.00.

"Ringlet" First Prize Cockerel and Champion Male at Madison Square Garden, New York, 1910-1911.

ble in this case it will be possible to obtain lands at wholesale prices, as it were, and thus benefit every one who joins in the movement.

It is a well-known fact that by co-operating many advantages can be gained that are not possible where attempted singly. For instance, such a colony as proposed would be able to obtain wholesale rates on every article necessary to be purchased, while they would also be able to fix prices in a certain way that would be better than each one could hope to obtain as an individual.

Suppose a certain percentage of the poultry breeders decided to produce eggs for the trade. Because of their co-operation it would be possible to make contracts to better advantage. If the breeders decided to make their colony the headquarters for the production of the best strains the possibility would be greater because of co-operation of their fellow members.

There are, speaking generally, about 60,000 breeders of poultry in the country, all scattered. Such a colony as proposed would give homes to from 1,500 to

2,500. These 2,500, with the backing of their co-operators, would be able to do more for themselves than the whole of the others. Their profits would be larger, because their operating expenses would be lower.

At the present time it appears that about 2,000 breeders altogether who have heard of the movement would become members of such a co-operative company. Imagine a tract of 2,000 40-acre farms, every one of which was devoted to the breeding of fine poultry. Would it not become immediately upon its establishment the center of the poultry world of the country?

It is believed by those who are interested in the movement that lands can be obtained now at lower prices than will be the case in a very short time. It is also believed that arrangements can be made whereby these farms can be paid for by installments, and that arrangements can also be made whereby each member can build his house on the installment plan.

At a meeting recently held Mr. L. Loys, of 1438 Pine street, New Orleans, La., was appointed secretary, and if any

one wants further information on this subject it is suggested that he be asked to furnish it.

#### NOT A CANDIDATE.

Despite the fact that I was not a candidate and did not send out even a postal and had not asked a single member of the Association to vote for me as a member of the Executive Board of the American Poultry Association, I received nearly 500 votes on the nominating ballot. I wish to thank my friends for this expression of confidence. I have served three years and tried to stand for what I thought was right. I have not been a candidate because I had any fear of being defeated, but because my own work is crowding me for time and I want others to share the honors and responsibilities of the Association. I am greatly interested in its welfare, and hope the policy of those who will be selected for positions will be broad-minded and progressive for it is the duty of this Association to foster all

## E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

Mr. E. B. Thompson:

Dear Sir:—From the Imperial "Ringlet" eggs ordered from you last Spring I have 23 of the most healthy and well marked birds, both in shape and barring that I ever had the pleasure to lay my eyes upon. Out of the 23 birds I have exhibited 13 with the following results:

At our Williamsport show in competition with 240 Barred Rocks, I won first cockerel on two entries. At Hughesville, Pa., showing 13 birds, I won 1st, 2d and 4th on cockerels, three entries; 1st, 2d and 3d on pullets, three entries; 1st pullet bred cockerel, one entry; 1st, 2d, 3d, 4th and 5th on cockerel bred pullets, six entries.

I have sold three of the cockerels at \$25 each and have refused \$150 spot cash for my first prize Williamsport cockerel, and \$50 for the other cockerel; I also refused a very flattering offer at Hughesville for my complete line of pullets. I must acknowledge the Imperial "Ringlet" strain is positively the best I can get. You may depend on me for a very substantial order very soon.

Yours truly,

C. E. Liebensberger.

Elegant cocks, cockerels, hens and pullets of the richest New York first prize champion blood for sale and mated to produce prize winners. I will take a warm personal interest in your success.

My "Ringlets" are wonderful layers of fine eggs as well as win the blue.

Richly illustrated 70-page catalogue upon request. It is full of illustrations of New York winners from life.

EGGS from the finest exhibition matings in all the world, \$10 per setting; four settings for \$35. One hundred eggs, \$60.

### The Finest Birds in All America Are Here on My Farm Today THOUSANDS IN NUMBER

The reason for my unprecedented winning at the last 1913 Madison Square Garden, New York, Show is very evident on my farm on all sides. See pages 713 and 714 for this wonderful record.

Emerson said:—"If a man can write a better book or make a better mouse trap than his neighbor, though he build his house in the woods the world will make a beaten path to his door." The path to my farm is well trodden by prominent breeders.

I invite you to come and see my Imperial "Ringlets" at home—on their native ground. A visit here will be a revelation in the science of Barred Rock breeding; you will see buildings full of the rarest of exhibition birds, and breeders full of New York First Prize blood, grand in size and shape, great length and breadth of backs and bodies, with tails carried right; splendid heads and clear blue color, with narrow, sharp, clean-cut vivid barring to the skin. You will see my wonderful matings that will produce the champion first prize winners for next winters shows. I now have on my farm five times as many first prize Madison Square Garden males as any breeder in America.

### I Will Sell You Eggs from the Finest Matings in All the World

There Is No Strain or Line That Can Win in competition with My Best Imperial "Ringlets"

Williamsport, Pa., Dec. 31, 1912.

branches of the industry. If I have the opportunity before my term expires, I expect to vote to open the Executive Board meetings to all members, and hope that the time will come when this is done. In my opinion, the next few years is certain to be a most critical time in the history of the Association. We need big men to safely and wisely mould the destiny of a big association and a big industry.

Thanking my friends throughout this country for the honors conferred upon me, I shall now be content to work as a private in the ranks of the Association, and do what I can in my feeble way to benefit the industry in Missouri and elsewhere.

T. E. Quisenberry.  
Mt. Grove, Mo.

### DESTROYED BY FIRE.

On the 28th of January a fire totally destroyed the home of Alfred P. Edge, at Darlington, Md., proprietor and breeder of the Darlington strain of Single Comb White Leghorns.

The fire originated in the cellar of the residence about twelve o'clock at night and spread with great rapidity. Mr. Edge and family escaped almost miraculously from their beds. Before the local fire department could get con-

Chicks 10 weeks old, weight 2¼ lbs. Hatched and raised by H. Dobbins, Pontiac, Mich., from S. C. Red eggs bought from A. A. Carver, Seville, Ohio.

trol of the fire the brooder house caught and the mammoth plant was wiped out. Fortunately the splendid flock of Single Comb White Leghorns was not harmed.

Many valuable records concerning chicks, collected by Mr. Edge, together with a portion of completed pamphlets on "How to Raise Day-Old Chicks" were destroyed. The printers, however, are getting out additional copies of this pamphlet, which will be forwarded to all those sending two 2-cent stamps for same.

Owing to the loss of his incubator, Mr. Edge will endeavor to fill all orders for hatching eggs and also has decided to greatly reduce his flock.

If any of the readers of this Journal have sent orders previous to the 28th of January, The Darlington Egg Farm would appreciate receiving confirmation of these orders, inasmuch as all such records have been consumed.

The many friends of Henry Steinmesch, St. Louis, Mo., will be sorry to learn that he has been dangerously ill with pneumonia the past month, and for this reason he notified the election commissioner, O. L. McCord, that he would not be a candidate for the presidency of the American Poultry Association at the coming election.

Our Catalogue No. 20 shows a complete line of incubator and brooder supplies, fixtures and repairs, and we have just issued a **Special Catalogue** describing a new line of labor-saving poultry yard devices.

Large Dry Mash Hoppers, Three Compartment Feed Hoppers for fowls, Grit and Shell

**The Oakes Manufacturing Co., Tipton, Indiana**

# Amatite ROOFING

## Why Practical Men Demand Amatite

**R**OOFING that needs paint every two years can't hold the market against Amatite—which needs no paint whatever.

Practical men know the great advantage of a roof that needs no painting. They know what a nuisance the painting is. They know how much it costs. They know how liable they are to neg-

lect to paint their roofs at the proper time.

Painted roofings are waterproof only where the paint is. Amatite is waterproof all the way through.

Amatite is sold in the usual convenient rolls of 110 square feet with a smooth lap where the mineral surface is omitted, so as to secure a tight joint. Nails and cement are packed in the center of each roll.

Free sample and booklet on request to nearest office.

## INTER-OCEAN EGG-LAYING CONTEST.

By John G. Poorman.

The second month of the Inter-Ocean Midlothian Farms egg-laying contest is over, and the results, as was expected, show a decided increase over January. The glory of the final day of February belongs to pullet No. 218 of Pen No. 4. She laid an egg at 9:15 a. m. and another one at 4 p. m. A similar occurrence may never happen during the entire period of the contest. The honors for the month of February belong to Pen No. 32, with a total of 104 eggs. This pen will receive the Inter-Ocean Bronze Medal and five Otis & Moe Drinking Fountains. The individual record belongs to hen No. 324 of this pen, with a total of 21 eggs. Pen No. 7, heretofore in the lead, has given way to Pen No. 32. There is a difference between the two pens of one egg. As individual breeds, the Houdans are making the poorest showing. It is hoped that they will soon show decided improvement. The following figures tell the tale. The first column is the total number of eggs laid the last week in February. The second column, the total number of eggs laid in February. The third column, the total number of eggs laid during January. The fourth column is the total number of eggs laid to date.

	4th week for Feb.	T.1. Feb.	T.1. Jan.	T.1. date

Total for two months.	3,737.			

Princess Montpyn on her estate, Argenteau, at Bartow, Fla., has started a large poultry plant and is going to specialize with the Buff and Black Orpingtons. She purchased at the Lakeland Poultry Show, Florida, the two first pens in these varieties from Wm. Cook & Sons, originators of all the Orpingtons, and also many more birds from this firm, paying \$750 for these pens. This is the first case we know of royalty poultry farming in America. Her Highness is known all over the world. She exhibited collie dogs and cows all over the world, at one time paying \$20,000 for a collie dog; but in spite of paying this price and other large prices for dogs she made money out of them. Next year her advertisements will appear in most of the poultry papers. We wish her every success.

## History of the Polish Fowl

By LOUIS A. STAHLER

THE REAL PLACE OF ORIGIN of the Polish fowl has never been ascertained definitely. At one time, they were called "Padua" fowls or "Polands," and many different reasons have been given for using these names. Other writers give as the probable place of origin, Russia, while still others say that they were originated in Holland.

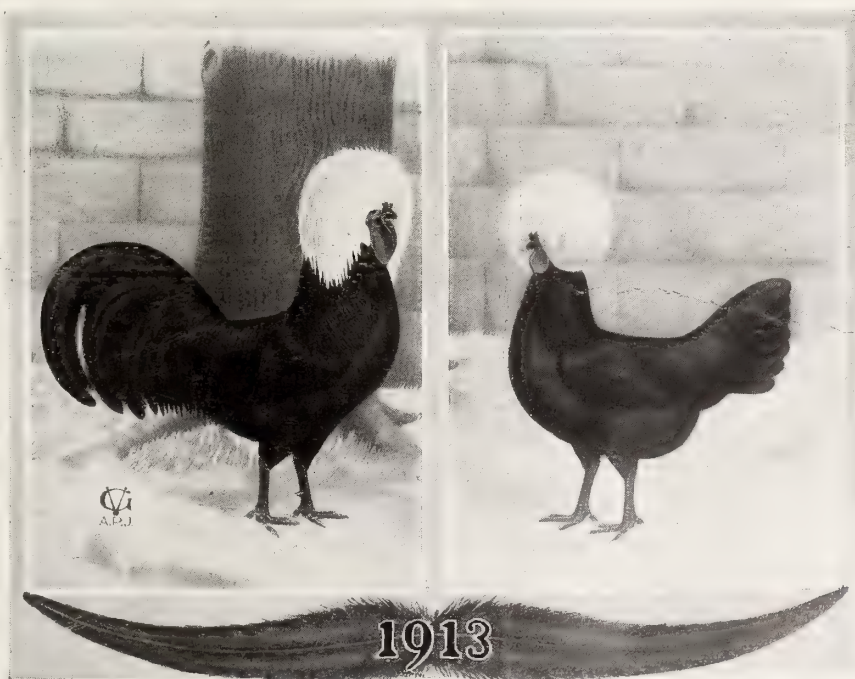

While it is true that many more crested varieties are bred in Holland and the adjoining countries, than in any other part of the world, yet it is more probable that the real place of origin of these fowls is Russia or some country which had a very cold climate. It is a well known fact that environment and climate will change not only the color but also the bone structure of fowls, and for this reason, we can readily accept the theory that the crest and foot feathering of some breeds of poultry came into existence as a protection against the cold. We have proof to a certain extent that there has been bred in Russia for many hundreds of years, a feather legged and crested variety of fowls known by the name of "Pawlona" fowl and as by selective breeding, it is a very easy matter to eliminate undesirable features in fowls, we can readily assume that when this breed was introduced into warmer countries, that feathers on the legs were bred out first and the size of the crest increased for beauty's sake. In Holland, the "Brabanters," a similar variety, have been known since the 14th century and according to noted authorities, such as Temmink, Cuvier and Latham, they have descended from *Gallus Gigantus* (Javan Cock). Woodcut illustrations in Aldrovandus book on "Ornithologia," published in 1600, show two crested fowls resembling to a certain extent the Polish of today, although his description of the birds does not fit any of the varieties of this breed as bred at the present time.

While the "Pawlona" fowls of the Russian and the Prabanter of the Hollander, have but small crests, yet

the formation of the skull of these fowls is the one great characteristic feature, but is not as pronounced as in the Polish. This protuberance of the skull is very pronounced in some of the varieties and reaches the extreme in the Crested Polish. This peculiar formation of the bones of the skull is visible already in the embryo in the egg after a week's incubation, and the young chicks when first hatched show it very plainly and by the size of this growth, birds can be selected that will have the largest crests. This peculiar formation was first discovered or rather published for the first time in 1656 by Peter Borelli in his work "Historia et observationes Rariores." There are many different crested or tufted breeds in existence, but speaking

of the Polish, it seems, according to authorities that the Silver and Golden Laced variety of this breed is the oldest in existence, and from which probably all other crested varieties of the breed were produced by selective breeding with, perhaps, an outcross to secure different colors.

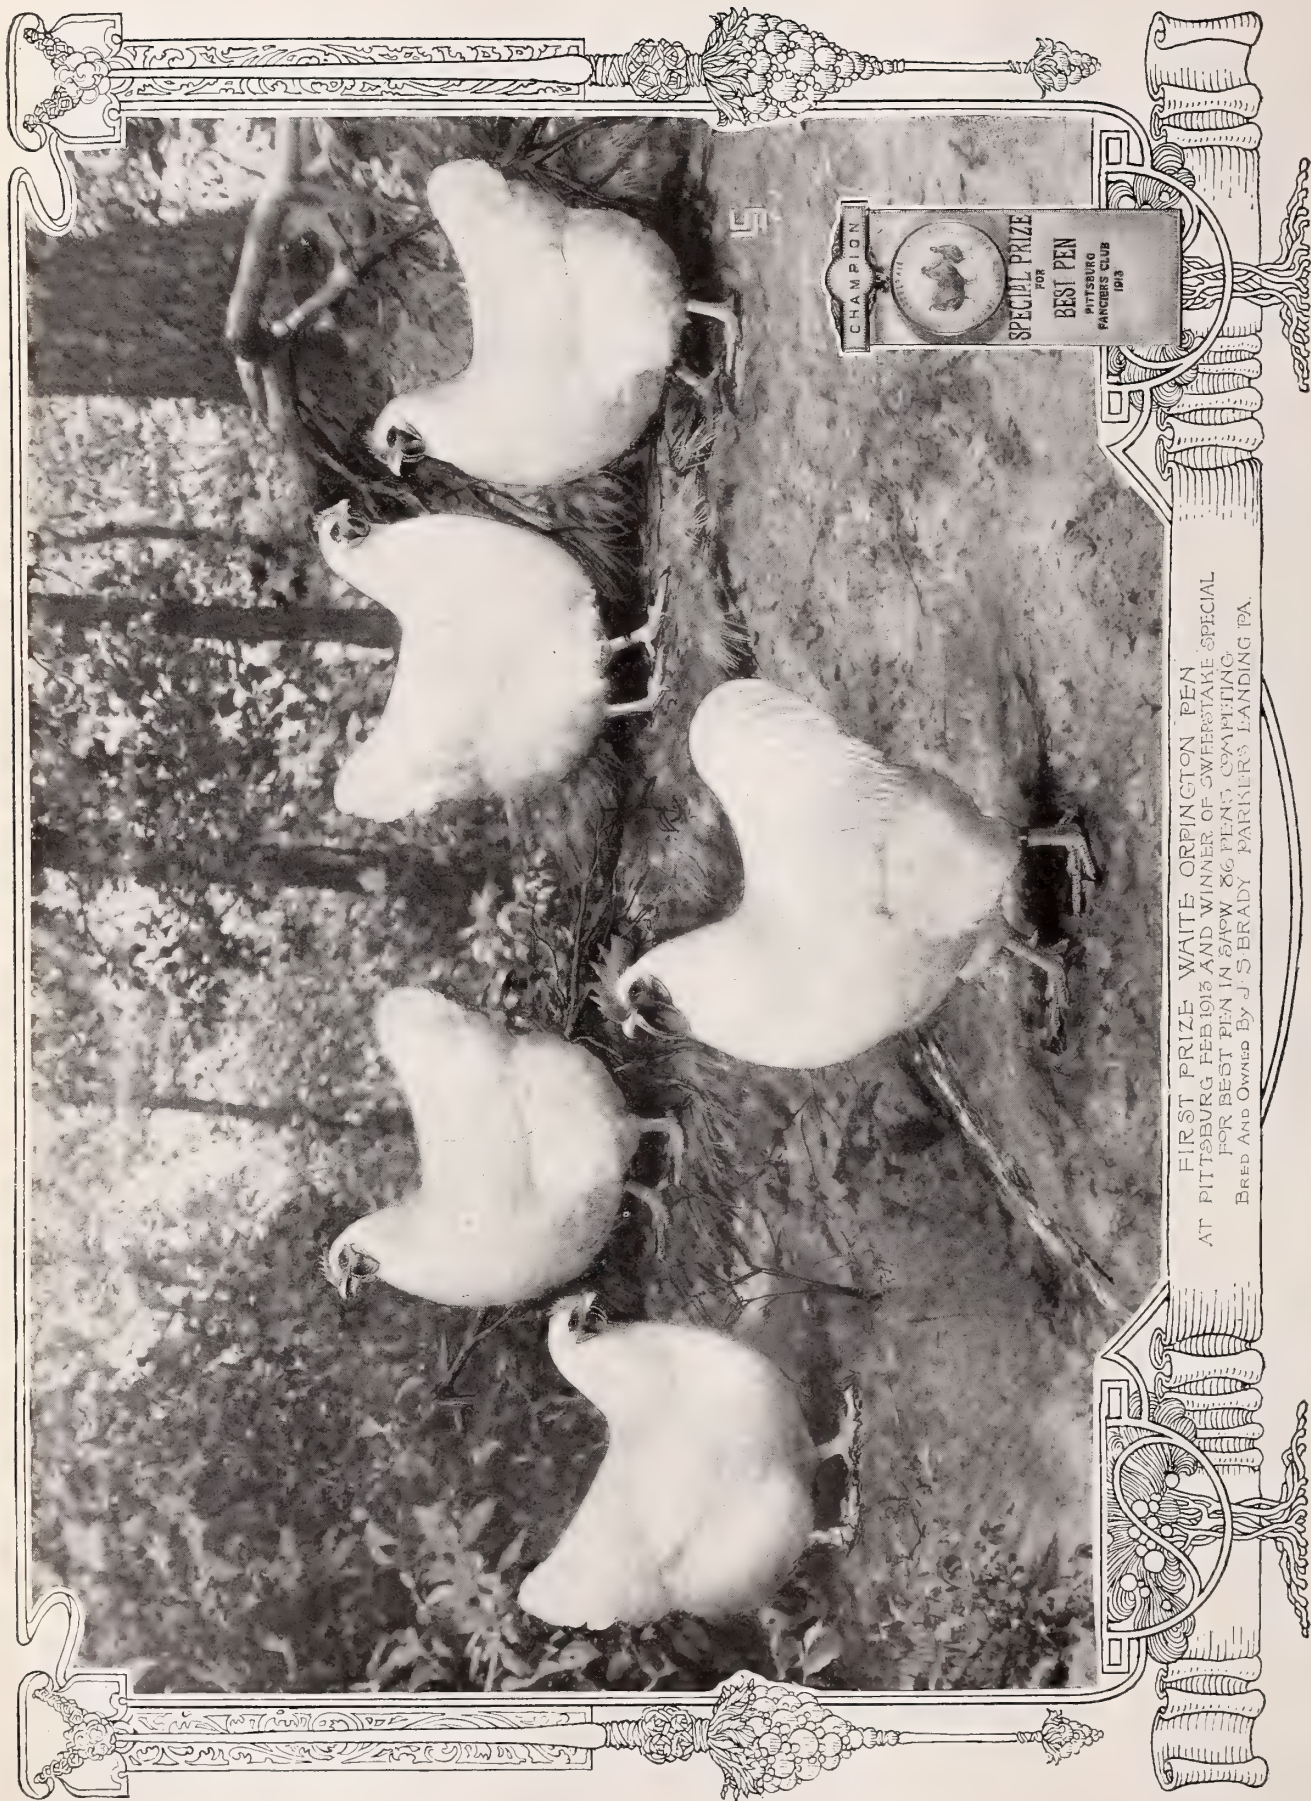

The varieties of Polish recognized by the American Poultry Association are the Bearded Golden, Bearded Silver, Bearded White, non bearded Golden, Silver and White, Buff Laced and White Crested Black. In Holland the breeders in addition to these have White Crested Blue, White Crested Barred, Buff Laced and White Crested

IDEAL WHITE-CRESTED BLACK POLISH

White. Yes, they even go further than that over there in trying to re-establish a Black Crested White variety, which has been extinct for many years, and I have seen an actual photograph of a first prize winner which showed already excellent type and a fine black crest. The last birds of this peculiar color were owned in 1854, says Mr. Louis Wright, by Mr. Brent of Saint Omer, but they seem to have died out completely. This new variety will make a handsome addition to the many different kinds already in existence and we hope that the Dutch breeder who produced this Black Crested White variety last year, has had good results and that he may be the distributor of this valuable new addition for the world at large.

CHAMPION  
SPECIAL PRIZE  
FOR  
BEST PEN  
PITTSBURG  
FANCIERS CLUB  
1913

FIRST PRIZE WAITE ORPINGTON PEN  
AT PITTSBURG FEB 1913 AND WINNER OF SWEETSTAKE SPECIAL  
FOR BEST PEN IN SHOW 26 PENS COMPETING  
BRED AND OWNED BY J. S. BRADY PARKERS LANDING PA.

White Crested Black Polish are good layers, non-sitters and can be kept on very little feed. They bear confinement very well and as for objects of beauty, as far as the poultry world is considered, they are in a class by themselves. Quite a demand has sprung up for this beautiful and deserving breed, and as this demand has increased competition in the show room, better looking birds are shown than ever before.

A remarkable Rhode Island Red possessing all desired qualities of the breed.

A Whatglen Farm Minorca, that approaches the ideal very closely.

The above pictured White Wyandottes, first prize winners at Boston, 1913, bred and owned by John S. Martin, of Port Dover, Canada, will long be remembered by those who saw them. The remarkable neatness and smoothness of plumage in addition with the

# CHICK CHATS

by H. P. Schwab

April 1. Don't slip.

\* \* \*

The breeding season is in full swing.

\* \* \*

Early chickens are all right for layers next winter and for the real early shows and fall fairs, but for next winter's show birds give us the later ones for results.

\* \* \*

The A. P. A. nominations are made and the grand old ship of state is safely free from the rocks again.

\* \* \*

Mr. E. B. Thompson, as the "breeders' candidate" for president, polled a grand vote, considering that but few knew he would accept office.

Mr. Thompson has consented and if elected will make an ideal official. We think it time the A. P. A. had a breeder for president. There is no sense in the journal men hogging it all simply because they have the press with them to plead their cause.

\* \* \*

The election ballots will soon be mailed out. Vote! It is every member's duty to vote his ballot just as he thinks best.

\* \* \*

Secretary Campbell's vote is a glowing tribute to a faithful official.

\* \* \*

Mr. C. D. Cleveland and U. R. Fishel also seem certain of election to the ex-

ecutive board. Both are very capable and will make desirable officials.

\* \* \*

Canada should have a representative on the board. Judge Richard Oke, of London, Ont., is a man of worth, for there is no better posted poultryman.

\* \* \*

Atlantic City, N. J., has the call for the meeting. The ocean breezes have no doubt been considered. They are ideal in August.

\* \* \*

Boost, boost, boost!

Early and often and late;

For e'en in the foe

There is something, you know,

That 'tis better to love than to hate.

Seek then the good in all;

Find it—'tis there—and boost.

Thus on this earth,

You'll double life's worth,

And up with the heroes roost!

\* \* \*

Breeders, mail me your circulars and catalogues. I wish them for mention and for future reference.

\* \* \*

The Williamsport (Pa.) Association will hold their sixth annual exhibit November 25 to 28, 1913. The judges are Richard Oke, J. C. Punderford, Chas. Nixon and H. P. Schwab. This is the

big early show. Remember the dates. Mr. McCormack Dawson, No. 200 Market street, is the secretary.

\* \* \*

We regret that in our report of the Palace (New York) Show we omitted to mention the winnings of Wm. Cook & Sons, Orpingtons, Scotch Plains, N. J. We give them elsewhere in this issue. The trouble is this firm has won so much the past season it is difficult to chronicle all, but we will try.

\* \* \*

Mr. Henry D. Riley, Strafford, Pa., Barred Rocks have made a unique record the past season. Birds hatched from his eggs sold won 1st cockerel at Boston, 3d cockerel at Madison Square Garden, New York, 1st pullet at Chicago, 1st and 3d cockerels at Guelph, Ont., with 69 competing, etc. Such records tell the whole story of a breeder's way of doing business.

\* \* \*

The Pittsburg Fanciers' Club Show as usual closed the season. It was a fitting climax to a great season. The show was a brilliant success.

\* \* \*

Note our mention of the Aldrich Poultry Farm in this issue. Visit that farm and see for yourself quality that no pen can describe.

\* \* \*

Eggs are hatching unusually good this spring and a great season is ahead, with the breeders full of confidence.

\* \* \*

Look the ads over and send in your orders for eggs. Improve your stock this year and every year. Investment in choice eggs is the best we know of.

\* \* \*

D. W. Young's catalogue received and

WINNERS OF ALL REGULAR SPECIAL PRIZES IN WHITE LEGHORN SHOWS AT BOSTON, CHICAGO, AND NEW YORK

# SILVER YWANDOTTES

I have for sale a choice lot of cockerels and pullets bred from my Chicago, St. Louis, Springfield and Kansas City winners. Also some one-year stock. Eggs from pens headed by these noted winners, \$3 per 15, \$5 per 30, \$7 per 45, \$12 per 100. Mention American Poultry Journal.

**August W. Schroeder, Route 1, St. Peter, Illinois**

# Columbian Plymouth Rocks

The type I breed is the big boned Rock type. Winners at Chicago, New York, Philadelphia, Etc. Splendid matings. Eggs, \$3.00, \$5.00 and \$10.00. Circulars free.

## S.C. BROWN LEGHORNS

### ONLY THE BEST — PRIZE WINNERS

The kind of birds the fancier loves to raise. I won 1st on cockerel, 3d on cock, at the Boston show, 1907; 2d and 5th cockerel, 3d and 5th cock, 3d and 6th hen, Boston, 1908; 1st on cock, 3d on pullet, at Madison Square Garden Show, 1905; 1st on cock, 2d and 3d on cockerel, 1st on pullet, 1st on pen, and 10 special premiums at Chicago show, 1905, winning fifteen prizes on eight birds. At Chicago, December 1909: 1st and 2d cock, 1st and 5th cockerel. First cock, 1st cockerel at the Great Chicago Show, 1910. Chicago, 1911, 1st cockerel, 2d cock. A choice lot of show and breeding stock. Circular showing my winnings free. Write now. Address

**W. H. WIEBKE Box P 348 FORT WAYNE, IND.**

as usual is most interesting. His S. C. White Leghorns are better than ever. We will write them up soon.

Secretary H. D. Riley, of the Barred Rock Club, has mailed out the club report with list of new officers, etc. The club will issue a catalogue and requests all breeders to lend their aid. Join the club now and have your name among the members. All helps.

Mr. A. Q. Carter, Freeport, Me., exhibited at Berlin the real quality in American Dominiques and won about all that was offered. His line has the correct type and quality desired, which has made this variety a great favorite for so many years.

Houdans are also one of the old favorite varieties of quality. We hope to have some excellent articles on this variety in the future.

The Dorkings are another staple variety that we would like to see boomed. They are a breed of worth. The A. P. J. will gladly do its share if the breeders will aid. Write me.

Note in our report of the Pittsburg show the winnings of J. S. Brady, Parkers Landing, Pa. It is a glorious record for S. C. White Orpingtons.

The best advice is—don't give any.

We never can retrace our steps, but we can pick a better path from now on.

The Hilldorfer Black Minorca Farms at Saxonburg, Pa., are a busy place with Manager Norman in charge. Their wins at Pittsburg and Baltimore did it.

When a man agrees with you at all times look for the ax he has to grind.

The Great Hagerstown Fair will be held October 14 to 17, 1913 with Mr. W. F. Spahr as secretary. The greatest fall show of the whole world.

When you feel a cranky spell coming on go out and hunt a grindstone.

Rankin's Reds did the trick again at Pittsburg. To win specials for best cockerel in the show at Philadelphia, Cleveland and Pittsburg is some record. His winning S. C. Red cockerel was worth all he received.

Prepare early for next season's shows. We should have more shows early in November, for all breeders have birds at their best then and look to make early records. As things now are the season is too short and the shows crowd each other.

Exhibitions to open Thursdays with judging days Friday and Saturday are deservedly very popular. They close the following Wednesday and all birds are back home in good season without the usual Sunday lay over on the road. Here is a plan for consideration that has been followed by several for years with success.

We hope for our next to have a review of the show season which has been the grandest in history and has illustrated many lessons of note.

We have received catalogues from the following besides those mentioned:  
C. H. Welles, Stratford, Conn., Barred

## MAPLEWOOD POULTRY YARDS

**H. W. HAYNER, SUPERINTENDENT : ATTICA, NEW YORK**

Again sweep the deck by winning the two most coveted prizes at the big Batavia Show (over 1300 entries), Jan. 22d to 27th, 1913.

### SILVER CUP FOR BEST MALE IN SHOW

(Won by 1st S. C. W. Leghorn Cock)

### SILVER CUP EXHIBITOR WINNING MOST POINTS

13 firsts, 14 seconds, 13 thirds, 8 fourths, 4 fifths and other specials too numerous to mention. Why not buy stock, eggs and chicks from a Farm that has proved its superiority and sells at reasonable prices. Send for catalogue and mating list of S. C. W. Leghorns, White Wyandottes, Pekin Ducks, Indian Runner Ducks. Stock and eggs for sale. Baby Chicks a specialty. Send for list of Winnings at Syracuse State Fair, 1912, International Show, Buffalo, 1913.

It assures absolute satisfaction to the customer. That is why we sell half our stock in advance to old customers—those who have been well pleased with the vigor and quality of our

## White Leghorn Chicks and Breeding Stock

We have a mammoth incubating capacity of 60,000 eggs at one time. Our cellars, brooders, ranges and houses are faultless in construction and efficiency. They are built right and managed properly.

Our stock is vigorous, heavy laying and possess the stamina that comes from years of intelligent breeding. Our birds are clean, trim—they show **QUALITY**, always!

Write for our catalog. It will save you money. It contains full description and prices. Free on request.

**MICHIGAN POULTRY FARM**  
LANSING, MICH.

Detroit, Mich.  
Dec. 29, 1912.

Chicks received in June, 1911, began laying at 5 months of age. In severe winter 1911-12, pullets from these produced 40% yield. They averaged 170 eggs in that time. (10 months.)

Chicks received in March, 1912 began laying at 18 weeks old and at 5 months 85% of pullets were laying. They laid during their fall pullet moult.

Chicks received in June 1912, were not let lay until 5½ months old. In Dec. they averaged a 50% yield. Never had pullets lay such fine eggs.

**PAUL ELLIS,**  
339 Lycaste Ave.

# The Great Baltimore Show

Although Conflicting in Dates With New York was  
Larger than Ever.

By H. P. Schwab.

IN the Fifth Regiment Armory, Baltimore has the best show hall in the country. In size and light it is second to none, and the officers and members well know how to coop and place the show and to decorate it with state colors that add beauty and make it the attractive exhibit it is. Mr. Geo. O. Brown, the faithful secretary, with President Riggs, was in charge and as usual from every viewpoint the show was a pronounced success.

## Barred Plymouth Rocks.

The Barred Rocks have always been popular here, and while not as large a class this year as in the past, it still was a good class of quality with several good breeders showing. Mr. R. J. Walden, Middleburg, Md., also showing at the Great New York show the same time, won here cock 3d, pullet 2d, pullet bred cockerels, 2d and 3d.

Brooklandwood Farms winning hen 1st, cockerel 1st, pullet 1st.

W. G. Boileau, cock 2d, hens 4th and 5th, cockerels 2d and 4th, pullets 3d and 5th, pen 1st.

O. C. Boileau, cock 1st.

White Plymouth Rocks were a quality class and the best of competition was had here. Mr. Alexander R. Early, Roslyn, Md., won cock 1st, hen 5th, cockerel 3d, pullet 1st, 3d and 5th and pen 2d. The first cock was one of rare beauty and the sensation of the class.

The Rockland Farm winning cock 2d and 3d, hens 1st and 3d, cockerels 1st, 2d and 5th, pullets 2d and 4th, making a fine display of dandy birds.

In Columbian Rocks most of the leading prizes went to L. P. Graham, Collingwood, N. J. He is a "Flea" of note.

Partridge Rocks, a beauty class, with

W. F. Presgrave winning cock 1st, pullet 1st.

The Silver Laced Wyandottes were

Mr. Hall's display of Barred Plymouth Rocks at the Illinois State Show, January 6 to 12, 1913, created a most favorable impression regarding the quality of the stock bred by him. His first prize cockerel, pictured above, was of good type and showed ringlet barring to a marked degree. His mating list gives full particulars regarding his excellent matings for the present season.—I. W. Burgess.

Mr. Hall also won first pullet pen and special second cockerel-bred hen.

one of the largest classes of the show and with T. K. McDowell, W. D. Kinsell, C. S. Shirk, Silver Brook P. F.

and Harry Wetzel the leading winners. Golden Wyandottes also a large and rich class.

White Wyandottes, a class of good numbers and very uniform quality. Here the prominent winners were J. J. Farrell, Dr. C. S. Bowers, E. R. A. Litzen, E. M. Mellor, A. M. Knapp, Spring Valley P. F., Samuel Little and Mrs. L. Tarber & Son. Columbian and Partridge Wyandottes well shown.

S. C. Reds—a record class and as usual very strong; a nice lot of quality here. The Rose Combs ran close in numbers and up high in quality. Both grand classes and birds well shown.

S. C. Buff Orpington—a class of extreme beauty and of rarest competition, the Sunswick Farms, South Plainfield, N. Y., making a great record and one of extreme value. They won cock 3d, hens 1st, 2d and 5th, cockerels 1st, 2d and 4th, pullets 5th, pen 2d, with several specials. This line, with all their winnings at New York, Boston, Allentown, etc., have never won more credit or have ever shown better birds than they displayed here.

Henrietta E. Hooker, South Hadley, Mass., won cock 1st, hen 4th, cockerel 5th, pullet 4th and pen 1st. This is another of the reliable lines that have been shown with much success for many years past.

The Dunrobin Farm, Red Bank, N. J., in Buffs won: Cock 1st, hens 3d, cockerel 3d, pullet 2d and pen 2d. In White Orpingtons: Hen 5th, cockerels 1st and 4th, pullet 4th, pen 2d. In Buff Orpington ducks: Old drakes 1st, 2d and 4th, ducks (old) 1st, 2d and 3d, drakes (young) 1st, 2d and 3d, ducks (young) 1st, 2d and 3d, all in hot classes.

In Black Orpingtons Maj. Hugh A. Rose, Fonthill, Ont., split his string between New York and this show, winning here: Cock 1st, hen 3d and 5th, cockerels 1st and 2d, pullets, 1st and 3d, pen 2d, with specials. Both his winning cock and cockerels were birds of great value and merit. Birds of this line have made

## GOWERN'S SINGLE COMB WHITE LEGHORNS

SENSATIONAL PITTSBURG WINNERS five consecutive years, First Pen Pittsburg Exposition Show 1913, 25 pens competing. First and Second Hen pronounced perfection. Have sold winners this and other years for Pittsburg and other great shows. Eggs \$3.00, \$5.00 and \$10.00 a setting. Mating list free.

W. J. GOWERN, JR.,

Dept. A,

CANONSBURG, Pa.

## Wolfrum's S. C. White Leghorns

Won at Cleveland Great Fanciers Club Show, January, 1913, 1st cock, 1-2-5 hens, 1st ckrl, 1st pullet, 1st pen and best display on ten entries.

Never defeated in show room, bred from 196 to 238 egg hens, for fine combs, long backs, low tails and blue-white plumage. Your name brings our egg matings.

GEORGE W. WOLFRUM,

Box 392,

Carey, Ohio

# A BUSINESS OPPORTUNITY!

One of the leading and best paying Poultry Journals in U. S. has been placed in my hands for sale. Present owners are retiring from publishing business. If you can command the necessary capital, this is a splendid opportunity to acquire an established enterprise actually producing big profits. Address for full particulars

S. E. H., BOX 715 Care AMERICAN POULTRY JOURNAL CHICAGO, ILL.

the rounds this year and at a dozen shows have been leading winners.

The Aldrich Poultry Farm, Columbus, O., was here strong in White Orpingtons, winning: Cock 1st, hen 1st, cockerel 2d, pullet 2d, pen 1st. This record was made on but one entry in each class. That surely is picking them. They were also showing at Madison Square Garden, New York, at the same time and winning well there with pen 1st, etc. Their first cock, an exceptional bird of value, well shown and with elegant types and color.

Mr. L. L. Haggin, Lexington, Ky., another breeder of note of White Orpingtons here, won: Cock 2d, hens 2d and 4th, cockerels 3d, pullet 3d, pen 3d. Birds in splendid condition and of great worth.

Our old friend, F. E. Gilbert, with his Congo Black Orpingtons was showing but a few birds here winning: Cock 3d, cockerel 3d, pullet 2d and pen 1st. This line has been long and favorably known and has produced a great many winners for the past several years.

Black Langshans were another of the great classes seen here, with 108 birds shown. It is very seldom we see such classes, and we hope for more of them, as they are a valuable variety. Mrs. Littlefield, Middleburg, Md., winning: Cock 5th, cockerel 1st, pen 3d. First cockerel a bird of best form, color and style and carriage, with fine head.

Other winners here were W. F. Uresgrave, H. J. Reitz, Wm. Lauterbach, Elm Poultry Yards, R. B. Johnson, Norman Rice, Carroll Menefee, etc.

In S. C. White Leghorns and with 183 birds seen it was a royal class of merit, the Spring Water Poultry Farm, Stockton, N. J., winning: Cock 2d, pullet 1st and pen 5th. Very sweet for this competition, the winning pullet a bird of finest class and shown in wonderful condition, and a "lady" did it. Other winners here were the Dunrobin Farms, Red Bank, N. J., the Endicott, Jr., Caw-Law Poultry Farm, Gillingham Farm, J. A. Abrecht, T. C. O'Byrnes, C. J. Eitenmiller, Clemeus B. Krogman, W. F. Lantz, etc.

The Hildorfer Black Minorca Farm, Saxonburg, Pa., made a beauty record with their line of S. C. Black Minorcas. This was the club show, and a great quality class was out, with Mr. Frank McGrann judging, and as usual giving the best of satisfaction to all. Mr. Hildorfer won: Cock 1st and 4th, hens 2d, cockerel 1st and 2d, pullet 1st and 5th, pen 4th, and many specials. This is another of our old reliable lines.

Other winners here were Dr. Howard Mellor, N. E. Kirk, New York & New Jersey Poultry Farms, Brish Bros., Edw. Kress, R. Moreland, S. H. Fox, etc.

Houdans also a large and beauty class of worth well shown. Here was seen many birds of exceptional value, making an attractive class.

Other classes up to standard made it a very complete exhibit in every way.

H. P. Schwab.

Sonoma county has taken the lead among the fifty-eight counties of California in number of fowls owned, in annual egg production and in value of poultry and eggs produced, according to figures compiled by Secretary of State Frank C. Jordan. The number of fowls raised in the county in 1912 was 1,512,601 and the egg production amounted to 9,470,880 dozen, or 113,650,560 eggs. The total value of the poultry and eggs produced was \$3,038,518.

# Current News of the Poultry World

by J. F. Shureman

The Kansas State Senate has recommended the passage of a resolution calling for an investigation of the poultry industry of that state. It is estimated that the production of poultry and eggs in the state amounts to \$30,000,000 annually and that there is a preventable loss of \$5,000,000 each year.

State Superintendent R. W. Wilson of the public schools of Oklahoma has written the county superintendents of the state requesting them to urge upon teachers the organization of poultry clubs among the boys and girls. Last year 2,060 boys and girls between the ages of nine and eighteen engaged in the poultry contests for the prize of \$50.00 offered for the best pen of Barred Rocks. This year a prize of \$25.00 is offered.

Miss L. C. Harding, secretary of the Omaha board of trade, has a poultry farm worth \$23,000, and last year she cleared \$4,765 on her poultry and eggs. Nine years ago she had just \$40 and a job in a business office. She invested that \$40 in a small poultry house, a dozen hens and a male bird. From this small beginning her business has grown to large proportions, her equip-

ment including a 6,000-egg incubator. She is planning on a 10,000-hen flock for egg production. She still holds her position in Omaha, hiring a manager and the necessary help for her poultry farm.

J. M. Kienig, proprietor of the Park Place Poultry Farm, Rittersville, Pa., has sold his entire flock of Golden Laced Wyandottes, including all his prize winners, to F. A. Erwins, proprietor of the Elmhurst Poultry Yards, Bethlehem, Pa.

The Food Research Laboratory of the Bureau of Chemistry, heretofore located at Nashville, Tenn., under the direction of Dr. Mary E. Pennington and Prof. H. C. Pierce, is to be removed to Sedalia, Mo. The work of the laboratory consists of studying the marketing of eggs and poultry from the producer to the consumer.

Fifty to seventy-five acres will be required for the proposed poultry breeding farm at the Oregon State Agricultural College, the purpose of which is to supply the farmers of the state with stock from prolific egg-producing flocks. About \$12,000 will be expended in equipping and stocking

the farm and it is anticipated that it will be self-supporting.

A six-weeks' course in poultry culture is being conducted at the Dayton, Ohio, Y. M. C. A. Prof. W. W. Weaver, of Yellow Springs, O., is the instructor.

Members of the Castalia Vigilantis of Ohio, organized eighteen years ago to wage war on horse and cattle thieves, met in Sandusky recently and amended their charter in such a manner as to enable them to go after chicken thieves also.

The Hen-E-Ta Bone Company, which operates three big eastern factories, has opened a branch factory at Springfield, Ill. A \$100,000 factory building will be completed within the next year and it is expected that the output will be at least two carloads a day.

A poultryman in Pennsylvania recently claimed that he had a hen that laid two eggs in one day, five hours apart. J. C. Punderford, owner of the Monmouth Farms, says he has the Pennsylvanian beaten, as one of his pullets on February 15 laid two eggs during the morning, one at 8:30 and

SAG HARBOR, N. Y.

## JEFFERSON'S White Runners

Win where quality counts—never defeated. At the greatest show held at Madison Square Garden, Dec., 1911, our ducks controlled the highest winnings. Our winnings include 1st cockerel, 1st pen, second pullet.

At Southern International Show, Atlanta, Ga., Dec. 16-21, 1912, our Madison Square Garden 1st cockerel won first cock. Also won 1st cock at Savannah, Ga., Nov., 1912. This winning cock is without doubt the greatest white runner in America. He heads our all-prize pen this season. These great ducks, together with our other prize winners, place Jefferson's White Runners far in the lead. Our string of winnings at Chicago, Cleveland and Savannah include many firsts.

Eggs, \$5.00 per 12, \$8.00 per 24, \$15.00 per 50, and \$25.00 per 100. Why pay more, we guarantee satisfaction. Stock for sale.

Jefferson Poultry Farm, Albany, Ga.

Citizen's First National Bank Bldg.

the second one at 11:30. Mr. Punderford says there can be no mistake about this, as the pullet was trapped and he personally took her off at the times stated.

The Park Ridge School of Poultry Culture, Chicago, has been incorporated by C. O. Westphal, Willis Melville and A. Murphy. Its purpose is to teach poultry culture by correspondence.

A poultry census of the state of Minnesota is soon to be taken under a new plan, according to Prof. N. O. Chapman, of the poultry division of the State Agricultural School. The plan is to have the teachers in the public schools of the state take charge. There are 8,000 of them and they will be requested to have each pupil report the number of chickens at his or her home, these reports to be forwarded to Mr. Chapman.

John O. Gabriel for over thirty years one of the leading poultry breeders of Pennsylvania, and famed for the past dozen years or more as a breeder of

Brooder house on Lawrence Jackson Farm, Haysville, Pa. 600 little chicks inside at time picture was taken.

Rhode Island Reds, has sold his Overlook Poultry Farm at Summit Lawn to Ray Brown, of Allentown, Pa., and will retire from the poultry business.

Otto Hornberger, of Ashland, Ohio, a poultry breeder, recently found a safety pin inside of a hard-boiled egg he was eating.

Dr. Cornelius J. Andrus, of Canandaigua, N. Y., a well-known poultryman and prominent in his home community, has filed a voluntary petition in bankruptcy in the United States District Court at Buffalo. His liabilities aggregate \$9,019.70 and he claims he has absolutely no assets.

An attraction at the Bloomington, Ill., poultry show was a "female rooster." The bird had every appearance of being a male bird, but its owner stated positively that it was a hen, and to make the owner's word good the bird laid several eggs during the show.

**ADJUSTABLE CLINCH — NO BETTER Poultry Leg Bands Made**  
25, 20c; 50, 35c; 75, 50c; 100, 65c; 200, \$1.00. No stamps taken. Frank Cross, Manufacturer, Box 506, Montague, Massachusetts.

**BUFF & COLUMBIAN WYANDOTTES**

## HOUDANS AN EXCEPTION.

By I. H. Smith, Sewickley, Pa.

**T**HE true fancier's ambition should be to combine in his breed or individual family the greatest number of commercial and popular characteristics of our many varieties. When he accomplishes this purpose he produces an exception which is the most valuable fowl for you.

Let us accept the classification of poultry as outlined by the United States government in their Bulletin on Varieties. You will find four general classes. The egg breeds, which are non-setters and layers of white-shelled eggs, are best illustrated by the Minorca, Leghorn and Hamburg. The utility breeds, or general purpose fowls, comprising Rocks, Dotts, Reds, Orpingtons and similar valuable varieties, are, with the exception of the Houdan, very persistent setters and layers of brown-shelled eggs. The meat breeders, such as the heavy Brahmas, Langshans and Cochins, are similar to the utility class, for they also are persistent setters and layers of brown-shelled eggs. The last class of ornamental varieties can scarcely claim any distinction over the Houdan.

are hard to confine, and by reason of their large combs and light feathering do not take kindly to cold weather, when fresh eggs bring such a premium. The extreme tameness of the Houdan, a valuable breed characteristic, seems to work more to their particular advantage than any other feature, for in addition to their being so easily confined and well adapted to large and small flocks they are hard to disturb, and in this way convert the wasted energy of the other non-setters into eggs and at the same time maintain flesh that rivals any fowl for quality and profit. These are not the only characteristics of economic concern, for they have an ideal shape for a layer and their chalk white eggs compare quite favorably in size to those of the Minorca, which as a class is credited with laying the largest egg. It is thought by some that the length of a hen's back is in proportion to the size of her eggs. The Minorca and Houdan appear to give this rule some grounds for support, and at all events it is evident that shape has much to do with the size, quality and number of eggs.

The Houdan is the only non-setting white egg-laying variety in the utility class and, like most of the others, she appears to have more lasting qualities for

appear to have winter laying as a breed characteristic, which from all reports seems to be a fact. Although a typical cold weather fowl they seem just as comfortable and profitable in sunny France, their native country, and by some it is thought that their crests also protect them against excessive heat in summer, which accounts for their being so productive at all times.

"I'M HUSKY."

They are not a little bit like Houdans at first, but are husky little, lemon and black fellows that grow like weeds.

Now consider the relative value of the Houdan as an exception to all varieties. The profit in poultry seems to favor the egg breeds and the production of eggs. The Leghorn, with her Mediterranean sisters and the Houdan, do not stop laying to set, and as their eggs are white-shelled they are in demand at all markets, and in many cases secure a premium, for they are uniform in color. Some do set, but I know of none that are less inclined to get broody than the Houdan or any that are capable of producing more eggs and at less cost, for like the other white egg layers Houdans are great foragers, energetic rustlers and light feeders. It is indeed disappointing to learn that our commercial egg breeds have their disadvantages. On account of their nervous disposition much of their energy is wasted, particularly on the range and in large houses by their running around and quarrelsome habits, which also makes them hard-meated and poor table fowl. They

eggs than the egg breeds. In fact, all things considered, I think a Houdan hen more profitable after her pullet year than any pullet in producing eggs. Size, small combs and heavy feathering appear to assist these hardy utility varieties towards a heavy winter egg yield, and in this respect Miss Houdan is extremely well favored, for her small "V" comb, often entirely covered by the attractive crest of a well-bred specimen, is a great protection. The head and face of a bird appear to be their most delicate parts, and the wattles, like combs, seem to act unfavorably, like a barometer for trouble, with sudden changes and cold weather. The odd muffs around their faces and pendant beards covering small wattles seem to do more than balance and set off the beautiful Houdan crests to advantage. On account of their heavy feathering, unusual vigor and strength, it is not to be wondered that such fowls as the Houdan, Brahma, Langshan, Red and Orpington

The Houdan rivals the meat breeds for profit and quality in meat. Like the other popular utility varieties their size is more commercial and suitable for one's table, the Standard weights being: Cock, 7½ pounds; cockerel, 6½ pounds; hen, 6½ pounds, and the pullets, 5½ pounds, which are just about right for one meal, and I know of no fowl that reaches a broiler size quicker and at such a low cost. They are quite deceiving in their weight, appearing rather small at first glance, but on taking into consideration their long, broad backs, deep keels and full round breasts, affording an abundance of fine-grained choice white meat, you can readily see why they are so heavy for their size. They also have very small bones, and the French people say dress with less waste than any fowl, which is a direct contrast to the large-boned, heavy meat breeds, and, of course, it is cheaper

HOUDAN HEN.

A Madison Square winner in 1913. Owned by Houdan Yards, Sewickley, Pa.

to grow flesh than bone and decidedly more palatable. The Frenchman may aptly be called the epicure of the world and his choice is the Houdan and crosses from it, and for this reason they are raised in such large quantities in France, one of the most progressive countries for poultry. Economic features are given more thought in Europe than in liberal

America, but as poultry keeping is getting on a better business basis here the low cost of growing and maintaining Houdans per head should command more attention. They mature and lay early like Leghorns, but do not become hard meat, and here we have in an old-established variety the advantages we are constantly striving for in the new breeds.

As to their beauty, this depends on the point of view, but at all events they certainly are distinctive and original on a large farm or country place, with their nodding crests, excellent shape, neat appearance and rich combination of color. There is just enough difficulty in producing a clear, glistening white mottle at the end of every fifth black feather and evenly distribute them over a beautiful green-sheened black plumage to arouse the intense interest of the fancier. Their white legs, slightly mottled with black,

are rather short and they have the distinction of possessing a fifth toe, which is detached from the others and curves gently upwards. The color of their legs and their white skin may be said to be a disadvantage in our market, which has not entirely overcome the prejudice for yellow legs and skin, but the same might be said of other choice fowl, such as quail, turkeys and guineas.

It is fortunate that the Standard is severe on shape, so in most cases the vigorous clean-cut show specimens are the best utility types. In fact here in America the model Houdan proves a much more attractive bird than the French Standard, particularly in size, shape and comb, without losing any of this old-fashioned French fowl's economical characteristics, which pronounce it such a valuable exception to all varieties.

## THE HOUDAN AS A UTILITY FOWL.

By Dr. G. G. Billman, Evansville, Ind.

THERE are a great many people, who believe the Houdan to be nothing more than a beautiful bunch of feathers and that the breed, as a breed, possesses no merit other than that. Now my dear reader, if this is your opinion, I want to inform that if you were ever mistaken in your life, you are mistaken in this.

The Houdan, is one of the oldest breeds of chickens, is strictly a French fowl and to those who are familiar and have watched the ups and down of this breed, will agree with me that they have certainly had their share of bad treatment.

I believe the Houdan to be one of the best utility chickens on earth and am going to try to show you why I say this.

The Houdan is a beautifully mottled bird, with the majority of its feathers black, bearing a lustrous green shine, with the tip of about one feather in

## Popularity of White Orpingtons

By Aldrich Poultry Farm, Columbus, Ohio.

IT has been freely prophesied by a great many breeders that the White Orpington demand would fall off and that they would not continue to enjoy the great demand in the future which has been theirs in the past. But we find exactly the opposite to be the case. Our business this year has increased by leaps and bounds, not only for high-grade exhibition specimens but for good utility stock, and the reason for this is very apparent. We lay it all to the great utilitarian value of this wonderful breed of birds. It is true that anything can be sold by judicious advertising, whether it be of much merit or not, but it always costs more to make the first sale than you realize from the expenditure.

Now, if the article has real merit the buying public will keep up its purchases, and on account of this real merit the White Orpington will continue its popularity. In the hands of the amateur as well as the expert, these birds have proved their merit. We have had many visitors on our farm during the coldest months of the winter, who have come out of curiosity to look over the birds. It is always our pleasure to take them with us on an egg-collecting tour, and when they see us gathering in large basketfuls of eggs it is no trouble at all to convince them that they really need a pen of these magnificent layers.

We sold six pullets to the principal of one of our public schools, who had never had any experience before with chickens, and he reports to us since early fall, when he purchased them, he has had an average of five eggs a day, which gave them all the eggs they wanted for their own use and that occasionally they had a dozen to sell to their neighbor, who had twenty or thirty chickens of other breeds and was not getting an egg.

Now, gentlemen, as long as we breed these birds so that they will maintain this high utility value, they are going to increase in popularity from year to year, and we confidently believe and predict that the time is not far distant when every farmyard throughout the country will have a flock of these birds and that they will gradually displace the mongrels now owned by so many farmers.

The man or woman that gets busy and raises some really high grade birds

that are true representatives of this breed is going to have a ready market for them for years to come, and at a remunerative figure. It is true that he is not going to be able to send out anything that has white legs at a big figure, on account of any past reputation he may have, but if he delivers the goods and gives each and every customer good value for their money, he will continue to enjoy the patronage of his old customers from year to year, as well as the new business that will naturally come his way.

Now, in proof of the foregoing statements we wish to state that our demand for eggs and stock during the month of February, and so far into March, has

First Rose Comb R. I. White cockerel, Chicago, 1911.

been far beyond our highest expectations, running over \$3,000 for February for eggs alone, and nearly half that amount so far into March. So you see that the buying public is still interested in securing high grade eggs, with the idea of improving their strains. Now, anyone who breeds these birds right, shows them right, advertises them thoroughly and, above all, gives his customers value received, will continue from year to year to increase his business. What one farm has done you can do if you get started right and keep everlastingly at it.

First Rose Comb R. I. White hen, Chicago, 1911 and 1912.

five a positive white. For a city backyard fowl, this color is in their favor.

As for size they are neither too small or too large, being the happy medium between the large and the small breeds. The Standard weight being, cocks seven and one-half lbs.; hens, six and one-half lbs.; cockerels, six and one-half lbs.; pullets, five and one-half lbs. Thus you see there can be no fault to find as to size.

Quality of their meat.—It is of the richest and most delicious of meats. It is quite common that every breeder of every variety of fowls, say the same thing about their respective breeds, but here is what the French people say (and they are the highest livers on the globe and should be competent to judge). "Give us the Houdan, they are the finest table fowl we know." (Get one and judge for yourself). The color of their meat before cooking resembles very much that of frog meat.

For hardiness, they certainly cannot be excelled. As proof of this, I want to state that one of my farmers, whose name is Walter Vann, Outer Lincoln Ave., Evansville, Indiana, (write him if you wish), has been raising Houdans for me (as I have all my birds raised on the farm), said, "They are the greatest foragers I ever saw." Being

great foragers and constantly up and doing, I believe is sufficient proof that they are one of the most hardy chickens.

Another reason why the Houdan makes one of the best backyard fowls: They are easily confined, can be kept inside a four-foot fence and stand confinement most excellent.

Again, the Houdan is an absolute non-sitter, the backyard poultryman is not compelled to be constantly annoyed with having a broody hen and a broody hen does not produce eggs, usually the very thing the backyard poultryman is feeding them for.

As to egg production, I believe there is no best breed, but that many of the leading varieties that have been bred for egg production, will produce about alike, under like conditions. But as a cold weather layer, it never gets too cold for the Houdan, as she has a very small comb to begin with and that is protected by her beautiful crest, which Miss Houdan so gracefully carries. Their wattles, although very small are entirely hidden by the beard. So the Houdan has no head gearing to become frosted and being a very heavily feathered bird, she seems most willing to shell out the eggs during the zero weather. As to the size of the egg, the Houdan lays the largest of any breed of chicken, save that of the Minorca.

Color of the Egg.—Now here is the pole that knocks the red apple. Boy, if you are thinking of engaging in the chicken business, don't fail to get a breed that lays white eggs. The producers of brown eggs are getting scared, you see it on every hand and many are the articles that are being written and headed, "Why are the Brown Eggs Better Than the White?" "Let us Boost Brown Eggs." The brown eggs this, and the brown eggs

that. Why, I even saw an article a few days ago where a certain brown eggs man was appealing to his fellowmen and amongst his other sayings was this: "Boys, something must be done to save the brown egg." Why all this commo-

"International" first prize S. C. R. I. Red cockerel, Buffalo, 1913. H. W. Alt. 87 Fuller St., Buffalo, N. Y.

tion about the color of an egg? The fact of the matter is this, that white eggs is played in great favor in many of the markets. Many and many are the housewives who will have nothing but the white egg.

The growth of the young chick must also be taken into consideration. I believe there are few of any breeds of

chickens that will produce chicks weighing a pound to a pound and one-half, any quicker than will the Houdan.

If you don't believe this, get you seven Houdan eggs and eight of any other breed you think will out grow them and set the fifteen eggs under the same hen, allow her to hatch and brood them and see which will produce a pound fry first. You will then be convinced that my statement is true.

My dear reader, there are many other things I could tell you about the Houdan but do not think it proper to take the space at this time, but in the event you are thinking of launching into the chicken business be sure and investigate the Houdan.

#### SICILIAN BUTTERCUPS.

HAVING been a reader of your paper for several years, and being intensely interested in poultry all my life, and the last four years especially in the comparatively new breed of Sicilian Buttercups, I feel as a member of the American Buttercup Club, that this worthy, profitable, and beautiful breed does not get its just mention from the different poultry papers and from the breeders of this valuable fowl.

If more prominent breeders of other varieties would but test the sterling qualities of the Sicilian Buttercup, both from the fancy and utility standpoint, it would be but a short time when they would be raised as extensively as any of the older breeds now in existence. Different varieties of the Mediterranean class are styled as non-setters, while this is true to a certain extent, there is but one breed in existence today to my knowledge that is absolutely a non-setter, and that is the Buttercup.

As before stated, I have bred them four years, and in that time have never

Breeders like these produce "baby chicks of quality" for R. C. Caldwell, Lyndon, Ross Co., Ohio.

known one to be the least bit broody. While this is a great advantage in their favor, they possess many more just as important. They are very gentle and docile, in fact full as much so as either the Plymouth Rock or Wyandotte, and do perfectly well when confined to small runs.

In size they are a little larger than the Leghorn and make excellent broilers, as they have more meat when dressed for market than any other breed their size, with a breast as plump as a partridge. As to their laying qualities, no breed can outlay them as they lay practically all the time even through

and breast and fluff a lemon color, which makes them very pleasing to the eye. To fully admire and appreciate them one would have to see them, and once seeing them you could tell them as far as you could see by the carriage and shape of the comb. Our club secretary, since the organization of the American Buttercup Club this year, has received over 1,200 inquiries for stock and hardly any for sale up to the present time.

I am not as large a breeder of this breed as I would like to be as I have not the room, but what I have are the best, as I am a believer in quality

PARSON'S POULTRY PLANT  
AVON LAKE, OHIO

White Orpington Cockerel, a Toledo and Cleveland winner. Bred and owned by Parsons' Poultry Plant, Avon Lake, Ohio.

molt, and are especially good winter layers.

They are more profitable than other varieties, for the reason that it takes no more feed to keep 20 Buttercups in good laying condition than it does 12 Leghorns. They lay a chalk white egg of large size, somewhat larger than the Leghorn. The most beautiful and distinct feature they possess is the formation of the comb, from which they derive their name. Starting as a single comb at the bill, it forms in a cup shape on the top of the head with points entirely surrounding it, similar to a buttercup flower, hence their name. In color the male is red or a butterish red, somewhat like a Rhode Island Red, and the female a golden buff on the hackle, lighter shade buff on the back, spangled with black

more than quantity. To prove this, will say that at the Grand Central Palace Show, New York, this season 1912, I won first on cockerel, first on hen, second on cock and fourth on pullet in good competition. I am not writing this to make people believe that I have a lot of stock for sale, for I have none to sell and only a limited number of eggs to sell for hatching. But my reason for writing this article is solely to get more people interested in this grand breed and test for themselves their many excellent qualities. I hope other breeders will write and tell their experiences and opinions and let the public know what splendid qualities the Sicilian Buttercup possesses.

JOHN H. NOSTRAND.

Farmingdale, New York.

## THE BACK TO THE FARM MOVEMENT.

By Wm. P. Gerst, Alton, Iowa.

The "back to the farm movement" is a much talked of question of today. Looking at it from one point of view the discussion is all right, still, on the other hand, it is quite absurd, for I believe, as one of our contemporaries whose name I cannot at present recall, said recently, that the cry should be, "Remain on the farm, young man," instead of "Back to the farm, young man." Why this statement? Many a young man leaves the farm to work in the city, for he is told there the hours are shorter, better wages are paid, pleasures are greater, and so on. So, with a nice wad of money earned by diligent work on the farm he soon is on his way to the city. He soon gets a job, get acquainted with a number of young men, and after the day's

Typical White Indian Runner Duck as bred by Mrs. U. R. Fishel, Hope, Ind.

work is over with they find a thousand and one different ways of spending their hard-earned money. The bank account he took with him from the country diminishes, and he soon finds himself entirely dependent upon his monthly wages and not able to lay up a penny for a rainy day. When on the farm he was told that he could earn from \$45 to \$60 a month in the city. This, with the assurance of shorter hours, looked better to him than \$35 on the farm and longer hours. Little did he think that in the city \$60 a month does not include board, room and washing, so he finds himself running short. He is not able to lay aside a certain amount as he did on the farm. He gets accustomed to the pleasures of city life, and ten chances to one he will never feel disposed to go back to the farm again.

Therefore, let us strive to make our farm life attractive for our young generation. The young man should be given a chance as soon as he has finished his high school course. Give him a few hogs or cows of his own. Let him pocket the money of his produce. It frequently happens that the boy is presented with a pig or calf, and when ready for market his illustrious sire will sell the boy's pig or calf and place

the cash to the credit of his own bank account. The boy cannot help but feel disappointed and be inclined to get disgusted with farm life, and go to the city as soon as the opportunity offers itself. Can we blame him? No, indeed not. Let us look up the history of most all the large breeding establishments in this country, and what do we find? The young man, having completed his college career, goes back home onto the farm where he is taken in as a member of the firm. He at once feels a responsibility resting upon

his shoulders. He gets busy with a determination to do all for his firm he can, and he succeeds in life. Upon the death of the father, the sons are able to proceed with the management of the farm and herds. The father gives them his experience and this, combined with the things learned at school, make them well fit to manage the business left them by their father. Sometimes the farms are divided, each child receiving its allotted share, but the young people remain on the farm. Does this sound different than the saying "Back

to the Farm?" It certainly does. Fathers, do not be too conservative with your children. Having arrived at the proper age, give them a chance. It will certainly be appreciated by them. It will stop the great movement of young people from the farms to the cities. By dividing the farms and every individual working a smaller place, intensive farming will be practiced, in consequence of which the yield per acre will be increased, and we will soon be better able to feed our fast increasing population.

A FLOCK OF LAYING HENS ON THE NORTHERN PACIFIC POULTRY FARM

### NORTHERN PACIFIC POULTRY FARMS.

The farms are located at Kent, Washington, 15 miles south of Seattle, in King County, along the route of the Great Big Baked Potato. The farm is known as the N. P. Dairy and Poultry Farm, under the management of Mr. Phillip F. Ponssen. Mr. Ponssen and his family reside on the farm in a modern two story residence of 14 rooms. The house is sanitary in every respect, has running water (hot and cold), electric lights, bell service, steam heat, etc. The house is situated on a beautiful green lawn 300 ft. square. The lawn is kept beautiful, and roses as well as other seasonable flowers blossom the year round. The entire farm covers a tract of 60 acres of land, with an additional farm of 120 acres rented for the purpose of raising young stock.

Directly back of the residence is located a laying house 450 feet by 16 feet which accommodates 1,500 laying

fowl. Connected to this is a park 450 feet by 150 feet—in orchard. Then following this building is another two-story building 40 feet by 60 feet, the lower portion of which is used for packing, storage, etc., while the upper floor is used for storing the chicken feed, etc.

There are four laying houses 20 feet by 80 feet on a five acre field, accommodating 3,500 laying fowl. We have numerous colony houses used for the purpose of maturing pullets. On the south side of the house there are four brooder houses, 20 feet by 60 feet, each with parks; also one concrete incubator cellar, 20 feet by 60 feet.

From the poultry end of it the egg production varies according to season, but the general average is 150 dozen eggs per day; 10 dozen broilers per day, and four dozen fowl.

Method of feeding. The fowls are fed on the hopper plan, each division contains a hopper capacity of 400 pounds of cereal, consisting of bran,

shorts, middlings, oat middlings, corn meal, alfalfa meal, beef scraps, oyster shells and charcoal. However, the broilers and fowl are fed exclusively on milk, and the watering of the fowls is automatic, giving a constant flow of fresh spring water through the various parks and houses at all times.

The eggs are collected twice daily, and a perfect record kept of each house, and then taken to the packing house, where they are candled to insure perfection. Having been candled they are then stamped and packed in single dozen cartons, then placed in 30 dozen capacity cases and expressed to the commissaries.

The broilers and fowl are kept in special fattening pens where nothing but milk and corn meal is fed them. They are slaughtered and dressed on the farm in a specially provided cemented and thoroughly sanitary slaughter-house, and from there are taken and packed in boxes containing one dozen of each, and then taken to re-

SOME OF THE BUILDINGS ON THE NORTHERN PACIFIC POULTRY.

frigerating rooms, where an even temperature of 30 degrees is maintained. After remaining in the cooler for 24 hours they are then shipped to the commissaries.

The incubating capacity is 5,500. In the brooder houses up to this last season individual brooders have been used, but a change will be made to the oil-burning stoves, each stove taking care of 1,000 chicks. Through this system a larger amount of chicks can be handled with less labor and less danger.

The farm specializes on White Leghorns exclusively, finding that the White Leghorns are not only recognized as the best egg-producers, but a White Leghorn 1½-pound broiler is the first word in a perfect table fowl. All poultry and eggs used in the hotels and dining cars of this company are secured from this farm. Tourists to the Pacific Coast should not fail to visit this farm. —J. Brinkama.

### BELGIAN CAMPINES.

As a breeder of Belgian Campines, the greatest egg machine in the universe, I hereby make a strong protest against the numerous misstatements concerning them made by breeders of the so-called "Improved Campines." The breeders referred to when they started to boost their birds could not say anything too good about the Belgian Campine when using that bird's reputation to boost their own cross-bred fowl, thereby deceiving the public into believing that the laying reputation of the Belgian bird applied to the laying reputation of the "Improved Campine," whereas in reality the laying reputation of the Belgian bird no more applies to the laying reputation of the "Improved Campine" than the table qualities of the pure Barred Rock applies to the table qualities of the Hamburg-Rock-Leghorn cross. When these breeders thus established a false reputation for their birds at the expense of the Belgian Campine, they then began making false statements about the Belgian bird (it having served their purpose), with the object in view of trying to discredit it with the public, for fear its merits would become commonly known and thus deal a death blow to their own four-flush breed. They need not have gone to the trouble of trying to discredit the Belgian Campine, however, because the "Improved Campine" will do that. The "gullible public," so often referred to by these boosters, will become so disgusted with even the name of Campine after it gets a good dose of "Improved" birds that it will be long in recovering from its effects and be suspicious of the Belgian bird notwithstanding its established reputation.

When "Improved Campines" were first exhibited in this country, their breeders advertised through circulars, pamphlets and the poultry press, and went on to state that their birds were a cross between the little Belgian Campine (a white neck, white and black

barred body bird weighing less than three pounds, and bred on the La Campine district of Belgium) and the big Brackel (a white neck, white back and barred body bird, weighing about five pounds, raised on the more fertile sections of Belgium), and that the blending of these birds together, without any other cross, produced the "Improved Campine." They then went on to further state that the climate of Belgium is extremely cold and severe in winter and extremely hot in summer, and for that reason their birds would do well in any climate. They cited the wonderful laying reputation of the Belgian bird as applying to their own breed.

The statement concerning the make-up of the "Improved Campine" has no

tain very little Campine blood; so little, in fact, that in breeding for weight and color their originators used blood foreign to the Campine-Brackel (the same bird), thereby sacrificing the laying qualities and energy of the cross produced. The listlessness of these birds in strong contrast to the unequaled activity of the Belgian bird in itself should convince anyone that there is no relationship between them. In some cases, however, these boosters have crossed the pure Belgian bird with the "Improved Campine" and got a fairly good, active bird and layer from the cross.

"Improved Campines" are existing solely on the reputation of the Belgian Campine. They have no reputation of

One of the Long Laying Houses on the Northern Pacific Poultry Farm.

foundation whatsoever, for the reason that there is not a particle of difference between the Campine and the Brackel, including type, size, color and weight. The only difference, if it may be called one, is in the name. In some parts of Europe, including Belgium, these birds are known as Campinose (French for Campine), and in other parts of Europe, including France, they are known as Brackel. Some foreign breeders advertise them as both Campine and Brackel, simply because they are known under both names and not because there is a distinction between them in any other particular. These native Belgian birds average about 2 pounds 10 ounces in weight.

From the above the most simple-minded person can easily see that these so-called "Improved Campines," whose weight averages around 4½ pounds, con-

their own, and have never demonstrated in public that they are even a fair layer. On the contrary, I know of instances where these four-flush birds have been tested with a view to using them on commercial egg farms if they proved to have any merit, and have been found to not compare with other breeds kept on the farms referred to as far as their laying qualities are concerned. I have a letter before me now which I recently received from a commercial egg farm at Silver Springs, Md., where thousands of layers are kept, stating that the proprietor had spent big money in buying "Improved Campines" from several breeders prominent in poultry circles, only to find the birds a failure. To use his own words, he says, "They are very listless and worthless as layers."

I also wish to emphatically state that

**R. C. CALDWELL** Ships Baby Chicks of Quality on short notice. See ad on page 653

**EGG PRODUCERS**—If you want eggs buy Fishel's White Ply. Rocks

**DE VOSS' COLUMBIAN PLYMOUTH ROCKS**

Winners Memphis, Tenn.; Boston, Mass.; Pittsburg and Cleveland. Eggs from best exhibition matings, \$5.00 per 15. Utility matings, \$3.00 per 15. Express charges prepaid to any express office in the United States. Circular free. Lee W. De Voss, Box 1293, Greenfield, Ohio

the Belgian bird does not lay a small egg, as these boosters would make you believe. On the contrary, there is no breed which lays a larger egg. I have many birds on my farm laying eggs weighing over 2½ ounces and stand ready to back up this statement. In this connection, however, I want to say that when I refer to Belgian birds I mean the native Belgian Campine, such fowls averaging about 2 pounds and 10 ounces each in weight, and not to the so-called "Belgian Campine bred to the English Standard," and which weighs 4½ to 5 pounds, and which is really no more Campine than the "Improved Campine."

In closing, it will not be amiss to state, in connection with the judging of Campines, that the recent criticisms made against judges for giving preference to Belgian Campines over the "Improved" variety in awarding prizes at shows is unjust and officious. These judges would have acted properly if they had disqualified every so-called "Improved Campine" on exhibition, because such birds are no Campines at all and are not entitled to entry as such. The judges made their awards according to their ideas of merit, and deserve credit and not censure for not allowing individuals or any organized body of individuals to influence their decisions because such persons happen to breed "Improved Campines" and would like to make obsolete, if they could, the original, legitimate and only breed of Campines—the Belgian bird.

These persons should understand that the general public does not take kindly to their bulldozing tactics against poultry judges; nor do they take seriously their assumption of authority, guardianship or dictatorship over the destiny of the Campine.

The Belgian Campine stands on its own reputation as a layer and not on the reputation of some other breed like its illegitimate namesake does; and the

time is not far distant when the little Belgian bird will take the place of other breeds on the big egg plants of the country on its own merits alone, while the "Disproved" "Improved Campine" will be, together with its boosters, in the category with Dr. Cook of North Pole "fame." Yours for a square deal, Brookland, D. C. C. D. Holden.

#### CARE OF LITTLE CHICKS.

THE time is here when all of us are thinking about our chickens and so anxious to get busy, or rather have biddy get broody, that is my greatest worry and I find most people that want early chickens have the same trouble and have to turn to the incubators for help. I know I do. I'll not say anything about artificial incubation in this article.

I raise all of my chicks without the hen and prefer the fireless brooders if climate is not too severe. Even when hatched by a hen I raise them without the hen. When chicks are first hatched and entirely dry I put them in a warm lined basket or box, cover them snug and let them rest and sleep for 72 hours, as they require no food during that length of time. The first feed I give them is hard boiled eggs. I use the infertile eggs I have tested out ten days previous to the hatch. Crumble the boiled eggs very fine. Mix with corn meal and powder black pepper and give to them. I warm the drinking water, just taking the chill off, and add 4 grains of sulpho carbonate of zinc to the quart and give them. The zinc cleanses the intestines and is a fine preventive of diarrhoea. I have used it for quite a while and lots of my friends have, and have been free from the diarrhoea. Be sure not to let the little fellows get wet. I use a saucer or sauce dish and set a glass or cup in the middle of it. I remember my first hatch. I put them all in

a low box and put feed and a jelly tin of water. Set them in front of the grate and went on with my housework. When next I went to see about them about 12 or 15 were as wet as water could make them and nearly all of them died.

The second feed I add corn meal to their bill of fare and the third on fourth day I give the wheat bran and chick feed. I get the cheap cracked rice from the grocery store, boil it good and done, sprinkle with common or nut meal and feed that to them about once a week. Irish potatoes, boiled or mashed, are good for them, also raw onion. Lettuce leaves are fine, too, if you can get them. The chick feed is always fed in a litter or short straw cut fine and the exercise they get scratching for the tiny grains is good for them. I keep the bran before them all the time and place the zinc in the water until they are 10 or 12 weeks old. Their quarters must be kept very clean and don't put too many in one brooder or coop, for they crowd and the weaker or smaller ones are trampled down or pushed around and smothered. It requires so little heat for them and as they grow the heat should be decreased, for there is lots of warmth in their little bodies. I learned that from experience by losing so many, and the greatest temptation, I think, is to try to have a great number and so many of us have more than we can take care of right. There are so many little things to see to all the time they can not be neglected at all. I have had bowel trouble, from too much heat, too little heat and from suddenly changing from one kind of feed to another. There are so many evils to watch one has to be on the alert all the time. I stick to the above until they begin to eat wheat, and with wheat they find their crops are usually pretty full by night and they do grow so fast.

## EGG PRODUCERS—If you want eggs buy Fishel's White Ply. Rocks

# Oculum

## = A SELLER =

Say the I. W. Scott Co., a leading jobber of Pittsburg, Penn. After handling OCULUM for over one year, they bought fifty gross (\$2,400.00 order), and are getting many repeat orders, and have not been called upon to refund for a single bottle.

"OCULUM" decreases "Setting" half; increases eggs; cures sick fowls (whether you believe it or not), increases fertility. Cholera, White Diarrhoea, Roup, Canker, Sore-head and Black-head no longer feared by OCULUM users.

At your dealers, or if skeptical, make us prove it by ordering a dollar bottle direct from us on thirty days' trial.

## THE ALDRICH POULTRY FARM.

Just beyond the city of Columbus, and within sight of the dome of Ohio's state capital, lays "Maplehurst," the Aldrich home, and the seat of the Aldrich poultry farm. We had traveled many miles to visit this farm, it was our ambition to see it for its admirable location, its beauty, and the records of the Aldrich White Orpingtons, brought it fame, and wherever we went, we were asked if we had been there, and for our opinion of their birds. Withal our interest grew, and at our first opportunity we made it a point to call, and now after seeing it all and meeting the Messrs. Aldrich at their own home, we can well say that we are very glad we went, for we found much to interest us in both men and birds.

As we entered the dooryard and walked under the giant maples up to the home, we tried to imagine just what this place would look like in June, when nature is at its best. No season can dim its beauty, but in summer, when the trees are in leaf and the shrubs in bloom, with the 400 feet of lawn in front of the house, one can imagine it a haven, where any nature could find contentment.

Meeting Mr. W. R. Aldrich, we were ushered into the office quickly to be joined by Mr. O. W. Aldrich, and by Mr. L. Rawnsley, the superintendent. Chicken was the general subject, and we have got our first insight and formed our first opinions of what was before us to see, and what any man can expect in dealing with these people. Unhesitatingly we recommend them. Their every care and desire is to well please every customer, and, dear readers, they have the quality to do it with. No man can deal with this farm without getting satisfaction and full value every time.

In charge of Superintendent Rawnsley we left to make the rounds of breeding pens and our way first led down to the double colony houses. Each side opens into a large grass covered park. They are of the open front order and each has two pens about 12x16. These are ideal buildings, with the chicks busy and happy and in every coop we entered we saw eggs in the nests.

It would take pages to describe the birds as we have seen them here, so we will content ourselves by writing from our notes and giving special mention to features as seen and noted.

Heading pen one was "Snow King," in truth and in fact a marvel in pure, sound white plumage, a bird of the best type and style, well carried and stands strong. First prize winner at Chicago, December, 1911, in a class of 42 cockerels, mated to six hens, all true Orpingtons, good in front and back, great size and the best of condition.

In pen two we found just our ideal in the male and females and think this one of the grandest pens of birds we have ever seen. In mating and all-round high quality it is a beauty. Headed by "White King," first cock, Chicago, December, 1912. He stands clean, with legs well set. He also won cup for champion male in class of 85. Well he deserves all he got and more. His kind are as scarce as the 1804 dollar, and there are only three of them known.

Madison Square Garden, New York, flavor is found in pen four, headed by "White Champion," the cockerel in their first prize New York pen, Dec., 1912. He also won first at Allentown and the futurity special, and at Atlanta won first and sweepstake special for best cockerel in the show. With these records he requires no special comment from us. He has eight selected mates, each a gem in color and of the best possible form.

The male in pen five is their first Cleveland and Baltimore cockerel, 1912. Positively snow white, comb well set, strong red eyes, a beauty bird, grandly mated and one of the very best. Six of the eight females here match up perfectly in size and shape; the other two are very choice and with a mite longer backs.

In pen six is another New York winning male, and while a very large bird he has the true Orpington type, well carried. Very handsome females here, also of grand size. Pen seven, another winner at Chicago, Pittsburg and Baltimore, mated to classy hens, half of which are winners of note and the balance from winning lines.

Heading pen eight is as white a bird as we have ever seen and a royal good male. He stands and carries fine, great head, one of the kind of birds bound to attract. He also has won his honors and as mated here promises much for the future. In pen nine the male is an English winner, besides winning at M. S. Gardens, New York. While we admired this male for his grand all around quality, we still believe that in this

## A Wonderful Female Line

Have been working for years to improve the color in females, and now have a line that will produce a large percentage of very dark even red pullets that hold a good red even color as hens. My birds won at Philadelphia, New York, Altoona, Pittsburg and Buffalo. I bred every female shown in five years. Mating list free.

Every bird shown, as well as every bird in our breeding pens, has been raised by us on our farm and banded with our seamless leg band. Chicks, \$1.50 and 30c each. Eggs, \$10, \$5 and \$3 per 15. Breeding and show birds for sale. Cockerels and pullets, \$2 and up. **Write for mating list.**

Chas. Staaff, Manager

Florham Park, N. J.

pen are some of the Aldrich best females. They are screamers in color and form and all with the best of eyes.

"Champion Madison" heads pen ten, and as his name implies, he has twice been a New York winner, a record seldom attained in any variety. His breeding record also is a feature. Well he looks it, for he has all the style with rarest quality, a beautiful bodied bird. Mates are select, all with records, and include the famous hen "Lady of the Snows." If eggs were ever worth more than fifty cents per dozen, and chicken over 20 cents per pound, then this pen and their eggs are beyond price, even if they but produce 80 per cent of their own quality. But as mated we would bank on 125 per cent at least.

Both pens eleven and twelve are similar to others described, with males and females winners (nearly all females). Their line of mating is same as followed in the others and from both results showing quality will be had.

Pen A—By this time our note book resembled a time table with the winnings and shows recorded. Regarding this pen our book says: Excellent quality mating, even, grand eyes and heads; male one of the very best. We did not know at the time that we had got into the \$10 pens and according to our idea we found much to be satisfied with here, as the notes show. There probably is cause in selling these eggs for five dollars less, but we want to be shown. This, like several others that followed, were just as finely mated and with birds of character and strong in vigor, shape and color.

In this line of pens up to pen I the males are all birds with a winning record, and so are most of the females. From one to the other we went, handling many and seeing all, and we were more than gratified with all. We will say right here that we did not think it possible for any one farm to have so many bang-up quality White Orpingtons. There is but one solution, and that is: The White Orpingtons in the hands of such breeders as the Messrs. Aldrich, are breeding true to color and type, and in combs and eyes as well. From a coarse, raw-boned and clumsy fowl they have with in a very few years been improved in all qualities and are today the picture of symmetrical idealization. Straw color and brass are also a thing of the past and forgotten. Why, here I saw upwards of 2,000 White Orpingtons, every one white without a particle of foreign color. The Orpingtons have come to their own. They merit all the breeders can or will claim for them.

In the long house were the five dollar matings, and here it was the same story over, with a winning male and carefully selected females in each. Each pen had from eight to ten females that were very even in type and of extra color with exceptionally fine combs, eyes, etc.

We were just delighted with all seen here in stock, buildings and arrangements and would wish that all interested readers could see this plant as we did. The roomy pens, everything clean and the busy fowls, it all made a picture that appeals to the heart of the poultryman and makes the desire stronger than ever to have and to breed and raise "Better Poultry."

We wound up in the conditioning and sales room and here Mr. Aldrich again joined us. All around this room were a double run of coops with selected birds sold and being prepared for shipment. After looking 'em all over we selected two that greatly pleased us—cockerels with excellent fronts and backs and fine heads. We asked Mr. Aldrich what he had sold these birds for, and when told the price of one was \$25 and the other \$40 we could then see and fully understand the foundation of their popularity among the breeders and the reason for their great business. Those birds were hummers, and if he had told me twice that price I would be willing to prove them well worth it.

Returning to the office we received one of their catalogues and read it through on our way to Pittsburg. It is a handsome book, covering every branch of the business, and in which they tell in their own way of their stock, winnings, etc., and should be read by all lovers of Orpingtons, for it tells their story of growth and success written by the hands that made this farm possible.

As we stood near the office entrance and had a general view of the plant, we were again impressed with its grandeur and size. To the right were the rows of double colony houses, to the left the long laying house, brood coops, etc., straight ahead the orchard with its shady range and hundreds of houses for the growing birds. Yes, indeed, this, in fact, is a "chicken Eden."

To review the stock seen here in a general way hardly seems necessary. Suffice to say it is a wonderful collection

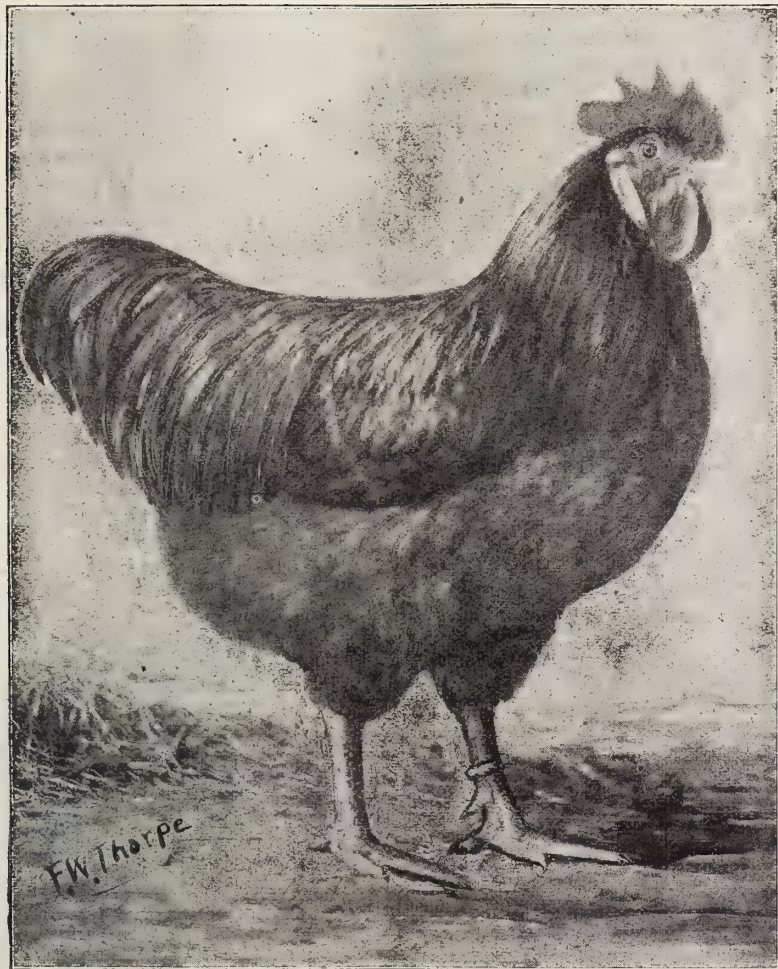

of winners at our greatest shows, and we don't believe it possible to gather another like it, for the records show that in 1911-12 they exhibited at Madison Square Garden, New York, Chicago, St. Louis, Allentown, Indianapolis, Augusta, Baltimore, Pittsburgh, Cleveland, Atlanta, Syracuse (New York State Fair), London, Ont., and Detroit, Mich., and at these leading shows they won as follows:

	1911	1912
Firsts .....	17	31
Seconds .....	18	19
Thirds .....	6	21
Fourths .....	10	13
Fifths .....	6	9
Sixth .....	1	..

Here is the record made in two seasons by the Aldrich White Orpingtons, a total of 151 prizes, regular awards, and

The wonderful achievements in poultry raising in the United States in the past ten years is something to be proud of, for already our yearly egg yield in dollars and cents exceeds the wheat yield and the quality of the stock is improving on about the same ratio as its market price, but the industry is still in its infancy and the young man starting a career would do well to consider its wonderful possibilities at present unknown to but a few. For a great field is here opened to the thoughtful and conservative investor of small means, insuring an easy way to gain a comfortable competence. The first and most essential thing for the novice to learn after selecting his birds is that he must have the best and most sanitary equipment for their care. Chickens, like humans, cannot thrive in unsanitary surroundings or on improper food

Second S. C. R. I. Red cock Chicago, Dec., 1912. Property of W. Etzensperger, Wiloughby, Ohio.

innumerable specials, silver cups, medals, etc., including both the male and female "Futurity" win at Allentown. Such winnings are indisputable testimony of quality.

We have before spoken of color, and we again say this entire line is one of exceptional pure white color. Eyes also are a feature. We did not see a green or pearl eye on the place. Most all had the strongest kind of flaming red eyes. Combs in both males and females were rather small and low and well set, with even serrations. In general shape of the birds, we found what to our mind was their greatest feature. Nice white legs, clean, with good bone and proper length, were noticeable on all.

Here we saw far more than we expected in numbers and quality as well. It is a feature line worth going many miles to see, and we felt well repaid, and to those who had preceded us and told us of its value we can only say that half was barely told by them. We now feel the same way. We feel that our efforts fall short and fail to properly tell or do full justice to this plant. Well, we have done our best and if we have created just a little renewed interest in this line and in these men we will then feel that we have accomplished something for the good of "Better Poultry." H. P. Schwab.

and impure water. They must be properly housed and carefully protected from their natural enemies and plenty of pure fresh water is an essential that must not be overlooked. This latter item is made quite simple by equipping the poultry yard with the drinking fountain that affords a continuous supply of pure water of just the right temperature, called "The Moe's top-fill Sanitary Fountain," which is manufactured in many sizes of the best grade of galvanized iron, by Otis & Moe, Otis Bldg., Chicago, U. S. A.

C. E. Riley, 431 Fargo St., Buffalo, N. Y., breeder of Rose Comb Rhode Island Reds has this to say about his cock bird Red Jacket, if "like begets like" my cock bird, Red Jacket who won first cockerel, last year and first cock this year at Buffalo. He is the sire of first Buffalo pullet that defeated the first New York Palace Show pullet, third Buffalo cockerel, and all the females in the second and third Buffalo pen, these being selected from 50 chicks. This male bird is darker than some wish for exhibition males, but is an excellent breeder and breeds some remarkably fine chicks. The show record made by Mr. Riley is an enviable one and full information about the price of stock, etc., will be furnished on application. Write him and mention American Poultry Journal.

## KODAK on the Farm

There's a practical, common sense use for the Kodak on every well regulated farm. It's rapidly becoming a necessity to the business farmer. Pictures of stock and poultry to be sent to prospective customers, pictures of crops at certain stages of their growth as a matter of valuable record, pictures of fat or lean cattle and hogs and horses as a record of certain methods of feeding, pictures of buildings that are to be re-modeled, pictures of desirable features in other peoples buildings—you can use all these to advantage in *your* business.

And you can make good pictures with a Kodak, or with a Brownie and can successfully do the developing and printing. No dark-room, no fragile glass plates. Nothing complicated.

Ask your dealer to show you the goods and give you a catalogue, or write us and we will mail catalogue without charge and give you the address of your nearest Kodak dealer.

**EASTMAN KODAK CO.,**  
418 State St., ROCHESTER, N. Y.

DANIEL P. RITCHEY;

## BUFF ORPINGTONS, BLACK MINORCAS

Now as the hatching season is beginning and you surely want to buy the best stock that you can get for the money, we will quote you a few of our winnings in four state fairs in competition with the large Eastern breeders.

**In the S. C. Buff Orpington Class**—At the Nashville State Fair we won: 1st hen; 2nd cock; 2nd pullet; 3rd and 4th cockerel; 3rd and 5th pen; 5th cock. Also a special premium on the hen for being the best in the fair. At the Alabama State Fair we won: 1st cockerel; 2nd cock; 2nd hen and 2nd pullet. At the Mississippi State Fair, one of the largest ever held in Jackson: 1st cock; 1st hen; 1st and 3rd cockerel. At the Louisiana State Fair we won: 2nd cock; 3rd hen; 3rd cockerel.

We have the nicest lot of S. C. Black Orpingtons which were not exhibited, this year.

**In the S. C. Black Minorca Class**—At the Alabama State Fair we won: 1st, 2nd and 4th cockerel; 1st, 2nd, 3rd, 4th and 5th pullet; 1st and 2nd cock; 2nd, 3rd and 4th hen; 1st and 2nd pen. Also a premium for best display of Asiatics. At the Mississippi State Fair we won: 1st, 2nd and 3rd cockerel; 2nd and 4th pullet; 2nd hen; 3rd cock, and 1st pen. Louisiana State Fair: 1st and 2nd cock; 1st, 2nd and 3rd cockerel; 1st, 2nd, 4th and 5th pullet; 2nd hen; 1st and 2nd pens.

This should be evidence that we have stock or eggs that you are looking for. We have the largest and best equipped poultry farm in the South. You do not have to go East for eggs for hatching season, taking chances on the climate where you can get them just as good for possibly less money. All our stock are free range. They are up to the standard in weight, type and color. Correspondence solicited. Day old chicks only when ordered.

## MAPLESIDE, WHITE WYANDOTTES

Chas. Nixon, Washington, N. J.

We have often thought that the White Wyandottes were a "lucky" breed and variety, for as their champions they have had a select number of breeders who have spared nothing to make them popular and to bring out and demonstrate their merits, men who stand high as breeders and well in the community in which they live.

Chas. Nixon has won his way. First as a breeder he came into prominence years and years ago. Then later as a poultry judge and today he is favorably known in every nook where the sun shines. The credit is all his own. He alone has made his success possible. His "Mapleside Strain" is one of value. Bred with skill and mated with greatest care for years, they have a breeding value besides their individual worth that is safe to bank on.

As an exhibitor he has been handicapped by being called to judge at leading shows, but we well remember his winnings at Philadelphia, New York, Boston, etc. This season he exhibited at the National Club Show held at Albany, N. Y., where in a class of over 300 birds he won first pen young, third pen old, thirty-six pens competing, first and sixth hens, special for best shaped female, special for best solid colored hen in show, and four other special prizes. This is a record of value when we consider the number of birds competing and the yards represented.

We have just received Mr. Nixon's catalogue, a very neat book, full of sound information and showing some of his winners, with testimonials, etc. It is free for the asking. Write him today.

Mr. Nixon has for sale a choice line of birds, bred from his best, and is making a specialty of properly mated trios and pens. Birds mated by an expert are reliable values.

## H. D. RILEY, BARBED PLYMOUTH ROCKS.

Our annual round would be very incomplete without a visit to the home and yards of Mr. Henry D. Riley, Strafford, Pa. Mr. Riley has in the past fifteen years of breeding demonstrated his skill and brought his line to the very front and a leader in popular favor. He has accomplished this by study and practical breeding and by honest dealing with one and all.

He has made the rounds of the prominent shows and with them a record all to his credit as a breeder and exhibitor. From the Great Madison Square Garden, New York, Show, where his birds have won highest honors for years, to Baltimore, Cleveland, Philadelphia, Camden, Williamsport, etc., he has won his way and secured the stamp of honor for his line, which they so very richly deserve.

Mr. Riley's plant covers about thirty acres of land. The houses are all well built and roomy and the parks are extra large and planted to fruit. The young stock has unlimited range to roam over land that lays low and moist enough to insure insect life in unlimited quantity.

This year Mr. Riley has exhibited at New York, Williamsport and Cleveland, O., with unusual success, winning seven first prizes and many other places on specials. This with his winnings of years are to be considered, but far greater, and the more to his credit, are the winnings made the past season by birds hatched from eggs he sold. In this list we find the first prize Boston cockerel; the third prize M. S. Garden, New York; cockerel; the first prize Chicago pullet; the first prize Rochester, N. Y., hen; the first and third cockerels at Guelph, Ont., in a class of 69 cockerels; the first Charlott, N. C., cockerel at the Club Annual Meeting Show; the first Cleveland cockerel; the first Lynchburg, Va., cockerel (at State Show). This is the record as he has it reported so far this year with privilege to use, and in this should also be included the first prize pullet at Philadelphia and second pullet at M. S. Garden, N. Y., last year. This tells the tale of quality Mr. Riley has and the kind he sells to his customers.

With this and his own record in view we were interested to again see his matings and we were soon busy in the pens looking 'em over. From the first it was evident to us that what Mr. Riley did for his customers he also did for himself. He sold them improved and winning stock, and he bred the same quality for his own use. His matings are small, evidently made with care, and here, too, we found reason for them as made. Mr.

Riley devotes all his time to his birds, knows them and their quality and prospects by experience.

Pen 1 is still headed by the first prize New York pen male of 1910. This noble fellow has made his mark as a breeder of value and this year is mated better than ever before.

Pen 2 has the same male as last year, a strong breeder and favorite of value.

Pen 3 has the first Baltimore cockerel of 1910 for its lord, a bird I always admired for his shape and very clean narrow barring.

Pen 4 is headed by his third M. S. Garden, New York, 1913, cockerel, a bird of exceptional quality and beauty. His color and barring are marvelous. He has filled out and today is better than ever before. I believe he will make a wonderful breeder of rare males. He is mated to eight select females, birds of rarest type and quality.

Pen 5. Here is Mr. Riley's famous winner and breeder. Last year he won second prize at M. S. Garden, New York,

#### Pullet Matings.

Of particular interest were these matings to us, for here in every yard we recognized winners and favorites that cackled in contentment and as if to greet us. Foremost in these females were noted Mr. Riley's two first prize M. S. Garden, N. Y., winning hens; the sweet hen from the fourth New York pen, 1911; the fourth and fifth pullets of 1913; the first Cleveland hen, 1913, and her daughter, that won first as pullet, etc., etc. All these and many more that have won the blue are here, and others of their same line and breeding. From pen to pen it was the same, all to be admired alike.

The males used in these matings were all we could desire in form and color and barring—line barring a feature and well under-barred, the white bar very clear and clean. They formed a royal lot, and feel we owe them every comment possible to them. Grand heads with low well-set combs and few serrations. Rich red eyes and splendid carriage were evident in all. They will bear out the record this line has made, and to us they seem much

E. W. GROVE JR., CLAYTON, MO.  
AMERICA'S LARGEST SPECIALTY BREEDER OF  
SINGLE COMB WHITE LECHORNS

and color special male. With this great show record he has since proven himself a marvel in breeding quality and has produced many first prize winners at leading shows, chief of which we would mention the first and third cockerels at Guelph, Ont. This is Canada's largest show, and this season had 69 cockerels competing. He is mated similar to last year and is bound to again produce the quality we all aim high for.

Pen 6. Headed by first Cleveland cockerel, 1912, a bird whose quality always appealed strong to us. We still consider him one of the few best we have ever handled. Other pens followed closely, and in each and all were the same rare quality and skillful mating. Most all the males used are noted winners or bred from such, and all give the assurance of highest breeding quality.

stronger and better than we have ever seen here before.

Mr. Riley has proven himself a man to bank upon with full reliance, and he has been honored by the poultry fraternity in a way to amply prove the esteem in which he is held by those who know him. For years he has been president of the Philadelphia Poultry Association and manager of their shows, which he has brought up to be one of the greatest and best in this country. This also is his second year as secretary and treasurer of the American Barred Plymouth Rock Club, where his influence has been felt, and the club has grown by bounds.

Poultry has his heartiest interests and after our years of personal acquaintance we can well say we have always found him a breeder and a man of worth to all his fellow men.

H. P. Schwab.

**"RINGLET" BARRED PLYMOUTH ROCK.**

Our Visit to the Home of Mr. E. B. Thompson, Amenia, N. Y.—H. P. Schwab, Irondequoit, N. Y.

From time immemorial events and deeds have been chronicled; in fact, they have made history necessary and valuable. War and peace, the arts and science, achievements, diplomacy, biography—all have had their share. Essential to a great people and the progress of nations, they have left behind records of, if not the actual work, of the great men of all times to the particular benefit of those to come after. The world is better for

Thompson had been a breeder and lover of better poultry. All prejudice and obstacles of early days were overcome by his earnestness, and from the day that he carried a pair of his favorite birds five miles to a show from his boyhood home at Smithfield to this day his progress has been up and up, assuring not only to him deserved success but with living examples leading the way that thousands since have followed to their advantage. The fraternity owes much to this man.

Just twenty-five years ago Mr. Thompson, exhibiting at Madison Square Garden, New York, won four first prizes with his "Ringlet" Barred Rocks. and now a quarter of a century later at the same show he again won four first prizes and many others of equal and unusual

is and the value of this line. There are the living models of Mr. Thompson's skill amid natural surroundings, 3,000 or more completing a flock the like of which we have never thought possible to produce. Back of all are the years of personal work of Mr. Thompson, and while we go to his place and admire his flocks as presented today we can just but stop a moment to consider, if we can, the amount of study with earnest labor these results have cost him. We fail to comprehend and can never tell in words just what the past thirty years in breeding have cost Mr. Thompson in mental and physical labor. The results assure them all success, and in this he must accept with credit the great work his persistency has accomplished for "better poultry."

SPECIMEN FEATHERS FROM THE "RINGLET" BARRED PLYMOUTH ROCKS.

their lives and examples, for if properly understood they assure advantage with greater success in the future. Every race and every people have had their great men, its leaders, and every industry and every line has received due and proper recognition at the hands of those born to lead.

The poultry as well as all breeding industries has produced its great men, and we can point with pride to many for the work they have done and the success they have made possible. One man in particular looms up strong and stands foremost among the poultry breeders of the world today. His work for over thirty years has been of continued progress and uplift. It is his life-work and his success reaches up to all that is possible in improved poultry. His records made and his success are the marvel of the age and will remain unchallenged for time to come. As a mere boy Mr. E. B.

value. Between these times he has been a consistent and a persistent exhibitor and winner, making a wonderful record during all these years in the greatest classes and fiercest competition ever known.

Exhibition records are necessary for comparison, and the great shows, when the prominent breeders exhibit, are the true test of value. The Madison Square Garden, New York, Show has always brought out the best—the best breeders and the best birds produced from every section of the world. There the "Ringlets" have been seen to advantage all these years. They have never been found wanting and their superior quality, combining shape, color and barring, have always placed them prominent winners. With all this we would still insist that to see this line at their best they must be seen at their home. There we can better appreciate what "Ringlet Quality"

We lately spent two days with Mr. Thompson—wish it could have been two weeks, for our interest was at its height. The phenomenal "Ringlet" record at the 1913 Garden Show was ringing in our ears. Its echo had resounded the world over with the tone of exceptional and striking value and drew like a magnet on our desires to see this whole line and to tell our readers of it. We have a natural fondness for the Barred Plymouth Rock. They best meet our ideal, and while we can and do admire all standard bred poultry and can see value and character in them, and have for years noted the great success others have made with other kinds of choice poultry, we still think the Barred beauties a little the best of all. This same opinion is probably shared by upwards of 100,000 breeders in the world today.

To us it was like a visit to the promised land. We had visions of what to

expect and hurried on in anxious expectancy to feast our eyes and mind—our eyes on the beauties of the wonderful "Ringlet" line and our mind with two days of companionship with Mr. Thompson that was sure to be of personal value. We were there to see and ask questions and were primed to the muzzle. This was one of the events of our life, and it was up to us to make the best of it.

A hardy greeting and a fast drive in a "Winton Six" took us quickly over the two miles of road to Mr. Thompson's home, where we hung our hat in the same old place and donned an old gray coat and cap kept for visitors. In this rig we felt very comfortable, and with Mr. Thompson and his son Valentine we headed for the great coops but a short distance away, where the crow of the lusty rooster and the cackle of the hens were music to our ears. Caruso in the Metropolitan Opera House would be but a side-show to the Vigorous Ringlet Choir.

Now we can't attempt to write and tell of all we saw in this article, but in passing over this plant we picked features for mention, as it is our purpose to give the reader an exact idea of this line as seen and what they will see should they also visit them.

#### The Cockerel Matings.

Heading one of the first pens as we entered was the fifth New York cock, 1913, a bird of wonderful "Ringlet" barring, clean cut and bright, a beautiful head and flaming red eyes. Yes, he won only fifth, simply because four others of the same line were further finished at the time. His mates are eight females of character, including two that were in Mr. Thompson's first prize cockerel mating pen at New York, a rare pen sure to give results. We saw this male as a cockerel a year ago. He was a leader from his first day to now. Quality bred in them tells. It is the kind to bank upon with the positive assurance of results. Stepping out of this pen into the aisle, we looked back to again inhale a general sight of the mating we saw. We commended every bird and particularly the even and rare quality as a whole, when Mr. Thompson told us he worked on that pen every day for a week to get them as they are now mated.

Let us consider and impress this fact upon memory. Here are all told probably 2,000 females. Each has its record and line history and both must be considered in proper and high-grade mating. We know of no breeder who looks closer to detail than does Mr. Thompson. It is his interest and his way. It is study and knowledge of the breeding secrets he has mastered. Can we now wonder at his success? A breeder who will put in two months of special labor on mating his yards, knowing the pedigree of every one and not satisfied until assured that every bird is just where it fits to assure improvement—such a man not only deserves success but is bound to obtain it. There is no stopping him.

Next and side by side were two pens, the first headed by his second New York cock, 1913, and the other by his third prize cock. Both are yearling cocks and both in perfect condition. Their combs are as clean and straight as on any cockerel. Wattles and lobes also in prime condition. It just happened that at the time of the New York show the one was a little past his best show shape and the other not quite ready with tail unfinished. Two better cocks never stood side by side. The second cock is the sire of his first prize and champion cockerel, New York, 1913, and of many more seen on this farm of about equal worth. This cock was sired by Mr. Thompson's New York (1910-11) first prize and champion cockerel. It runs in the blood, for he in turn is a quarter inbred son of the 1908 New York first cockerel and champion. The third New York 1913 cock on dam's side lines back fully to the 1908 champion. Here surely is blood of the richest winning lines. Both are mated with exquisite skill and quality, matings well worth any price Mr. Thompson could ask.

In a pen close by, with just five yearling hens, we saw a younger cockerel and a full brother of his 1913 New York champion. He is just finished and showed in all his glory the quality of his line. A bird without a show record, but most highly commendable for his line breeding and individual merit. The best of type, wonder in color and narrow barring and with all the vigor and style the Creator could possibly put into any one animal.

Next was the pen headed by the champion himself. Winner of first prize cockerel and champion male special at the 1913 New York show. The critics have all had their say, and all have proclaimed him the

# BUFF ORPINGTONS

At the Great Northern Ohio Fair, I won first cock, second hen, first and second pullets, and second pen. My Orpingtons are especially bred for size, for winning prizes, and for egg production. They will not disappoint you. I have five grand pens mated for the egg trade. Get my mating list. It is free. I have a few more grand males for sale that are buff to the skin. Write your wants, I can please you.

20th Century Hatchery - Box 73 - Chatfield, Ohio

best Barred Rock cockerel ever shown. At New York he was in his prime, and as seen here now, he stands out just as great and grand as when he won the highest honors obtainable at Madison Square Garden. The quality that placed him is just as evident now, and with his valuable breeding he is assured to produce results. He is grandly mated to eight hens. We handled them all. Red eyes, low combs, clean wings, beautiful form and strong but clean barring. We don't claim to be a prophet, but we don't hesitate to express our opinion that future champions are promised from this pen.

The runner-up was heading the next pen. His win of second prize at New York, 1913, is one of credit, for it took the champion, bred by the same man, to beat him. He looks, as seen here, better than ever, and we again handled him, just to have another look at his beauty, under-barring and phenomenal wings. His seven mates are all that we could desire, a rare mating of superior quality.

The cockerel heading the first prize New York 1913 pen followed, a son of the 1910-11 New York champion. Next the fourth New York 1913 cock, following were two pens headed by sons of his. These four pens were a delight to see. The pen winner is a particularly sharp barred bird of beautiful color; all strong matings.

We could write pages of the next bird, the first prize New York cockerel and champion of 1910-11. Strong and hardy, he shows the quality that won for him fame in the world's records of poultry. But today we mainly consider him from his breeding viewpoint; in this he has made his mark with a record of producing as bright as the sun that shines on the bright June days. Form and color are still his and his crow is a challenge for any to equal his record. Money can't buy this grand old champion today; his value is far greater than ever. Mated to five selected pullets of size and superior quality, he is sure to hand down more winners for time to come.

In the next house were seen mated the second and fifth New York pen cockerels, both full brothers that on sire and dam side line back to the New York champion of 1908. Then came the cockerel in his first prize cockerel mating pen, New York 1913, a royal fellow and one of the best. Other pens headed by this same line of males followed and several matings headed by cocks and cockerels of same line and breeding as the New York winners. These are all birds of quality, of the best possible color and barring, with form a feature throughout.

Here were seen three large houses and several colony houses, all filled with cockerel matings; both males and females were of his best and of the same lines as his New York winners, all mated with care and from which results seem assured.

### Pullet Matings.

At the late New York show Mr. Thompson won first prize pullet and champion female special. His female line has always been a strong one of quality and has always been well placed. This year his birds show wonderful progress and in the great Garden show he has been placed highest winner. With this in view his pullet line had special interest for us, and here we saw enough to fully satisfy all interest.

One of the first to attract attention was the sire of the New York winning pullet, a noble cock of clean, bright color and the best of line barring. Mates are same as last year, for Mr. Thompson can't see how he can improve that mating.

Two full-brother cocks followed next. They are the ones that bred the females in Mr. Thompson's first, second and fifth pens. Both are grand matings, with rare colored females of beauty barring, nice heads and the best of wings.

A pullet mating headed by a wonder cockerel attracted us next. For shape, vigor and clean, snappy, bright barring, he is a revelation. His barring runs in rings all around him in narrow lines, with a contrast of color we have been looking for, for years. Eyes flaming red, comb small, and entire make-up of the best. Mates are eight hens of Mr. Thompson's best. Another full brother of this male heads next pen and he is very close up in all ways.

"Estelle," Mr. Thompson's pride pullet, is in the following pen, along with others of her line. She was in short feathers at the time of the New York show; she is one of the handsomest now.

Every mating made and seen at the time of our visit was a gem, and we could not pick flaws. Mr. Thompson has a reason for every one; there is purpose in them all. In the past we have seen really wonderful matings there, but we have

never seen any to approach his matings of this year. No article can ever be written in limited time or space that can do full justice to the birds and matings seen here, for a proper account and description would fill a book.

From a study of these matings, we arrived at several conclusions. First, that Mr. Thompson values shape at its true worth. Every male used has size and type; red eyes, large and expressive; and they all stand well, strong and vigorous. The females are an even lot, good all over, and meet all requirements well. Mr. Thompson does not breed birds that are defective in any particular, or to mate birds weak in some ways to others strong in those same respects; his choice is for the birds of even and uniform quality in all sections. There is value in this and the results he has obtained prove his way the right one.

The record made by Mr. E. B. Thompson at the 1913 New York show is one of special worth; for quality and merit with value it stands foremost of all the records ever made at the Madison Square Garden show. Every bird shown by Mr. Thompson was of his own breeding, bred at his own farm and were conditioned and shown by him. This in itself means much; in fact, much more than many will realize. It adds to the triumph, the glory and satisfaction of quality breeding.

Visit this farm. Mr. Thompson will bid you welcome. You will see there "Ringlet Barred Rocks" worth while. You will see far more than my pen can describe and you will be better for it. Talk breeding to Mr. Thompson, ask questions, and rest assured that you have learned something of value. Mr. Thompson is pleased to have breeders call and inspect his stock and his place.

Mr. Valentine Thompson, like his father, is a born "chicken man" and is of the right kind to meet. He has been carefully schooled and like ourselves is one of the kind who believe they can learn something every day. For three or more years he has assisted his father in the mating of all pens and has had particular charge of the hatching and growing birds. What he has accomplished was seen by all attending the New York show, and seeing the "Ringlet" line there was the reward of his labors, and when the ribbons all had been placed, we heard his father say, while giving him a gentle slap on the back, "Val, you have done well." Yes, there was honor and credit enough for all in that win.

Our time passed altogether too quickly. We had seen much—far more than expected—and we had talked a great deal, received new ideas and felt our pride rising for being a fancier; we felt the advantage was all ours. Still it was with deep regret that departing time had come. With a farewell glance all around and with a hope of again having the privilege of a future visit, we bade farewell to Mr. Thompson and his family, and as we sped on to the great metropolis of America I just began to realize that the past two days were two eventful days of my life.

#### FENCE BARGAINS.

We are just in receipt of a letter from James Brown, president of the Brown Fence & Wire Co., of Cleveland, Ohio, in which Mr. Brown invites every one of our readers to write for his new 1913 catalog. If you need fencing of any kind, for any purpose, or if you will need fencing later, it will pay you to write to Mr. Brown at once. Brown fence is sold direct from factory, all freight prepaid wherever you live, and the prices are exceedingly low. Brown fence quality is such that over 25,000,000 rods have already been sold direct from factory to customers in all parts of the country. Brown's catalog tells all the facts. Write a postal now—address Dept. 3, Brown Fence & Wire Co., Cleveland, Ohio, and mail at once.

#### R. I. REDS AT BUFFALO SHOW.

Seldom is such an array of quality displayed as was seen in the Rhode Island Red classes at the Buffalo International, and one would go a long ways before finding a specimen that would surpass the first cockerel owned and exhibited by Henry W. Alt, 87 Fuller avenue, Buffalo, N. Y. This bird not only possessed shape that closely approached the ideal, but was a wonder in color: from head to tail. He was the center of attraction during the show. The balance of Mr. Alt's exhibit was of the same high quality and he was awarded many regular prizes as well as numerous specials, including the special for best display.

## How a Feed Mixer Will Pay for Itself

**A Feed Mixer is a REAL Economy on Any Poultry Plant, No Matter How Small. It Saves Time, Labor and Feed.**

Suppose you feed only ten quarts of mash a day. Do you know that's nearly 2 tons a year? Yes sir, 2 tons! Now you wouldn't mix 2 tons of feed by hand, if you had to do it in a day. Why, then, should you if you do it in 365 days? Your time is worth as much one day at another.

Let's say you spend an hour a day mixing feed. A mixer will do it better in half an hour. In a year, it will save you at least 200 hours. That's 20 working days. About \$40 worth of time, isn't it?

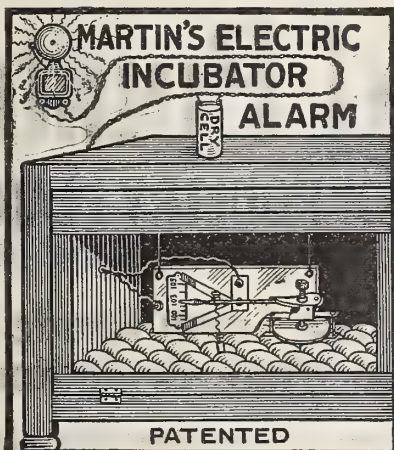

**NOW YOU SEE HOW A FEED MIXER IS A REAL ECONOMY**

### "AFTON FARM" FEED MIXERS

**FOR MIXING DRY FEED, WET MASH, SEEDS, FERTILIZER**

There are other advantages to a feed mixer. Your feeds are fresher and more palatable. They are smoothly and perfectly blended. They are more easily digested. This means that you need less feed, and that your stock is healthier. You can make up balanced rations and special feeds quickly and cheaply. You can mix seeds for sowing. You can make up your own fertilizers. The "Afton Farm" Mixer is used on hundreds of farms. It is always satisfactory. Simple, safe, thorough. Made in 15, 75 and 150-qt. sizes. Hand or power drive. Larger sizes made to order. Write for our free book, "The Secret of Master Feeders."

**Yardley Mfg. Co., Box D51, Yardley, Pennsylvania**

ment may be instantly set to ring the bell usually at about 100 for "cold" and 105 for "high" as shown above. The bell rings very strong and may be "cut off" upon reaching the incubator by a Special Automatic Plug, which also prevents it from ringing when the eggs are turned or cooled. Any dry battery operates it at least one season.

#### Four Years of Proof in an "Egg-Shell."

Iowa State College, Ames, Iowa. Prof. Wm. A. Lippencott, Poultryman.

"We have used your Alarm on a machine of standard make that for some reason had spoiled hatches for us three times in succession, and by using the Alarm we were able to bring to conclusion a very successful hatch. It informed us twice during the hatch that the temperature was too high."—March 26, 1910.

C. F. Jaeger, Columbus, Ohio.

"The four Alarms which I purchased from you were the means of saving my incubator and brooder house from being destroyed by fire, and I consider them the best investment I ever made in the poultry business."—May 4, 1911.

J. W. Parks, Altoona, Pa., Barred Rock Specialist and Proprietor Keystone Hatchery.

"I consider your Alarm a wonderful invention and have them guarding over 25,000 eggs for me at one time."—February 5, 1912.

Mound Hill Poultry Farm, Seville, Ohio, S. D. Hall, Proprietor.

"The Electric Alarm purchased last season works perfectly. It saved 100 times its cost last season."—January 18, 1913.

We are helping others, why not you?

We make special Alarm Systems for Poultrymen having their incubators located outside of their residence, and also for Mammoth Incubators and Brooding Systems. Write for circulars, stating what you desire to equip.

**DON'T RISK** another hatch when it only costs \$2.25 to enable that incubator to call when it needs attention. Here is what Martin has been working for and you have been waiting for, so act today and make hatching a pleasure.

## MARTIN'S MODEL "D" AUTOMATIC ALARM

Was designed to meet the demand for a simple, complete and inexpensive Incubator Danger Signal for those operating their machines in their residence and is perfectly adapted to these conditions. It may be instantly attached to any incubator and will last a lifetime. The little Alarm Attachment at any variation of temperature desired—shown above, The bell rings very strong and may be "cut off" upon reaching the incubator by a Special Automatic Plug, which also prevents it from ringing when the eggs are turned or cooled. Any dry battery operates it at least one season.

#### LIVES ARE AT STAKE.

Not only the lives of your chicks but the life of your business depends on the incubator. The success of every poultryman is measured by the number of chicks he can hatch and raise. It is absolutely impossible to secure large hatches of strong livable chicks when the temperature is allowed to run to abnormal extremes. You can insure the lives of your chicks and yourself against loss and worry by equipping your incubator with this safety device.

#### PRICES AND TRIAL OFFER

The price of an Alarm Outfit complete with an Alarm Attachment, electric bell, 12ft. insulated wire and instructions is only \$2.25. Alarm Attachment without bell and wire, \$1.75. Mail us your order at once and we will send your Alarm by return mail postpaid. Use it through 2 hatches and if not satisfied return and we'll refund your money. Address

**MARTIN MFG. CO., Ltd., BOX 24-A, BROADWAY, VIRGINIA**

**ARISTOCRATS.**

With leaps and bounds the Aristocrats have come to the front within the past few years, as no other strain in America. Their growth in popular favor is nothing short of marvelous. They are now in the very front rank among the many different families of Barred Plymouth Rocks, and it will not be long, if their present pace continues, until they will have outdistanced all competitors East or West. In fact, even now they are away in the lead in rich, deep-blue color and extraordinary, fine, narrow barring down to the skin. We predict an unprecedented demand for these superb and truly royal Aristocrats from all parts of the world. See if we are not right.

The cut of a trio of these Aristocrats which graces this month's issue of our journal will show you plainly just why this is so. Made from a photograph of the birds, this cut typifies quality, quality unsurpassed. Study the birds shown there—study them closely, carefully. These are not imaginary birds—these are birds as they are actually living right now, birds that are right now mated together as you see them here, birds which are right now producing fertile eggs. Here at last is something you can tie to, something you see actually before you, something real, by which you can judge what kind of birds produce the eggs which you may order for your own use this season.

This is simply a sample of the birds you will find mated at this time in the yards of their proud owner, W. D. Holterman, fancier, Box A, Fort Wayne, Ind. These are, of course, some of the very best, but he has quite a number of young birds out of these grand breeders which he has distributed among his few pens. Some of these young birds are even bet-

ter than the trio shown here. All the birds in all his selected matings are birds of superb quality. When ordering eggs, please bear this in mind, that Mr. Holterman mates up comparatively only a few pens, but of the very highest quality. QUALITY is his motto from beginning to end.

We would say to our readers that you may safely order eggs from Mr. Holterman directly from this article. He is a fine gentleman to do business with, honest, courteous and liberal. He guarantees eight (8) strongly fertile eggs to each setting and you may depend upon it that he will faithfully live up to this agreement. The price of the eggs from his carefully selected matings is \$10.00 for fifteen (15), or \$25.00 for fifty (50) eggs. In fifty-three shows thus far this season Aristocrats have won out in the hands of Mr. Holterman's customers, so Mr. Holterman informs us. All these winners were hatched out of Aristocrat eggs. These shows included some of the largest in America. Truly a wonderful record! It is a pleasure to us to recommend so strongly to our readers a man and breeder of the caliber of Mr. Holterman. It will surely pay you to get in touch with him if you wish to breed winners for the shows next winter.

**S. C. WHITE ORPINGTONS.**

It really is a reminder of the past to write the name of C. L. Pensyl, Bloomsburg, Pa. In the yesterdays of the past this name was one of the foremost in the poultry world, and to all Buff Rock breeders it will still have a ring, for Mr. Pensyl was one of the early breeders of this variety and an exhibitor that always had to be figured with at New York and other leading shows.

For the past two or three years he has

been devoting his time to perfecting a line of White Orpingtons, and step by step he is again climbing the ladder to poultry fame. By winning at Bloomsburg for two years about all competed for, then at Scranton, 1912, where, in a class of 23 cockerels, he won first, second and fourth, he finished by getting valued mention at the great Allentown Fair, with a dozen great breeders competing, and then won fourth hen at Madison Square Garden, New York, as the final for the season. At Scranton, January, 1913, the White Orpingtons were the largest class in the show, and his winnings were cocks, first and second; hens, first; cockerels, first and second; pullets, first, third and fifth; \$100 challenge cup for best Orpington, all varieties competing, and several other specials.

Orpington breeders should have his circular; it's free.—H. P. Schwab.

**VALUABLE WHITE ORPINGTON MALES.**

February 26, 1913. We have this day sold "Snow Drift, Jr.," and "Snow King" to Frank W. York, Portland, Me. These cocks are a positive "stay white" and the two best males we ever owned, and we believe "Snow Drift, Jr." to be one of the best White Orpington males in the world. AUG. D. ARNOLD.

**A FREE SAMPLE COPY**

Of the Reliable Poultry Journal, one of the most practical poultry papers published, will be mailed upon receipt of a postal card request. A 4-months' trial subscription will cost you only ten cents. Stamps are acceptable. Address Reliable Poultry Journal Pub. Co., Box E-13, Quincy, Illinois.

BREEDERS OF

### Single and Rose Comb Rhode Island Reds and White Orpingtons

We are prepared to furnish the choicest quality in stock, eggs for hatching and day-old chicks. Our stock was exhibited this year at the great Pittsburg and Erie shows. Our winnings were as follows:

#### Single Comb Rhode Island Reds

1st, 4th, 5th and 7th cockerels; 1st and 8th pullets; 1st, 2d and 6th pens; 3d and 4th cocks; 4th hen; 4 specials for type and color.

#### Rose Comb Rhode Island Reds

1st, 2d and 3d pullets; 2d and 7th cocks; two specials for type and color.

Day-Old Chicks from Our Exhibition and Utility Stock a Specialty—Our hatchery is one of the largest in the country, having a capacity of 100,000 chicks. We are now booking orders for Spring delivery. Write us for further information and catalogue.

## Idlewood Poultry Farm : Swanville, Penna.

## PARTRIDGE ROCK MATINGS.

This office is in receipt of a neat booklet describing the Partridge Plymouth Rock matings owned by Mr. S. A. Nofztger, Box 28, North Manchester, Ind.

Mr. Nofztger does not hesitate to call his forty matings "The Best in the World," and bases his claim on the fact that the Partridge Rock fowl was originated by him, that he is the oldest breeder in the world of this breed, consequently the most experienced in mating. Further, Mr. Nofztger points to the winning record of his birds, showing that during the years of 1908-1909-1910-1911 and 1912, his birds, bred and exhibited by him, have won more first prizes at Chicago, Kansas City, Topeka, Indianapolis and New York than the combined first prizes won by all competitors.

He goes further and claims the males heading his matings to be the forty best in the world owned by any one breeder, adding that he is willing to exhibit them against any one at any National show, in case his assertion is disputed.

This certainly is fair and indicates that Mr. Nofztger truly believes what he writes. Incidentally this man Nofztger ought to know what he is talking about when on the subject of Partridge Rocks.

We are getting away from his 1913 booklet. It is clearly written, is very explicit and comes as near to giving his customers an actual knowledge of the real birds contained in each mating, their prize record and breeding lines, as any mating catalog ever written.

In addition Mr. Nofztger gives his guarantee on eggs for hatching, which, to say the least, is a liberal and perfectly honest guarantee. This season he ships fifteen eggs to the setting and guarantees every egg to be fertile. What more could a customer want?

As Mr. Nofztger already has hatched over two thousand chicks, some of which are now good sized fries, he will not need quite so many females in his yards. In other words, a less number will be necessary from now on to lay the eggs required to fill egg orders and supply those for his own incubation; therefore he is in position to supply customers with a few choice birds in males or females.

This is indeed an opportunity which our readers should take advantage of.

During the month of May, Mr. Nofztger will offer still more of his breeders for sale at exceedingly low prices, quality and blood lines considered.

One thing this good breeder is a "stickler" for and that is "Quality." He certainly gives good advice at the bottom of page 36 in his mating booklet, in which he says: "If you can't afford the best, get the best you can afford." On still another page we note something good and original—and, by the way, it sounds just like him. It reads: "A face to face meeting has a pen and ink, greeting beat a mile. Come and see us."

It is a known fact that Mr. Nofztger enjoys himself best when showing an interested visitor his yards, birds, etc.

But, above all, don't forget to write him for one of these booklets. He will pay the postage and mail it free if you simply write and ask for it. Of course, it won't hurt to send him a stamp or two to help pay the postage if you have a few handy.

## A BOOK YOU SHOULD HAVE.

There is a mighty good book issued by the General Roofing Mfg. Company entitled "Modern Building Ideas and Plans," which we believe every one connected with the poultry business should have. It has pages brimful of helpful suggestions for the erection of all kinds of buildings.

Among the numerous illustrations there are several of poultry houses which will interest you. You realize, of course, that in this kind of weather you have to keep the hen house pretty comfortable if you are going to fill the egg basket, and this chapter contains suggestions which will enable you to maintain an even degree of heat, eliminate drafts and provide the necessary ventilation.

This book will be all the more valuable to you because it was not written with the intention of selling you anything—the reason why the General Roofing Mfg. Company can let you have this book free at your dealer's is because it shows just how attractive Certain-teed Roofing looks on the roofs of various houses and illustrates many uses for this modern, easy-to-lay building material.

This company has made arrangements with the various hardware, lumber and material dealers so you can get a copy

without cost. You do not obligate yourself to buy anything, either from the dealer or the General Roofing Mfg. Company.

A book of this kind should be in your possession. We recommend that you get a copy. If you can't find a dealer in your town who will get you a copy write the advertising manager of this paper and he will see that you get one.

## A 200-EGG INCUBATOR.

The most difficult problem of all poultry raisers has been entirely overcome by a German poultry specialist, operating in this country, through his simple Natural Hen Incubator, which uses the hen herself. The problem of getting as strong and healthy chicks as the hen herself could ever hatch has confronted incubator manufacturers practically ever since the first incubator was manufactured.

No manufacturer has even been able to claim such a feature on his incubator, until Mr. Siems put his system on the market several years ago, which has won raisers.

The system patented by Mr. Siems is astoundingly simple, even though it offers the poultry raiser far more advantages than have ever been found heretofore.

The Natural Hen Incubator has proved a success in every way. It does away with lamps, oil expense and trouble, hot death-dealing fumes, uncertainty of temperature, and the possibility of losing the entire hatch by allowing heat to go out.

In the Natural Hen Incubator, where Mrs. Hen is the controlling feature, she is kept strictly on the job until the entire hatch is produced, and it is safe to say that her work with the Natural Hen Incubator has a much higher degree of certainty than she has ever been able to claim where she worked independently and alone. The uniform hatching produces a larger percentage of chicks.

The address of the Natural Hen Incubator Company is Station H., Dept. 4, Los Angeles, Cal.

Simmons & Crittenden, Geneva, Ohio, will have many fine breeders for sale after May 20th. Anyone who desires to get some choice Rose Comb Rhode Island Red breeders at reasonable prices should bear this in mind.

# BESUDEN BROS.' CHAMPION BUFF WYANDOTTES

Have proven their superiority over all others by their wonderful and unequalled show record.

At six of America's greatest shows in the fiercest competition they won 30 out of a possible 32 first prizes and nearly every other prize of importance. Showing at the Great Coliseum Show, Chicago, Nashville, Ohio and Indiana State Fairs, Hamilton and Cincinnati Shows.

This record demonstrates certainly beyond doubt that we have

## The Real Champion Buff Wyandottes

For the 1913 egg trade we have 20 of the most beautiful pens ever mated. Each bird at the head of every pen is a noted winner. All mated with the finest lot of Buff females in existence. Over twenty years of scientific breeding and rich blood lines back of this flock.

## The List of Winners Heading 1913 Matings

Cockerel—First, Cincinnati, 1913.  
Cock—Sturdy Boy First, Boston, etc.  
Cock—First, Cincinnati, 1913.  
Cock—First, Nashville, and Ohio State, 1912.  
Cock—First, Chicago, 1910.  
Cock—First, Toronto, 1911.  
Cockerel—First pen, Chicago, 1912.  
Cock—First, cockerel, Columbus, 1912.  
Cock—First, Cincinnati, 1912.  
Cockerel—First, Pen, Cincinnati, 1913.

Cock—First, Grand Central Palace, 1911.  
Cockerel—Second, Cincinnati, 1913.  
Cockerel—First, Nashville, 1912.  
Cock—Second, Boston, 1911.  
Cock—Second, New York, 1911.  
Cock—First, Indiana State Fair, 1912.  
Cock—First, Columbus, 1912.  
Cockerel—First, Hamilton, 1912.  
Cock—First, Pen, Boston, 1911.  
Cock—Fourth, Chicago, 1912.

We will raise chicks and sell eggs from every one of the above matings. To win the most coveted prizes you must have Champion Buff Wyandottes.

THE GREATEST SHOW BIRDS.

THE MOST WONDERFUL LAYERS.

## INCUBATION.

The Hall Mammoth Incubator Company, who were the originators of Mammoth Incubators and who have behind them a record of nearly forty years of continuous experience in incubator construction and operation, are not content to rest wholly on the laurels of past achievement.

Their latest step toward keeping pace with the progress of the hatching industry is the establishment of a research laboratory in incubation. This enterprise has been under consideration by the Hall Company for some time, but a commercial laboratory is more difficult to launch properly than a scientific one.

If, for instance, a man whose training has been purely scientific be put in charge, he will tend to devote his energies to those phases of the work which may be better handled in universities or at government experiment stations. On the other hand, if the enterprise is left wholly to a practical man, who is not schooled in science, he is likely to fail to grasp basic principles in his thinking; and, because of his lack of scientific training, his findings are in danger of being discounted by the scientific world.

In the incubator business—at least from the manufacturer's viewpoint—the research man must be not only a poultryman, but also a mechanic or engineer. From biology, chemistry and practical poultry culture, he will derive his problems, but he will have to work them out in the machine shop. Above all he must know human nature and appreciate what the busy poultryman can understand and utilize and what he cannot, or at least does not, take time to learn.

The man who best combines these qualities in the eyes of the Hall Company is Mr. Milo Hastings, who was selected to take charge of this research laboratory department and who quietly began the work the first of the year.

Mr. Hastings constructed his first incubator at the age of eleven. His father was a retired minister living on a farm near town and the son worked his way through high school with a flock of hens. Entering the Kansas Agricultural College, he immediately applied for and secured the position of poultryman, which place he held until graduation.

At this time (ten years ago) experiment station poultry work in the Middle West was in its infancy and appropriations meager. Despite the difficulties Mr. Hastings built up quite a plant and published several poultry bulletins. In 1904-5 he conducted the first experiment station egg laying contest in the United States. In conjunction with the chemical department he completed one of the most thor-

Government to undertake a nation-wide study of the egg trade. While awaiting the beginning of these duties he was employed in the egg department of the Armour Packing Company.

Of Mr. Hastings' work in the Department of Agriculture and his findings concerning the losses in egg marketing, cold storage methods, etc., the poultry world is familiar.

Since resigning from the government service, Mr. Hastings has had headquarters in New York City, and has been engaged in poultry and scientific writing and as an engineer or expert in cold storage and incubating problems. He has designed and constructed a number of poultry plants and installed several large hatcheries. For the last two years he has been largely engaged in private investigations in incubating, which research will be continued with the larger facilities which the present connection will offer.

Mr. Hastings is exceptionally well traveled and has studied the poultry and hatching industries from the Atlantic to the Pacific and from Canada to the Gulf Coast. During the past year's hatching season he spent five weeks in the world-famous poultry district of Petaluma, California, where the hatcheries within a ten-mile radius have a combined capacity of nearly a million eggs at one time.

With the source of practical information and opportunity for the study of hatching on a large scale which the Hall Company and its patrons can place at his disposal, a man of Mr. Hastings' ability and experience may certainly be expected to add something worth while to our store of knowledge. Moreover, when there is anything new to tell, the poultry public may look forward to something readable as well as informative, if the opinion of Mr. H. H. Stoddard, himself a veteran poultry writer, is to be taken as a criterion. Mr. Stoddard in the American Poultry Journal, of which he is associate editor, recently said:

"As a general poultry book, the Dollar Hen is the best by long odds that I ever held in my hand. Aside from the subject matter of the work, Milo Hastings, the author, has used in its pages some of the best English that has ever appeared in poultry literature to my knowledge."

First and champion Barred Rock male at National meeting of the Barred Rock Club, Charlotte, Jan., 1913. Bred and owned by M. B. Hickson, Lynchburg, Va.

ough analytical studies of eggs that has ever been made.

After taking his degree at the agricultural college, Mr. Hastings took up special work in egg bacteriology. While at the Kansas Experiment Station he had made a special study of the egg marketing business of his state and had interested the United States Department of Agriculture in the problem. As a result he was later appointed by the Federal

# BESUDEN BROS.' PURITAN PARTRIDGE PLY. ROCKS

Their wonderful winnings at four of the leading shows demonstrates the quality of stock we have in our yards. At Chicago, Louisville, Indianapolis and Cincinnati Shows, in hot competition, we won every first we competed for except two.

Our Grand Champion Cock, Pride of Ohio, winner of championship cup at Cincinnati, and First at Indianapolis, will head one of our matings. Breeders and judges pronounced this bird as the most typical Partridge Rock they ever saw. For the 1913 eggs trade we have 10 Very Select Matings.

Every pen headed by a male of the richest blood lines. We know that we can furnish our customers with as good Partridge Rocks as any breeder in the world—and at very reasonable prices.

## LIST OF MALES HEADING 1913 MATINGS

- Cock—First, Cincinnati, 1913; First, Indianapolis, 1913.
- Cockerel—First, Cincinnati, 1913.
- Cockerel—First, Louisville, 1912.
- Cock—Heading First Pen, Cincinnati, 1913.
- Cock—Second at Cincinnati, 1913.
- Cockerel—At Head of First Pen, Louisville, 1912.
- Cockerel—Third, Indianapolis, 1913.
- Cockerel—Heading Second Pen, Chicago, 1912.
- Cockerel—Sired by First Madison Square Garden Male.
- Cockerel—Full Brother to First Chicago Cockerel.

These males are mated to female winners at Chicago, Louisville, Indianapolis and Cincinnati.

We also have in our yards the wonderful pullet, Chicago Queen, winner of First at Chicago, Dec., 1912, and hen from First Madison Square Pen. Also that great breeding hen, Rose of Oaklyn, the greatest breeding hen in this country. We will sell a limited number of eggs from every pen. Orders for eggs should be booked early. Send for our free beautifully illustrated mating list.

### MONMOUTH FARMS.

We have just received the catalogue of the Monmouth Farms, J. Courtney Punderford, owner, Freneau, N. J., and find it a creation of artistic skill and valuable common sense text. In this is shown a color plate of a trio of Mr. Punderford's S. C. Buff Leghorns taken from his first prize pen at Madison Square Garden, New York, December, 1911. It is a beautiful piece of work, in fact admirable. The cockerel, as well as the two pullets, in shape and style are life-like and as rare specimens as have ever been shown of this variety. In color they are the correct shade well for all breeders to follow. Mr. Punderford has led the way with his

Buff Leghorns for years, and in his efforts to produce and give his customers the very best has met with wonderful success.

In S. C. White Leghorns this line has also been placed up with the leaders, for with them Mr. Punderford has won honors and fame almost equal to that of his buff line. At Atlanta, Ga., December 14-21, 1912, in competition with a great class he won on White Leghorns—Cocks, 1, 2, 3; hens, 1, 2, 5; cockerel, 2, 3, 4, 5; pens, 1, 2, and Sweepstake Special for best cock bird in the show. Then showing sixty birds of both varieties he had fifty placed birds and winning the best prize offered on cocks in the show.

This year at Madison Square Garden,

New York, he entered but one pen of Buff Leghorns, and for the fifth year in succession won first pen.

The catalogue gives a careful description of all matings in both varieties, letting the buyer know just what he has put in each pen and what they may expect from each. There is value here and every Leghorn man should have the catalogue.—H. P. Schwab.

### BEFORE SUBSCRIBING

For the American, look up our special offer on page 631 of this issue. Quite a saving in price is made by taking advantage of the special combination rates quoted.

**C. H. WELLES, STRATFORD, CONN.**

On our return from the east we spent a day with C. H. Welles of "Fluffy-Ruffles" fame, and if he never did another thing, he could retire, ever receiving the plaudits of the appreciative breeders for what he has done for the Barred Plymouth Rocks. We have written pages of "Fluffy-Ruffles" and pages more of her progeny, and as long as time lasts, the breeders will refer to her and with credit claim some of her blood lines. There never will be any better.

This season Mr. Welles has made his matings with particular care; he has the Fluffy-Ruffles line intact, and this with the line of his 3rd New York hen, represent the two lines of females that have made his reputation as a breeder and held it up on the very highest pinnacle of merit.

**Pullet Matings.**

We have noted these matings for years and last year said he had the best we had ever seen. The result has fully borne out that statement, for after selling for many years at the leading shows birds that won, he has here this year again a greatly improved stock of birds, sure to again produce the quality demanded of him.

The first pen entered was a very bright clean pen of females with extra nice wings and a rich colored and narrow barred male of beautiful form and fine head, strong red eyes, etc.

Pen Two—A combination of excellence, the very highest type of exhibition females, correct in color and barring, all have the best of wings and are cleanly

under-barred; shape with even, sound color is a feature here; size excellent, all over standard. These females were all hatched June 12th and 16th, last year, going to show that late hatched birds can be matured and that they have the very best and richest of color. The cock heading this pen is a marvel in general quality, grandly barred, very sharp and narrow and of extra carriage. A pen of particular merit.

Pen Four—A beauty male and very bright and snappy females. We will expect grand results from this mating. All here line back to "Fluffy" and her sire.

Pen Five—Very much like pen two and a wonder in all-around quality. The cockerel for a light bird has the true blue cast and is most beautifully barred. A large, strong fellow who stands well. We dote on the females in this pen; all are of the best and here one in particular is about the sweetest to be seen any place. I doubt if one her equal ever lived. We told Mr. Welles that if she kept coming she would remind us of "Fluffy" in her palmy days. Nothing can beat "Fluffy," but this looks like a near one.

Pen Six—A grand male with full and low carried tail, and the best of under-color and very even surface color and barring. The ten females here are a selected lot of choice quality. Wings of the best and straight barring of equal width.

Pen Eight—Headed by the male we wrote of particularly last year. He has proven a wonderful breeder and as now mated should produce better than ever before. His mates are marvels in quality, surface and under and all have the best of wings.

Pens Fourteen and Seventeen are in the same class; all females alike and of even quality, uniform shape and well carried. Both are headed by exquisite cockerels, full of character from which results can be expected with every assurance.

Pens Nine, Ten and Sixteen are very close up. Here runs the blood lines of Mr. Welles' best just as freely as in the other matings. Males and females are all we could desire in real high class matings.

**Cockerel Matings.**

While Mr. Welles' specialty is the female line, his cockerel matings have always been a feature. Referring to the M. S. Garden, New York, Show records we find he has won nearly as many firsts and other awards on males as he has on females. His record of winning four of a possible five firsts at the garden a few years ago is well known and at the 1911-12 garden show he won first prize cock and "champion male special." His cockerel matings this year, of which there are three, are all headed by sons of that cock. They have his exquisite narrow barring, grand under-barring and splendid type. The females are a grand collection of rarest breeding quality, snappy and strong barred, with fine breasts, full and low carried tails and the best of eyes.

With grand and uniform mating in all three pens we feel safe in predicting results here. Blood lines are sure to tell. - Mr. Welles did not show the past season, as he was called to judge the Barred Rocks at Madison Square, New York, where he handled the hens, pullets and pens, and at Boston, where he judged the whole class, which was one of the largest

Of the new breeds that are at present holding the attention of the American Poultry Fanciers, none is more worthy of this interest, both from the standpoint of beauty and utility, than the Silver Campines. The great danger that the breeder of this variety must guard against, is contamination of Brackel Blood. The unusual demand for these birds exceeds the supply of pure-blood fowls, and, in consequence, many unscrupulous foreign breeders have not hesitated to misrepresent the blood lines of their birds. I have had the opportunity of visiting the yards of Mr. Frank E. Hering, at South Bend, Ind. I have handled his birds and photographed his winners at the recent Chicago Show. His plant and his birds are alike worthy of admiration. The type and markings of his Silver Campines come as close to the accepted standard as any birds of this variety that I have handled this year. Louis A. Stahmer, A. P. J.

ever seen there, a rare compliment for Mr. Welles.

Mr. Welles' mating list is sent for the asking. Get this, look it over. The "Fluffy Ruffles" line will satisfy you with quality, depend upon that.—H. P. Schwab.

#### CRYSTAL STRAIN WHITE ROCKS.

Mr. C. G. Mueller, Lansdale, Pa., the owner of the Model Farms at Lansdale, Pa., and breeder of the Crystal Strain of White Plymouth Rocks, has issued one of the nearest catalogues we have seen and which he is sending free of charge to all interested breeders.

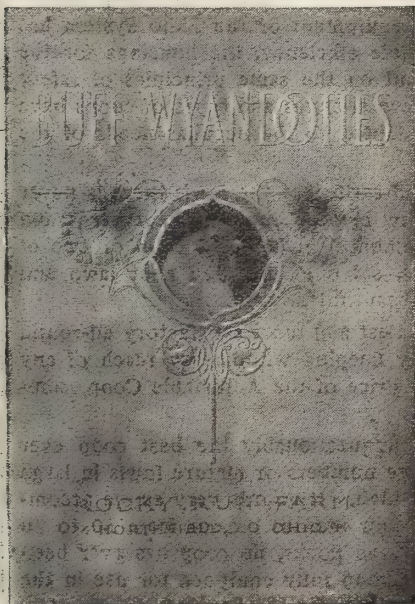

We have visited these farms and personally know Mr. Mueller and his stock. The farms are located close to Lansdale and in one of the best poultry sections we know of; soil and climate seem particularly well adapted to poultry growing. The farms consist of fifty acres, all of which is devoted to White Rocks. The equipment is complete in detail, the land gently sloping to the south.

Eggs for hatching, baby chicks and choice stock are the specialty here, and the demand that has been created is surprising to all but those who know Mr. Mueller's way. He gives his personal attention to all orders and is his own manager as far as running the business goes. Poultry has always been his hobby, but it, like all his interests, has strict business principle back of it that further assures confidence in the man and stock.

The article in his catalogue, "Why We Breed White Plymouth Rocks," is well worth reading, for it shows the man who wrote it at his true form. We have before written of this plant, and we hope to soon again visit them and tell our readers more of their stock. But as the season is getting late we wish to call attention to their goods and have those interested get a catalogue.—H. P. Schwab.

#### A BUFF WYANDOTTE CATALOG WORTH WHILE.

What is probably the best Text Book and Catalog on the breed has recently been issued by the Rocky Run Farm. Comparing in quality, as far as the printing goes, with the best issued by any mercantile firm, it is far ahead as a Text

Book on the breed of any other Catalog ever received at our office, and the book is easily worth a dollar to any Buff Wyandotte breeder. To increase the interest in the breed they are sending it for 25 cents, just what it cost them. Better send for it at once to Rocky Run Farm, Box 50, Northfield, Ohio.

#### AN ERROR.

In our March issue appeared the advertisement of H. A. Jacobs, Peoria, Ill., in which was stated he was a breeder of White Plymouth Rocks. This was an error, as Mr. Jacobs is a specialty breeder of trap-nest pedigreed prize-winning Buff Plymouth Rocks. He is offering a limited number of eggs this season from his trap-nested matings. Write him and mention American Poultry Journal.

## Rose Comb Black Minorcas

First cock, first hen, first cockerel, first pullet at St. Louis 1912; first cock and first hen on White and Fawn Indian Runner Ducks. J. S. BALES - ROUTE 2, SPRINGFIELD, ILL.

### INTERNATIONAL CHAMPIONS

Birds from my yards have won at Dairy and Palace Shows in England, also in New Zealand and at every big show in Canada, New York State Fair 1911 and 1912, ten firsts; Michigan Roundup show, five firsts; Madison Square 1911, 1st, 2d, 3d, 5th and 6th. Birds sold on approval. Duty paid to the United States. Send for mating list. Please mention American Poultry Journal when writing.

HIGHWORTH POULTRY YARDS : Fred A. Andrewes, Prop. : LONDON, CANADA

## Let Chas. A. Cyphers Save You 50% On A Standard Buffalo Incubator

The Cyphers who is "The Recognized Authority" on Artificial Hatching.

The Cyphers who made Commercial Hatching Possible.

The Cyphers who discovered the Cyphers Principle.

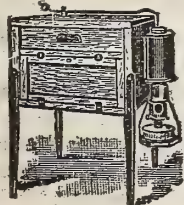

The Cyphers whose Incubators Circle the World.

The Cyphers who will sell you his latest creation, the "Buffalo" at half the Standard Price.

**Let Me Save You 50%** My new Incubator, the Buffalo, fulfills the life-long demand of thousands of poultrymen. It offers all the quality of the best high priced incubators, at just half the price of any other incubator containing the Cyphers Principle.

## Sterling Principles Maintained

Every vital principle that made my Original Cyphers a World Success is embodied in the Buffalo. The same three-compartment heater; the diffusive ventilation; and the sensitive and accurate regulator; combined with heavy insulation and durable construction; with refinements not included in the original. Buffalo Incubators insure you big hatches of strong chicks that live and are easily raised to make money for you.

The Buffalo is simply a wonder. I am proud of it. There is nothing cheap about it but the price.

I offer you an incubator that is second to none in **Durability, Reliability, or Quality.** You can't get a better incubator than the Buffalo, no matter how much you pay. You can't get one as good. There are incubators and incubators, and nearly any of them will hatch some chickens. The biggest profits are made by operating the Buffalo, which will hatch a strong and vigorous chicken from every hatchable egg.

### Note My Low Prices:

Offer No. 0—50 to 60 Egg Size—Ship. Wt. 65 lbs. \$10.50 | Offer No. 2—220 to 240 Egg Size—Ship. Wt. 130 lbs. \$19.00  
Offer No. 1—110 to 120 Egg Size—Ship. Wt. 90 lbs. \$14.50 | Offer No. 3—340 to 360 Egg Size—Ship. Wt. 160 lbs. \$24.00

My Brooder Prices Are Equally Low.

## The New Big 4 1620 Egg Capacity INCUBATOR \$94.00

An Incubator—and a hatcher—occupies same floor space as any standard 360 egg machine. Incubating section run in conjunction with your present hatcher will increase its capacity by 1080 eggs.

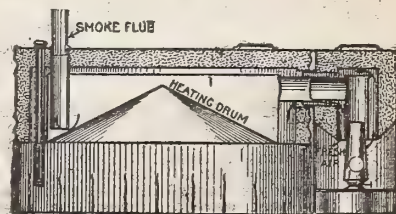

Incubating section alone, 1080 egg capacity, operated with one lamp, costs but \$60.00.

### Something New in Hovers

Buffalo Handy Hover \$8

Buffalo Home Hover \$7

The Buffalo "Handy" is a floor level hover—sanitary—perfectly ventilated—heats easily—uses little oil—flame can be seen without stooping. Send postal for fuller description, or better, send along your order before we are over-sold.

Buffalo Handy Hover—100 Chick Capacity

**Chas. A. Cyphers,** President Buffalo Incubator Co., 465 Dewitt St., Buffalo, N. Y.

**A. C. HAWKINS, LANCASTER, MASS.**

Lancaster, Mass., is one of the places put on the map by a poultryman and for thirty-five years or more Mr. A. C. Hawkins has kept it there and yearly has made its influence felt to a greater extent. He is one of the old guard, one of the very first to take up the Barred Rocks, and from the very beginning has been their loyal champion. He is one of the three men that the future will look to with honor for what they have done for the variety.

Mr. Hawkins' career is one of interest. From the first he has been a leader, always progressive, and an exhibitor and winner at Madison Square Garden, New York, from their first to last show. Since January, 1909, he has won first cockerel twice at New York and several other awards on cockerels and cocks, including first and special prize cockerel mating pen January, 1912. At Chicago, December, 1912, he won four first prizes and champion sweepstake cup for best display.

From the breeder's point of view Mr. Hawkins is a past master in the art of mating, and in both cockerel and pullet matings he has shown birds that have won undying fame for him and his customers the whole world over. At the late New York Show he made a display of a pen of his pullet breeders that attracted special attention. In even, bright surface, narrow, clean barring in surface and under, exquisite style and shape, the male seen here was a model worth patterning after. The females are of the same high class. At Boston he displayed a pen of cockerel breeders of greatest worth; here again the male was a wonder in shape and the best of barring; he was a model, snappy, clean and bright, of proper rich blue shade. The females were of equal and exceptional worth.

Besides the Barred Rocks, Mr. Hawkins also breeds White Rocks and Columbia Wyandottes. In White Rocks he has been a consistent winner for years at Boston. There in 1912 he won about all offered and for year has a fine record there. We hope to visit Mr. Hawkins again later and to write of his matings. His new catalogue for the asking.—H. P. Schwab.

**ROSEMONT FARM'S S. C. BROWN LEGHORNS.**

It has been a long time since we saw such a fine lot of Brown Leghorns when we visited Rosemont Farm, Webster Groves, Mo. Mr. Shultz, who has bred this strain for the past nine years, is an up-to-date fancier, and always wins the blue ribbons in the large western shows. His hen, "Rosemary," has been pronounced perfect by such leading man as Judge Heimlich. Mr. Shultz informs us that he will sell a limited number of eggs from this bird. Any reader of American Poultry Journal should not overlook this fact. Write Mr. E. V. Shultz, Webster Groves, Mo., for mating list and any other information about Brown Leghorns. He is a man who knows. We guarantee him.

**JAMES S. BRADY, PARKERS LAND-ING, PA.—S. C. WHITE ORPINGTONS.**

It is seldom we have the opportunity to chronicle a sweeping victory such as was made by Mr. J. S. Brady at the late Pittsburg Fanciers' Club Show, held February 17th to 22nd, 1913, when in a great beauty class string in numbers and in quality he won: Pen, 1st; cock, 1st; hens, 1, 4, 5; cockerels, 1, 2; pullets, 2, 3, 5. Display, special; two cups, and the Sweepstake Special for best pen in the show.

In mating, evenness and extra condition it is hard to imagine a stronger or better pen than this. The male, a wonder in form, grandly carried and at his best. The four females, all alike and of the choicest quality and of even grade. Both the first and second cockerels were in a class by themselves, nice fronts and backs and nice heads. All birds had extra strong red eyes.

In this exhibit Mr. Brady has proven his mettle and worth as a breeder, he has brought his birds right up to the front and promises to keep it there. He deserves success for all he has done.

Mr. Brady's record in the show room for the past several years has been a very enviable one. The first prize cock bird at the late Pittsburg show was first cockerel at the same show in 1912. His noted hen, "Lady of Quality," won 13 first prizes without a break, and he informs us that he has another hen that is

her equal, if not her superior. Princess Mary is her name. She has been exhibited twice and won twice. He is making a specialty of shipping eggs for hatching by parcels post this season and is ready to fill all orders, no matter how large or how small. Get into communication with him if you want something good in White Orpingtons.

**M. B. HICKSON, LYNCHBURG, VA.**

On our return from the Charlotte, N. C., show we had as a fellow passenger (part of the way) Mr. M. B. Hickson, a man whom we consider one of the shining lights of the fancy in the Southland. Our reason for forming this opinion is based upon what Mr. Hickson has done for better poultry in Virginia and the South.

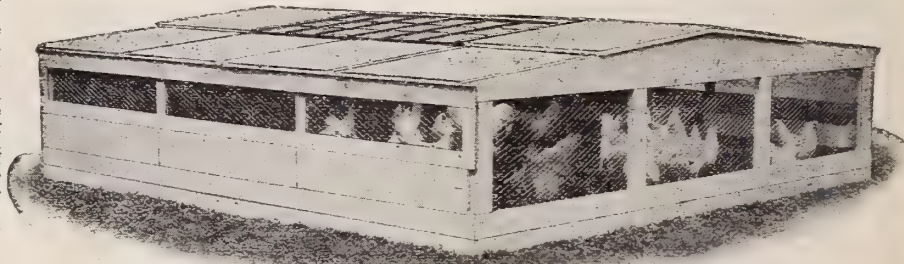

He is more than a fancier; he is a lover of the Barred Plymouth Rocks, and with his personal interest in them is bound to make more records and more progress. His winnings for the season of 1912 at the Richmond State Fair, Lynchburg and Charlottesville, read most like one of Andersen's tales; they were com-

plete in detail. At the Charlotte, N. C., great show, the annual meeting show of the American Barred Rock Club, in a great class of beauty and quality, he won cocks, 1-3; hens, 1-2-3-5; cockerels, 1; pullets, 2-4-8; pen, 2; cockerel bred hen, 1; pullet bred male, 3. The club cup for best cock, hen, cockerel, pullet and pen. Special for champion male; best colored male; association \$100 cup for best male bird in entire show, completing a record that stands strong for his line and their quality.

Mr. Hickson's mating list is free to all; it describes his matings and is illustrated with pictures of his birds and a plate of handsomely barred feathers. Get this list and write Mr. Hickson your wants. He will surely satisfy you.—H. P. Schwab.

**THE PARKWAY FARM.**

The Parkway Farm, Barton T. Fell, owner, at Trenton, N. J., makes a specialty of Silver Pencilled and Partridge Rocks, Silver Campines and S. C. Black and White Leghorns. During the past season we have seen this line at several

# The Philo Method of Housing Poultry

**J**UST as the hatching and brooding equipment of the Philo System has been brought to the highest possible efficiency, the housings for the mature birds have been worked out on the same principles of safety and comfort; cleanliness and health. Several styles and types of coops have been perfected for various ends, all adapted to the peculiar needs of the System.

With the Philo System of housing and caring for the fowls there is never the slightest objection to keeping a few hens in the best kept yards and gardens, and it is no longer an uncommon sight to see a coop or two of laying hens, and often of baby chicks, set out on a well kept lawn and often surrounded by roses and other beautiful flowers.

The Philo Adjustable Coop is the latest and most satisfactory all-round coop for small flocks and puts poultry keeping within easy reach of any family having a small plot of ground. Price of the Adjustable Coop, complete, for six hens, \$12.00.

The Utility Coop shown above is unquestionably the best coop ever built for housing growing chicks in large numbers or mature fowls in large flocks. It is 12 feet square and 3 feet high. It affords very ample accommodation for 100 chicks from two to four months old, or from 50 to 70 mature fowls. As a laying house for large flocks, no coop has ever been placed on the market to equal it. The coop fully equipped for use in the Northern states \$40 f. o. b. Elmira. As built for the South \$35.

Other Philo Equipment includes Brooder Coops, Economy Laying and Breeding Coops, Fireless Brooders, Poultry Remedies, Feeding Troughs, Drinking Fountains, and other equipment and accessories for the well conducted poultry plant. These are described and illustrated in our book "Poultry Profits by the Philo System." This book is sent free. Send for a copy today.

## Cycle Hatcher Co.

323 North Avenue, Elmira, New York

of the leading shows, where they have made a record of credit to the quality of stock bred there. At the Great Atlanta in December they won as follows: Silver Penciled Rocks—Cock, 1, 2, 3, 4, 5; hens, 1, 2, 3, 4, 5; cockerels, 1, 2, 3, 4, 5; pullets, 1, 2, 3, 4, 5; pens, 1, 2. Silver Campines—Cocks, 1; hens, 1; cockerels, 3; pullets, 3; pens, 1. Partridge Rocks—Cocks, 3; cockerels, 2; pullets, 2; pens, 1. Black Leghorns—Cocks, 1; hens, 1; cockerels, 1; pullets, 1; pens, 1; \$50 special for best display, etc. They have also been prominent winners at Allentown, Trenton, Hagerstown, etc.

Last fall we visited these farms and spent a day with Mr. Fell. His line of Silver Penciled Rocks is undoubtedly the largest and best in the country, and with Mr. John F. McKay as his manager has one of the best posted men on this beautiful variety. Their stock is very large and its grade is of the best. Campines have also been a favorite with both Mr. Fell and McKay.

In Leghorns they have a beauty flock, the best money and brains could produce. Their plant has been enlarged and in

future they hope to supply all demands for eggs and stock. Write them for particulars and rest assured of their full reliability.—H. P. Schwab.

### HIGH GRADE POULTRY HOUSES AT LOW COST.

The accompanying illustration is reproduced from a photograph of one of the popular poultry houses made by Potter & Co., Downers Grove, Ill. These houses are made in convenient close-fitting sections at the factory and are shipped with full instructions for erecting so that anyone can quickly and easily erect a complete house with all fixtures at very little cost. All joints fit closely; the material is of the best; all workmanship is carefully done and the sections are so reinforced that when set up ready for use a Potter House is substantial, wind-proof, water-tight and exceptionally convenient in arrangement.

In building these houses particular attention is given to the matter of ventilation and sunlight so that the health of

the birds is best protected. The house shown here is the biggest seller Potter & Co. make. It measures 8x20 ft., is 7 ft. high in front and 5 ft. in rear. Has partition in center. Floor in roosting room, linged windows and door, as illustrated. Also a complete Potter Henhery Outfit No. 23, suitable for 60 hens. The price of this house, painted 2 coats and delivered freight paid, is \$75. Price unpainted and freight paid of \$71.50.

At such prices one really cannot afford to bother with building his own poultry houses and fixtures. In ordering the complete house there is no carpenter to pay, no lumber wasted, none left over and no fixtures, windows, etc., to bother about. Potter & Co. print a large catalogue showing twenty-two different styles of houses; also a full line of vermin proof fixtures, feeds and supplies. This book will be mailed to any address for 20 cents in stamps, which amount will be deducted from the first order you send them. Address Potter & Co., Box —, Downer's Grove, Ill.

### THE VALUE OF GOOD BREEDING.

As a rule, each chick costs at least 5 cents to hatch, figuring it on a basis of eggs set, money invested, etc. It is not surprising, therefore, that baby chicks bring 10 cents each and upward. Such being the case it is highly important that every chick possible be raised to maturity, for the loss of ten chicks is a dollar at the very least.

These facts are being realized more and more and the demand for proper brooding equipment is rapidly increasing. It is generally conceded that hot water gives the healthiest heat and for brooding from 300 chicks upward this is best done under a system of hovers with a hot water heater and piping to carry the heat to each hover. This system was originated by the Candee Incubator & Brooder Co., Eastwood, N. Y., and they welcome all questions as to how to brood chicks. One can, therefore, feel free to take up any brooding problem with them.

### RIGHT FENCE AT RIGHT PRICE.

This is a proposition that confronts the farmer each fence building season. You no doubt have a place on your farm for a certain weight fence or some particular height, and in a great many cases you have trouble in finding just what you desire. It would not be economy for you to buy a greater height or a heavier fence than is needed, when you can get a fence for less money that will exactly meet your requirements. The Coiled Spring Fence Company of Winchester, Ind., manufactures fifty different heights and styles, and they are in a position to furnish you most any kind of a fence you may require. The company sells direct to the farmer at money-saving prices, and you should write for their catalog. Their ad appears in this issue.

### A FARMERS' SEED HOUSE.

At LaCrosse, Wis., is the center of a rich farming district where the red clover and alfalfa flourish, where the barley and oats return year in and year out bountiful yields, where field peas and seed corn furnish the dairyman abundant crops, and where forage plants, like sand vetch, Billion Dollar Grass, hog clover, give yields that gladden the heart of the farmer and fatten his purse. And in this district the John A. Salzer Seed Company have for years grown their famous pedigree seeds, which have found a home upon every wideawake farm throughout the north and central west and everywhere have increased farm yields.

This year the Salzers make a great specialty of seed oats, seed corn, seed barley, seed potatoes, field peas, sand vetch and alfalfa clover, all pedigree strains bred right up to health, quality and big yields, and their 1913 catalogue, which is gladly mailed you upon request, bristles with seed truths. Write them today.

Geo. Wolfrum, Carey, Ohio, breeder of Single Comb White Leghorns, made a grand record at the late Cleveland Show, when he won on ten entries in a class of over 130, 1st, cock; 1, 2, 5, hen; 1, cockerel; 1, pullet; 1, pen; best display and all specials. His birds all have long backs, well spread tails, fine head points and are as white as snow, to the skin. Any one desiring to improve their flock cannot do better than get into communication with Mr. Wolfrum. Look up his ad in this issue.

## 500,000 Chicks Hatched in 400 Cycle Hatchers

**W**E HATCHED this number of chickens last year in our own factory, and they were sold for \$14,500.00, and shipped to nearly every State in the Union. In addition to these, several thousand were hatched for raising in our own yards. We make Cycle machines for our own use and make large profits by using them.

When a manufacturer can make large profits by using his own goods, it is the very best guarantee that others can make money by using the same goods.

Some machines are made to sell. Ours are made to use and we use them and others who will use them can make large profits just as we do. You can start our way without having a fortune to start with. Our business has been built up without any borrowed capital.

Our chickens are hatched right and are strong; that's the reason they grow and are profitable.

While first of all we are manufacturers of incubators and poultry supplies, our manufacturing is founded upon the years of practical and successful poultry keeping experience of Mr. E. W. Philo, probably the best known practical poultryman of America.

Every article of our manufacture is the result of years of study and experiment—and must prove of actual, practical value, that will make it a profitable investment before we will offer it to the buying public.

Our experimental work is done in our own poultry yards—and here we meet almost every kind of poultry problem. We have undoubtedly had many problems similar to yours, and you are offered the benefit of our experience.

Write for a free copy of poultry book and catalogue, "Poultry Profits." It will show you new possibilities in poultry keeping, for pleasure or profit.

## Fluffy Ruffles Barred Rocks

The World's Champion Strain Continues to Win Wherever Shown

**"FLUFFY RUFFLES"**—The \$1,000 hen, and her kin have won for me and my customers more prizes at Madison Square Garden in five years than any other strain.

This record does not include Specials or winnings of my customers. No other pullet line has ever equalled this continuous win.

**"Fluffy Ruffles" Strain is Winning Now for My Customers, for Me, and Will Win for You**

I am in a position to furnish from this World's Champion Female Line choice selections of Stock or Eggs to all those wishing the best. My line of males for this season is headed by the 1st Cock at Madison Square Garden, 1911. This winning stamps him as the finest specimen of this variety in the world. For prices of the above phenomenal strains write, mentioning American Poultry Journal.

C. H. WELLES, Prop. --:-- STRATFORD, CONN.

## GOLDEN SHEAF BUFF ROCKS.

Near the thriving town of Sharonville, Ohio, a few miles from Cincinnati, lies the Neduseb Poultry Farm, where the Golden Sheaf Buff Rocks hold forth in all their beauty and quality as well as quantity. Before going any farther let us pay tribute to the name of the strain "Golden Sheaf." Could any name be more clever? The owner and proprietor of Neduseb Poultry Farm is one of the firm of Besuden Brothers (who are among our leading fanciers in their several varieties). This farm is among the very finest in Ohio. Buildings all fine and modern; in fact any practical or sensible appliance that money can buy is found on this farm. The proprietor is a man of wealth and consequently nothing but the best would suffice. This idea of the best money could buy was carried out to the very extreme in the purchase of foundation stock, as one can readily see would be the only way for a man of Mr. Besuden's caliber.

In looking over his matings one is strongly impressed by the remarkable even shade of golden buff, and this is strikingly true of hens in their second and third years. Among the pullets are the most beautiful golden buff shade I ever saw. In handling the males I found them buff to the skin and many absolutely free from any foreign color, grand in wings and head points and conforming beautifully to correct Plymouth Rock type. The whole flock was enjoying a state of perfect health, all busy singing, digging, dusting and laying. Considering the conditions under which they are raised and cared for, the eggs can but run exceedingly strong in fertility. The Neduseb Golden Sheaf Buff Plymouth Rocks made some fine winnings the past show season, as they have the previous show seasons, winning at the Ohio State Fair early last fall, and at Louisville, Ky., December, 1912: 2nd and 4th, cock; 1st and 3rd, hen; 1st and 2nd, cockerel; 3rd and 5th, pullet; 1st, old pen, and 1st, young pen. Indianapolis, Ind., 1913: \$20 silver cup for best cock, hen, cockerel and pullet. Cincinnati, 1913: 1st, 2nd, 3rd, 4th and 5th, cock; 1st, shape special, female; 2nd, 3rd, 4th and fifth, hen; 1st, shape and color special, male; 3rd, 4th and 5th, cockerel; 1st, color special, female; 2nd, 3rd, 4th and 5th, pullet; 1st, old pen; 2nd, young pen; \$25 silver cup for best display of Buff Rocks; \$40 cup for best display of any variety of Plymouth Rocks; \$50 silver cup for second best display of any variety in the show. All the matings contain a share of these winners, together with many unshown birds of like breeding and quality.

Look up ad in the American Poultry Journal and send for mating list and address Neduseb Poultry Farm, R. R. 2, Box 49, Sharonville, Ohio.—H. H. Coburn.

## A NEW TRADE MARK—WHAT IT STANDS FOR.

Readers of the poultry publications have noted the new trade mark of the Michigan Poultry Farm, at Lansing, Michigan, with perhaps passing interest, yet without stopping to consider what, if anything, it might stand for. The fact that it does stand for something and just what this is, is well worth considering.

Buyers of chicks and breeding stock throughout the country have known the Michigan Poultry Farm for years as one of the best and most satisfactory plants from which to purchase these essential products. Hundreds of customers in every section patronize the big farm, whose output is often half sold before the first of the year to advance orders. Michigan Poultry Farm has stood for highest quality, at all times—for satisfaction-guaranteed-or-money-back.

As good as it was, however, there has been found room for further improvement—for a still higher standard. And all the energy of the up-to-date superintendent, together with the resources of the already thoroughly modernized plant, have been brought to bear to reach this standard. So that this is what the new trade mark stands for—an even greater improvement.

The layout house has been increased in capacity by the addition of three more wings, each connected with the central feed building and having tracks down the middle for feed car. The completed house will care for 4,000 birds with plenty of room and ample ventilation.

Another great improvement and radical departure is in the brooding system. The Colony Brooder is now used altogether, with its increased health and vigor giving properties. These have a total capacity of 5,100 chicks, numbering seventeen in

all. They are situated in open range, on level, well drained land and afford the very greatest degree of spaciousness and air for chicks to thrive and grow to maturity without the danger of oil heated small brooders and the constant changing from one house to another.

The hot water mammoth incubating capacity has been increased from 30,000 to 60,000 eggs at one time. Sundry improvements have also been made in the cellar as to light and regulation of ventilation, until the hatching unit of the plant is as perfect as science can make it. This is as it should be, for the fame of the Michigan Poultry Farm day-old chicks rests on their vigor and strength, and these in turn depend chiefly on the manner in which they are hatched, although much is the result of careful breeding on the farm.

Michigan Farm poultry stock is, and has been for years, carefully bred for the highest laying efficiency combined with great inherent vigor. Every breeder is carefully tested throughout the year, and the pens are rigorously culled. Under intelligent handling the breed has come to be one of the very best for every desirable utility purpose, and this is another secret of the great success of the farm.

While a large trade in breeding stock is carried on, and custom hatching is done on a big scale, by far the most important feature of the business of Michigan Poultry Farm is the day-old chick. Thousands of these leave the farm daily in the height of the season, going to every part of the country. And owing to the care with which they are packed, to say nothing of the rigid inspection before being put into the boxes, they always arrive in fine condition.

The new catalogue of the Michigan Poultry Farm describes the new and improved conditions there. It gives current prices on chicks and breeders, and contains information of value to prospective customers. Every poultryman should send for a copy of this booklet—no matter whether he is in the market or not. It will save him money. It is free, and can be had by dropping a postal to Michigan Poultry Farm, Lansing, Mich.

#### THE BEST TREATMENT FOR ROUP.

It is the general belief among poultrymen that Roup has its origin in a form of catarrh which attacks fowls during the winter and early spring months.

The germs become virulent in its action as the disease progresses and the germs are rapidly spread throughout the flock by the use of a drinking fountain that has not been disinfected and by the use of a common scratch yard or feed yard.

The best method of eradicating the disease and preventing the infection from spreading is to disinfect the premises thoroughly with a reliable germ destroyer. A new non-poisonous preparation known as B-K (Bacilli-Kil) is proving very popular and effective for the purpose as it is inexpensive, easy to use and very dependable. A few drops of this powerful germ destroyer placed in the drinking water destroys the germs without causing hens to drink less or to slack up in laying.

In addition to this, coops, nests, roosts, feed troughs, etc., should be sprayed with a dilution of B-K and the trouble will rapidly disappear. B-K is a product of electricity which, while 10 times as powerful as carbolic acid, is harmless to human and animal life.

Each poultryman should keep a supply of this preparation on hand as it is not only the best remedy for roup, but is equally valuable in preventing and conquering gapes, pip, white diarrhoea and all other germ diseases. You will find B-K advertised on another page. By addressing the General Purification Co., 625 Pioneer Bldg., Madison, Wis., you can obtain a free sample of this preparation.

E. L. Miles, Sag Harbor, L. I., N. Y., the veteran breeder of Barred Plymouth Rocks, is offering eggs from exceptionally fine matings this season. He has one special mating of three extra choice pullets from which he is selling eggs at \$1 per egg. Mr. Miles' thirty-six years of experience in breeding Barred Rocks exclusively places him in a class by itself, and there is probably no breeder in this country better qualified to produce high class Barred Plymouth Rocks than is Mr. Miles. His birds have won highest winnings in the leading shows in America for the past thirty-five years. Write for his mating list and mention American Poultry Journal.

## ROSE COMB BLACK MINORCAS

Our winnings for 1913 on two entries at Madison Square Garden, 1st cockerel, 19 competing. At the Club show at Boston, on four entries, 1st cockerel, 1st pullet, 5th hen and 13 specials. Head points and low carried tails our strong points. Stock and eggs for sale. H. A. Keister, R. F. D. 3, Bangor, Mich.

## WHEN YOU WANT SOMETHING EXTRA GOOD IN WHITE ROCKS

Eggs—Day-old Chicks—Stock, our famed Crystal Strain, Eastern Champions, satisfy the hard to please. Bred from trap-nested, individually pedigreed, record layers of exceptional quality, most carefully mated; vigorous, farm reared stock. The rare combination of show points and prolific egg production. Our interesting catalog awaits your request. It's free.

## SINGLE COMB REDS.

Among Single Comb Rhode Island Red specialty breeders is found Mr. W. A. Pardonner, of Ingomar, Ohio. The writer is pleased to state that when he called on Mr. Pardonner he found his birds among the best. In looking over his matings we found some grand individuals. The whole flock run very even in rich red, with head points very fine and shape typical Rhode Island Red. We think Mr. Pardonner showed great skill in mating his pens and can vouch for good results.

With Mr. Pardonner it is quality at the expense of quantity, and as his time and quarters are limited he mated just four pens. He has some fine cockerels for sale and a few excellent breeding females. In dealing with him you are assured of getting just what you order, both in stock and eggs. His Single Comb Reds won the past show season—West Alexander, Ohio: 1st, 3rd, 4th, cockerel; 1st, 2nd, 3rd, 4th, pullet; 1st and 2nd, pen, and three silver cups. Hamilton, Ohio: 3rd, hen, and 4th, cockerel. Dayton, Ohio: 1st, hen, and 2nd, cock. Eaton: 1st, 4th, cockerel; 1st, 3rd, 4th, pullet; 1st, 2nd, hen; 1st, 2nd, cock; 1st, 2nd, 4th, pen; silver cup. Richmond, Ind.: 1st, cockerel; 1st and 2nd, pullet; 1st, hen, and 1st, pen. Piqua, Ohio: 1st, cockerel. West Milton: 2nd, cockerel; 3rd, hen, and 2nd, pen.

Send for mating list. Look up ad in this issue, and address W. A. Pardonner, Ingomar, Ohio.—H. H. Coburn.

## CHAMPION BUFF WYANDOTTE.

The writer recently visited the beautiful farm of the Besudens, which contains forty-six acres within the city limits of Cincinnati, on the Dutch Creek Road. The occasion of my visit was to see their matings, and found the quality unsurpassed. Mr. Fred Besuden has twenty Pens of "The Buffest" Buff Wyandottes, the best we ever saw corralled. The pens are all headed by prize winners and every female has a show record to her credit. The champion strain of Buff Wyandottes is the result of twenty years' painstaking and scientific line breeding and this strain without question holds the finest show record of any strain up to date, winning the past season at six of our greatest shows, viz., Chicago, Nashville, Ohio and Indiana State Fairs, Hamilton and the great Cincinnati Show, thirty prizes out of a possible thirty-two.

The ad in the March American Poultry Journal gives a detailed list of the winners heading these pens. Mr. Besuden issues a fine mating list which is yours for the asking. Address Besuden Bros., Box 359-B, Cincinnati, Ohio.—H. H. Coburn.

## KANT KLOG.

When depending on automatic feeders it is of utmost importance that these feeders work at all times, and feed fowls properly. In the past the trouble has been to keep feeders from clogging or choking up when large grain gets into the feed, thereby preventing the fowls from obtaining food. THE SIMPLICITY KANT KLOG POULTRY FEEDER has eliminated this trouble. This feeder will not choke up at any time; it is absolutely adjustable; feeds any kind of grain, either mixed or separate; feeds this in any quantity desired, and can be depended upon to feed your fowls better than you can by hand feeding.

You can leave home for days at a stretch and be assured that your birds are being properly fed. These feeders are priced from \$1.20 to \$3.50, delivered at your door by parcels post or express.

The Simplicity Baby Chick Feeder is marvelous, and a day-old chick can easily feed itself with it. For further information regarding SIMPLICITY KANT KLOG POULTRY FEEDERS address SIMPLEX SUPPLY HOUSE, PONTIACA BLDG., CHICAGO, ILL.

Chas. McClave, New London, Ohio, proprietor of the "Old Reliable" Linwood Poultry Yards, reports that he can supply the wants of every one desiring Plymouth Rocks, Wyandottes, Leghorns, Orpingtons, Rhode Island Reds, Turkeys, Waterfowls, Ornamental Birds and Scotch Collie Dogs. The Linwood Poultry Yards, was established in 1874 and therefore had over a third of a century of successful operation. The winnings made at the various shows throughout the country are too numerous to mention here, but if you will write Mr. McClave he will be pleased to furnish you with any information that you desire. In writing him mention American Poultry Journal.

First prize pen mated to produce exhibition cockerels at Madison Square Garden, New York, 1913. Owned, bred and exhibited by E. B. Thompson, Amenia, N. Y. This last 1913 record won by Mr. Thompson surpasses anything ever accomplished in Barred Plymouth Rocks at Madison Square Garden.

**PURITAN PARTRIDGE ROCK.**

Mr. C. A. Besuden has 15 fine matings of the famous Puritan Partridge Plymouth Rocks, and ten special matings, each and every pen headed by a prize winner. Their grand champion cock, "Pride of Ohio," winner of championship cup at Cincinnati, and first at Indianapolis, heads one of the pens. Breeders and judges pronounced it the most typical Partridge Rock ever shown. Among the other winners which head some of the other pens are such great birds as first Cincinnati cockerel—'13; first Louisville cockerel—December, '12; first heading first Cincinnati pen; second cock, Cincinnati; cockerel heading first Louisville pen; third Indianapolis cockerel, now a great bird. Cockerel heading second Chicago pen, cockerel sired by first Madison Square male—cockerel full brother to first Chicago cockerel. The males are mated to females who won at Chicago, Louisville, Indianapolis and Cincinnati shows, among which are: The wonderful pullet, "Chicago Queen," winner of first at Chicago, '12, and hen from first Madison Square Garden pen; the great breeding hen "Rose of Aaklyn," the greatest breeding hen in the country. Mr. Besuden will spare a limited number of eggs from

each and every pen. Orders should be booked at once. Send for beautifully illustrated mating list and mention the American Poultry Journal.

H. H. COBURN.

**WAHEBE COCHIN BANTAM.**

When we were visiting the Besuden's at Cincinnati and came to the Wahebe Bantam matings, it was hard work to tear ourselves away from them. There are 15 pens of the world's best Buffs mated, and readers of the American Poultry Journal, who have been keeping tab on their winnings, can imagine the quality. Buff to the skin, and no daylight showing under them. Black Cochins Bantams are beautiful in color and have the same heavy toe feathering. There are eight pens of blacks mated. The five pens of White Cochins Bantams are the prettiest and finest I ever saw. In the five pens of Partridge the same quality holds good; the lacing and penciling are remarkable. 28 pens of Cochins Bantams is quite a sight! The Wahebe Bantams have a great show record, and regardless of the number of pens mated, many orders are turned down. The Wahebe Cochins Bantams have won cups and specials enough to go into the wholesale business. If

you want to get in on some eggs, book now. Look up ad and send for mating lists.

H. H. COBURN.

The Sunswick Poultry Farm, South Plainfield, N. J., have just issued their new illustrated catalogue on their Single Comb Buff Orpingtons and Buff Orpington Ducks. This is a very fine book, beautifully illustrated and containing much valuable information to breeders. Any one interested in these popular breeds should send at once for a copy of this handsome catalogue and mention American Poultry Journal.

H. A. Keister, Bangor, Mich., R. F. D. No. 3, breeder of Black Minorcas, reports the following winnings the past season: On two entries at Madison Square Garden he won 1st, cockerel. At Boston on four single entries he won 1st, cockerel; 1st, pullet; 5th, hen, and thirteen specials, ninety-three in a class, this being the International Rose Comb Black Minorca Club Show.

H. W. Halbach, Waterford, Wis., has a special ad in this issue. Everyone interested in White Rocks should read this ad. This special ad is in addition to his regular ad, which will be found elsewhere.

## "TWO OF A KIND"

### TWO OPEN AIR HOVERS

### Nature AND Close-to-Nature

Bird Life Demands Open Air—Close-to-Nature Brooders Give It. Contact Warmth like the old hen. Plenty of Fresh, Open Air—No Piling Up or Overcrowding. Give chicks these things and raise every chick in flocks of 100 to 300. Hot Air or furnace heat dries out, weakens and kills. But chicks in Close-to-Nature Hovers nestle their backs against a warm body that perfectly stimulates the broody hen, and breathe temperate, pure air.

Of all the forty or more kinds of brooders, there is not one that is like the Close-to-Nature. Send for free catalog.

**CLOSE-TO NATURE COMPANY : 38 FRONT STREET : COLFAX, IOWA**

**Certificate of Sale**

January 8, 1913.

This is to certify that I have sold to Mrs. J. H. Harnly of Zion City, Illinois, my entire stock of White Orpingtons, good will, etc. Mrs. Harnly has one of the best strains of White Orpingtons in America and with the birds I sold her, which have been prominent winners at Chicago the past two years, she is able to meet the demand for show and breeding birds of the very highest class.

Signed, G. E. Greenwood.

**HARNLY'S QUALITY WHITE ORPINGTONS**

Rank well with the world's best, and have been winning at America's largest shows. It takes quality to make the winnings our birds have made at Chicago, Milwaukee, Springfield, Waukegan, Racine and Indianapolis. Clean sweep at big Milwaukee show, winning 1st and 2d cock; 1st, 2d, 3d, 4th, 5th, 6th and 7th cockerel; 1st, 3d, 4th and 5th hen, 1st, 2d, 5th and 8th pullet; 1st and 2d pen; best display; sweepstakes, grand sweepstakes and all other specials, taking more honors than any other exhibitor. At Indianapolis in the largest and hottest class in the show, won 1st, 3d and 5th pullet. Recently purchased all of G. E. Greenwood's flock of White Orpingtons, containing prominent Chicago show winners and the parent blood that produced this season's first prize Chicago cockerel. Stock and baby chicks for sale. Eggs from twenty superb matings. Fertility guaranteed. Write for mating list.

**MRS. J. H. HARNLY, 2301 Elisha, ZION CITY, ILLINOIS**

**Evidence**

We take pleasure in stating that the winnings on White Orpingtons, shown by Mrs. J. H. Harnly of Zion City, Ill., at Milwaukee, Wis., Jan. 1-5, 1913, were honors but seldom accorded breeders of this most popular variety of Orpingtons at any show. The individuals were in quality equal to the best ever met with at any show. We cheerfully recommend Mrs. Harnly and her White Orpingtons. Judge D. T. Heimlich Judge F. E. Harrison

**Eggs**

You can't lose, if you buy eggs of us. We guarantee the fertility of our eggs. Also the quality of chicks hatched from them.

**Baby Chicks**

# Rhode Island Reds

## Rose and Single Comb

We are going to guarantee the quality of chickens raised from the eggs sold by us this year.

head many of our pens.

What 20 cents will do. It will get you the finest catalog ever issued of this breed, it contains many valuable articles on raising and caring for poultry in large and small flocks, also many valuable recipes for diseases of poultry. Address.

**BUSCHMANN-PIERCE RED FARMS, Box 39, Carmel, Indiana**

## BROODING CHICKS AND GROWING GREEN FOOD.

The poultryman's chief problem is not the hatching of chicks, but the brooding of them. With proper care and ordinary common sense almost any incubator will yield a good hatch. To carry through the trying babyhood days a high percentage of the chicks delivered by the incubator—this is the real test.

The makers of the International Sanitary Hover (The International Poultry Sales Company, Brown's Mills, N. J.) claim that it will raise a higher percentage of healthy, active chicks than any other brooding device ever invented. The claim is backed up with volumes of testimony, including the tributes of Kellerstrass, Owen Farms, Wm. Cook & Sons, and Rufus Delafield. Some of the distinguishing features of the Sanitary Hover are these: It is warmer near the curtain than at the center, which prevents crowding, trampling and smothering of chicks; it can be used in any place offering shelter from wind and rain, making unneces-

sary an expensive brooder house; it is fireproof, being composed entirely of metal; it can be set up in an instant without cutting of holes or building of platforms; the lamp can be lifted out by a person standing up, which releases the operator from the disagreeable necessity of going down on his knees to his lamp.

The Sanitary Hover can be used through practically the entire year—as a hover in brooding time, as a grower of green food during the winter months. In eight days it will transform twelve quarts of oats into enough green food to feed 500 laying hens three days. In view of the importance of green food in the making of eggs, this is an item of great value. Indeed it is probably not saying too much to say that the second most trying problem of the poultry farmer has in the past been to secure a supply of green food for his hens during the winter months. In providing the key to this problem the Sanitary Hover has been rendered a great service to the poultry world.

The Pagel Poultry Supply Co., of Rockford, Ill., are a progressive firm featuring

the manufacture of poultry devices with great merit for the poultrymen. The latest addition of their inventions and manufacture is the Pagel Perfection Sanitary Chick Fountain and Feeder, being the most perfect chick fountain made. Does not spill the water when inverted, which is a great improvement on all the other fountains of a similar nature on the market. The unique appearance and the low price commend it. Price, 25 cents, postpaid. Quotations on large quantities furnished on request.

The Sandy Lick Poultry Farm, 966 Liberty Ave., Pittsburgh, Pa., have recently issued their 1913 mating list, which contains illustrations and descriptions of their breeding pens of Buff, Black and White Orpingtons. Send for a copy of this mating list and mention American Poultry Journal.

John S. Martin, Port Dover, Ont., Canada, of Regal White Wyandotte fame, informs us that his new mating list is now ready for distribution. Send for one and mention American Poultry Journal.

## LIVABLE CHICKS BABY CHICKS HATCHED RIGHT

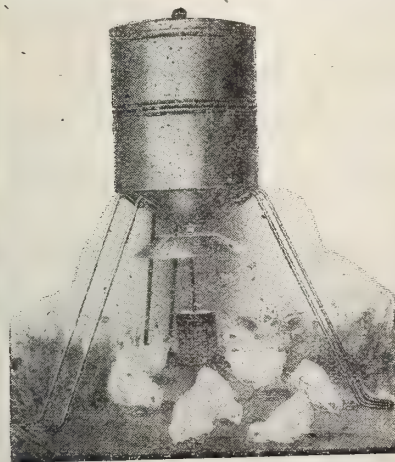

All my breeding stock are high class, bred to lay stock, reared on free range in open front houses. Every variety is carefully mated and true to name. I sell "quality chicks" at the same price you pay for ordinary stock from the following varieties: Leghorns, Single Comb White and Brown; Rhode Island Reds, Single and Rose Comb; Plymouth Rocks, Barred, White and Buff; Silver Spangled Hamburgs; English Indian Runner Ducks.

Baby chicks for Spring delivery, \$15 per 100. Eggs from above varieties, \$2 per 15, \$10 per 100. We can ship immediately. A deposit amounting to 25 per cent of order required on either eggs or stock. Better place your order today.

SIDNEY B. SPINKS, Prop. :: Geneva, Kane County, Illinois

# SAVE THE BABIES

The little fellows are the ones that demand the most of your time; they are the ones that demand care and attention the same as a small child demands care, proper food and protection from chills. It is comparatively easy to hatch a lot of little chicks, but when it comes to raising them it is a different proposition. Proper food, fresh, clean and wholesome should always be within reach of little chicks. Dirty feed is worse than none.

without effort, and it's a great pleasure to watch them busy at work filling their little crops with the fresh sanitary feed fed them by their metal mother.

**It Requires Time,** and lots of it, to feed little chicks every few hours.

**It Requires Feed,** and lots of it, when you have to throw away the dirty waste.

**It is a Pleasure,** and a big one, to feed little chicks with one of our

## Simplicity Baby Chick Feeders

All you do is to fill the hopper and let the chicks do the rest. It is better than the mother hen. It feeds them nice, clean, fresh feed whenever they want it and saves you all worry about feeding time.

**We Guarantee** that you will get more pleasure and more satisfaction out of one of our Baby Chick Feeders than you ever got out of any article of the same price. It's simply wonderful how the little fellows will work the feeder

all shipping charges are prepaid east of the Rocky Mountains.

**PRICE, DELIVERED EAST OF THE ROCKIES — \$1.25 Each \$6.00 for a Half Dozen \$11.00 a Dozen**

**Simplex Supply House Pontiac Bldg. Chicago, Ill.**

## AMERICAN DOMINIQUE.

It is a pleasure to note that there still are breeders of the old-time favorite Dominiques, who breed them true to type, color and markings. Several breeders have followed the new standard demands in markings (should we say barring?) and have introduced Barred blood, which has altogether changed the form and color.

At the late Boston show Mr. A. Q. Carter, Freeport, Me., exhibited a line of his birds that were a feature, and attracted particular and favorable attention. It was a class good to see, Mr. Carter winning cocks 1-2-3, hens 1-2-3, cockerels 2-3-4-6, pullets 1-2-3, pen 1st.

The judges and the press have spoken in the highest possible way of these birds and Secretary Alberton of the Boston show said: "The genuine old-fashioned Dominique has no equal as an all-purpose fowl."

Hardiness and general quality are the chief characteristics that have kept them all these years before the public, and promise for time to come to keep them ever a fowl of merit and value. Mr. Carter has issued a circular with much information and he will be pleased to mail this to every request; also by letter to give any and all information.—H. P. Schwab.

## IDLEWOOD.

The Idlewood Poultry Farm, Swanville, Pa., is without doubt one of the finest and most up-to-date poultry plants in the country. The management of this farm has been putting forth every effort to build up a poultry business of which they may well feel proud. They have a model plant in every respect and have spared neither money or labor to make it one of the largest and most complete.

They selected a location adapted to poultry raising. This farm consists of ninety acres, some woodland and orchards in which their chickens roam from morning until sundown during the hot summer months; thereby giving them free range and shade so essential to produce large, vigorous birds. The farm has a lake frontage of one-half mile, from which they procure sand for use in the buildings, which is a decided advantage.

Idlewood is situated near the little town of Swanville, eight miles west of Erie, Pa. Their shipping facilities cannot be surpassed, as they are located just one mile from the Lake Shore and Nickel Plate R. R., and about the same distance from the Conneaut and Erie trolley line, thus enabling them to make prompt delivery to their customers.

The variety of poultry raised on this farm consists of Single and Rose Comb Rhode Island Reds and White Orpingtons.

## ETZENSPERGER'S REDS OF QUALITY

WON AT CHICAGO, DECEMBER 12 TO 18, 1912

2d S. C. pen, fourteen pens competing; 2d cock, thirty-two birds competing; 4th pullet, thirty-eight birds competing; 5th R. C. pen, thirteen competing; 3d pullet, forty-one competing. The hottest class of Reds ever got together. All my old birds that produced these prize winners together with winners this year will be used in my breeding pens this year. My 1910 first Chicago cock bird is the same bird winning 2d this year, he producing some of my best winners, showing what blood lines will do. Also having ideal shape and color. Have a few cockerels, cocks and pullets for sale at the right price. Special sale of 50 Single and Rose Comb Rhode Island Red cockerels, good breeders; at \$3.00, \$5.00 and \$10.00 each. Mention American Poultry Journal when writing.

W. ETZENSPERGER

Box E

WILLOUGHBY, OHIO

## Golden Sheaf Buff Rocks

Won at the three following shows and all these birds and our State Fair winners will be mated in our yards this season:

Louisville, Ky., 1912—2nd, 4th cock; 1st, 3rd hen; 1st, 2nd cockerel; 3rd, 5th pullet; 1st old pen; 1st young pen.

Indianapolis, Ind., 1913—Winning \$20 silver cup for the best cock, hen, cockerel and pullet.

Cincinnati, O., 1913—1st, 2nd, 3rd, 4th and 5th cock; 1st shape special female; 2nd, 3rd, 4th and 5th hen; 1st shape and color special male; 3rd, 4th, 5th cockerel; 1st color special female; 2nd, 3rd, 4th and 5th pullet; 1st old pen; 2nd young pen; \$25 silver cup for best display of Buff Rocks; \$40 silver cup for best display of any one variety of Plymouth Rocks; \$50 silver cup for second best display of any one variety in the show. Write for our free mating list.

Box 200, AMSTERDAM, N. Y.  
(PLEASE DROP POSTAL)

and at the late Pittsburgh and Erie shows in strong competition they made the following winnings: On Single Comb Reds, 1st, 4th, 5th and 7th, cockerels; 1st and 8th, pullets; 1st, 2nd and 6th, pens; 3rd and 4th, cocks; 4th, hen; four specials for type and color. On Rose Comb Rhode Island Reds, 1st, 2nd and 3rd, pullets; 2nd and 7th, cocks; two specials for type and color. They are making a specialty of day-old chicks and have a hatching capacity of 100,000 chicks, which enables them to furnish chicks in any quantity of both fancy and utility stock.

In a recent communication received from them they informed us that at that time they had 4,000 baby chicks out, some of them weighing one pound each. They

expect to raise between thirty and forty thousand chickens this year and will be in shape to furnish the trade with the best Rhode Island Reds and White Orpingtons that money can buy. They have just issued a very neat catalogue which gives full description of their matings for this year, together with prices of eggs and baby chicks. It also contains many fine half-tone illustrations of scenes and buildings on the farm. Any further information will be gladly furnished on application to the Idlewood Poultry Farm, Swanville, Pa.

D. M. Covert, the well known breeder of Barred Plymouth Rocks, desires to let our readers know that he has moved from

Willoughby, Ohio, to Ashtabula, Ohio. His new location is on a street car line about two miles south of Ashtabula at Jefferson Road, Stop 83. He expects to keep right on improving his Highland strain of Barred Rocks and is in a position to supply your wants. Write him for full particulars and mention American Poultry Journal.

We have received a copy of "Poultry Paper Publicity," by E. J. W. Dietz, our special representative. This book contains numerous valuable suggestions to advertisers who contemplate using the American Poultry Journal. A copy will be mailed free to all advertisers who request it.

## AGAIN VICTORS

### SCRANTON'S S. C. RHODE ISLAND REDS

At LOUISVILLE, KY., against the best REDS of the South, won 1, 2, 3, 4, 5 cockerel; 2, 3, 4, 5 cock; 2, 5 hen; 2, 4, 5 pullet; 1 and 3 old pen; 1 and 3 young pen. \$75.00 Cup for Best Display in show—114 points.

Remember they made the GREATEST WIN at CHICAGO last season that has ever been made in that show by one breeder of Reds—FIVE FIRST PRIZES and ALL SPECIALS, besides many minor prizes.

At Hagerstown, Md., in October they also made a remarkable record. These, with their UNEQUALED records of past years, stamp them as the LEADING STRAIN of Reds of the present day.

Why do they win? Because they have been carefully line bred for years and have established BLOOD LINES that will REPRODUCE. My matings this season are better than ever before. If you want to know more about them send for a catalogue of matings today. It will be mailed free.

B. H. SCRANTON -- BOX 350 -- RISING SUN, INDIANA

## McClave's Linwood Poultry Farm

The home of high class prize winning Barred Plymouth Rocks, White Wyandots, Buff Orpingtons, S. C. White Leghorns, Bronze Turkeys, Indian Runner and Pekin Ducks and Geese. The finest collection of these varieties in the U. S. One of the oldest Poultry Farms in Ohio. I have 1000 head for sale of the finest quality. Single birds, pairs, trios and pens at reasonable prices. Now is the time to buy your breeding stock as the breeding season is at hand.

Eggs for hatching from selected prize matings. Leading winners the past season at Detroit, Columbus, Cleveland, Hagerstown and other large shows. At Cleveland January, 1913, my birds won 73 first, 25 second, 14 third, 12 fourth, 6 fifth prizes, 12 cups and Sweepstakes for best Pens and Displays. More prizes than the next three largest exhibitors combined. Highest quality, reasonable prices, prompt service. Write your wants to

Chas. McClave -- Box A -- New London, Ohio

## SINGLE COMB REDS.

For the past nine years Mr. Oscar Holtzapfel has watched with pleasure the improvement in his Single Comb Rhode Island Reds, which improvement is due to Mr. Holtzapfel's knowledge in mating Reds. He is known as a man with a conscience and does not believe in overrating his stock and is extremely modest in his statements in his mating list. This indeed is a most commendable characteristic, and such a man needs your patronage. His Single Comb Reds have won at Cleveland, Toledo, Ohio State Show, Columbus, Fort Wayne, Ind., and at other local shows. His matings are headed with fine males, some with show records, and contain the best birds he ever mated. Among the females are found 1st, 2nd and 3rd Toledo hens. First hen won as a pullet at Toledo, 1911, and third hen at Columbus, 1912. Third hen won fourth as pullet at Columbus. These hens have held their color so well, Mr. Holtzapfel challenges any one to pick them from pullets in same pen. His prices for eggs are very reasonable for the high quality of the stock. He also sells baby chicks.

He receives many encouraging testimonials from satisfied customers. Among them is the following from the Idlewood Poultry Farm, Swanville, Pa.:

"Dear Sir—We take pleasure in stating that of the 7,000 chickens raised this season, the 2,500 purchased of you stand in a class by themselves. For perfection in surface and under color, vigor and all-round Red quality, we heartily recommend your stock to any one requiring new blood or who is just starting in the business. While we are compelled to secure our stock from various breeders in all parts of the country, we will in the future, if compelled to restock, endeavor to purchase the baby chicks from three breeders, which will certainly include you. Should you ever be called on for reference, we will be pleased to do anything in our power to further your interests. R. J. Holliday, manager." Write for mating list.—H. H. Coburn.

Duncan Orpington Yards, Seaton, Ill., breeder of the celebrated Kellerstrass strain of Crystal White Orpingtons. They made a very enviable record in the show room during the past two seasons at

Peoria, Ill., December, 1912. They won 1, cock; 2, hen, 3, pullet; 3, pen; O. L. McCord, judge. At the Mercer Poultry and Corn Show, December, 1912, they won 1, 2, 3, cock; 1, 2, 3, hen; 1, 2, cockerel; 1, 2, 3, pullet; 1, pen; also special for best ten birds; Shaner, judge. At the Monmouth Poultry Show, January, 1913, they won 1, 2, cock; 1, 2, 3, 4, hen; 1, cockerel; 1, 2, 3, pullet; cup for best ten birds of the English class; 1, 2, pen; H. L. Bridges, judge. They have two separate farms on which the stock has free range. This season they have mated up fifty breeders, one and two years old, the pick of their entire flock. They treat every customer strictly on the square and guarantee satisfaction in every case, and always try to give more than the money's worth. Write for further particulars and mention American Poultry Journal.

In our March issue the advertisement of the Maple Grange Poultry Yards, Moorestown, N. J., did not state the variety of fowl this farm bred. They breed Barred Plymouth Rocks of the very highest quality. Look up their ad in this issue and write them for full particulars.

# ORPINGTONS!

Buff, Black, Jubilee, Rose and Single Comb White. Our new giant incubator and brooding facilities make it possible to sell one pound cockerels and pullets as cheap as others sell eggs of the same grade. We will sell one pound chicks one generation removed from CHAMPION COCKEREL OF ENGLAND and Crystal Palace winning pullet (white) (which we sold) cock that won blue at Madison Square twice, also 1st at Boston and Chicago. Buffs that won CHAMPIONSHIP of the UNITED STATES offered officially by the Buff Orpington Club, Pure Nabob Empress Blacks and R. C. Whites out of cockerel that won 1st at Kansas City, 1st Chicago and Cincinnati cocks. Such chicks as this at ONE POUND when they are absolutely out of danger and quality can be determined at from \$1 each to \$4 each means ANYONE can now own SUPERLATIVE Orpingtons. See what a fine trio we will send you for \$5 in any color.

Don't complain about paying for eggs that are not fertile when we will sell you one pound chicks of equal or better grade for the same money you pay others for eggs. Do not forget that no one ever approached our finish of type in BLACK ORPINGTONS. No one ever equalled the show record of our strain of Buffs or exceeded our record in Whites. We delivered the goods to our customers last year to win from coast to coast and from the lakes to the gulf and we NOW have BETTER chicks far enough advanced to fit you to win against ANY competition at the earliest shows. Just to find out send us \$5 for six cockerels. Day old chicks and eggs at real bargain prices for real quality. Some big bargains in breeders, too. Get my catalogue today—one colored plate. Send 10c for Orpington Magazine 1 year. Cheviot Farms, Route No. 2, Cincinnati, O.

FIRST PRIZE BLACK ORPINGTON COCK AT MADISON SQUARE GARDEN NEW YORK DEC 1911. HUGH A. ROSE WILLOW, ONTARIO.

## Rose's Black Orpingtons Champions of America

You Ask Why?—We Will Convince You

Because—We not only made a clean sweep at Madison Square a year ago, winning Grand \$25 Gold Special Best Display, but followed up this record by winning five times as many Blues with our Black Orpingtons than any other competitor at seven greatest shows in America this season.

Because—At these seven classic shows: Toronto, New York State Fair, Allentown, Hagerstown, Baltimore, Madison Square, and Boston, we captured 26 firsts out of a possible 36, also 23 seconds, 11 thirds, 8 fourths and 5 fifths.

Because—At these seven important shows, six times we won the Grand Special for Best Display; twice Cup for Best Cockerel in entire show, and once Cup Best Male in show.

Because—We have supplied winners that have won at all the leading shows including Madison Square, Baltimore and Boston.

### Wins at Boston, 1913

Our last show this season we crowned our previous victories: 1st, 2d cock; 1st, 2d hen; 1st, 5th, 6th cockerels; 1st, 2nd, 3rd pullets; 1st and 2nd pens; and all specials offered.

### EGGS EGGS EGGS EGGS

Guaranteed hatchable eggs from the choicest pens of Blacks, containing more renowned winners than any other breeding pen in the world. \$10 per 15. All unfertiles replaced free. Buff Orpingtons that won Madison Square 1912-13; 2d hen, 3d cockerel, 1st pullet, 4th pen, also 13 Blue Ribbons at above shows. Eggs \$10 per 15. Catalogue free.

**DUSTON'S WHITE WYANDOTTES.**

A copy of Arthur G. Duston's mating list is just at hand and in it we find much to comment upon. Mr. Duston as a breeder has been before the public for so many years and is so well and favorably known the world over that beyond saying he has ever been the reliable champion of the Wyandotte we will pass him up for now.

His pens as listed show the real "Duston Quality" to us, for we have paid him several visits and have been several times delighted with his quality, for it certainly is of a grand high average.

The past year was Mr. Duston's greatest year in business—not only as far as sales went but in selling real winners to his customers. Personally we know of three shows where birds bought of him to win did win, and in one case the three birds were ordered by wire four days before judging, with the result that the cockerel won first and the pullets first

and second in the largest class of the show.

Mr. Duston's success is his due. He has tried and won, and this same energy, the same desire he puts in his every deal. He tries to breed to win and to sell and win for his customers, and in all we have found him unusually successful. We hope a little later to visit him and will be pleased to tell our readers more of this line. But now get his mating list, read it over and send Mr. Duston an order. He will try, and try hard, to please you, and he can. Address Arthur G. Duston, South Framingham, Mass.—H. P. Schwab.

Guy Daily, Jeffersonville, Ind., the well known breeder of Fairview White Plymouth Rocks, has just issued his 1913 mating list. This mating list gives full description of his eighteen breeding yards that he has put together this season, from which he supplies eggs to his numerous customers. Mr. Daily guarantees all eggs to be strictly fresh and to be from

the pens from which they are ordered. He carefully tests the fertility and ships from no pens that do not show an average fertility of twelve in every fifteen eggs. If hatching is unsatisfactory and fertility below average, he will replace setting once free of charge. Mr. Daily has made an enviable reputation in the show room during the past two seasons and his stock is second to none. He is also selling baby chicks and will quote you prices on same upon application. Send for copy of his mating list today and mention American Poultry Journal.

The new catalogue of F. S. Smith, Hamilton, Ohio, the well known breeder of Single Comb Buff Leghorns, is now ready for distribution and will be sent to any one interested. Mr. Smith informs us that he is prepared to furnish thousands of day-old chicks and eggs, as he certainly has the finest flock of Buff Leghorns to be found any place. Write for catalogue and mention American Poultry Journal.

# Bean's World's Best Columbian Plymouth Rocks

Make another sensational winning at the Club's Annual Meet, Philadelphia, December, 1912, winning all firsts and all seconds except 2nd pullet and she came from my baby chicks. Again at Boston's great show, January, 1913, they make another clean-up. Is this not positive proof? 83 firsts out of a possible 85 competed for in 1911-12; 62 firsts out of a possible 63 competed for in 1912-13 and all cups and displays and shape and color ribbons. Why not start with the world's best and be satisfied? Send for free mating list before buying.

F. G. BEAN

Frank C. Cleveland, 10802 Longwood Blvd., Morgan Park, Ill.

THIRTEEN MILES FROM CHICAGO ON THE ROCK ISLAND SUBURBAN

## CHASE'S CHAMPION R. AND S. C. BLACK MINORCAS AND R. C. BROWN LEGHORNS

again prove to the poultry world their super-excellent qualities, by winning at the Great Chicago Show, in the hottest competition; 6 1sts, 7 2ds, 3 3ds, 1 4th and 3 5ths. Beyond doubt we stand head and hands above all our competitors, as we have been winning for years at the best shows in the country, also supply winners for our customers. We are offering for sale 1,000 cocks, hens, pullets, and cockerels. Some of these birds will win in the best of competition, others will make the best of breeders and layers. Remember, all stock sent on approval. You must be pleased or the deal will cost you nothing. 40 breeding pens have been mated for egg trade; therefore, we can supply them in any number. We have installed a large incubator, so your order for day old chicks can be filled for any number. All eggs guaranteed fertile. We will replace dead chicks free. We have a

### SPECIAL PROPOSITION

to offer every honest person interested in poultry. If you are going to start raising poultry, or want more stock, eggs or chicks, write me at once, as we do not require all cash with order. Our big catalog and poultry book, full of good practical poultry knowledge, sent for 5 red stamps. Price and mating list free.

Edgemont Poultry Farm : W. O. Chase, Proprietor : Box B, Hillsboro, Illinois

Silver Campines were out in great number at the recent Cleveland show. The first prize cockerel of Gensemer Bros., Creston, Ohio, an excellent specimen of the breed, was a well deserving winner, showing fine type and color. L. A. S.

Besides breeding fine Columbian Wyandottes, Mr. C. L. Patterson, of Barberton, Ohio, finds time to breed a few Silver Campines. The picture above of one of his cockerels shows how well he has succeeded in producing first class specimens of this breed.

First prize hen Pittsburg, Feb., 1913, and first prize pen cock at Canonsburg, 1912. These birds show the fine type for which Mr. W. J. Gowern's, Jr. strain is noted. He has furnished the winners for many large shows and is now booking orders for eggs for hatching. His mating list describing in detail his many fine pens is free and can be had for the asking. W. J. Gowern, Jr., Canonsburg, Pa. L. A. S.

### DUNE ALPIN POULTRY FARM, EAST HAMPTON, N. Y.

In looking over the past season's records we note with particular interest the winnings made by the Dune Alpin S. C. White Leghorns at several of the leading exhibits, such as The Hagerstown Fair, The Grand Central Palace New York Show, and Boston's big beauty show, etc. At these exhibits we find they won in total of sixty-one regular and twenty special prizes as follows: Sixteen first prizes, eleven seconds, fifteen thirds, seven fourths, five fifths, five sixths and two sevenths.

The specials include shape and color prizes for both males and females and two sweepstake specials and display specials.

We well know that these awards were won in the best of classes, as we made all those shows. Competition in the Leghorns has become fierce at the great shows and it positively takes the very best to win. The Dun Alpin Leghorns are in this class and have been winning for years. At our visits to this farm last spring we were royally entertained for a whole day looking over their matings and stock. It is a line of great worth.

Mr. George J. Kerr, the manager, has brought this line right to the front and besides has won fame as a conditioner. Their birds are always just right, and such condition is sure to tell.

Their catalogue is just at hand and gives much information of their line and is a book of value. Sent free for the asking.—H. P. Schwab.

### WM. COOK & SONS' ORPINGTONS.

We greatly regret that in our write-up of several shows we neglected to give the winnings of Wm. Cook & Sons, Scotch Plains, N. J., proper mention, and in fact in some cases gave them no mention at all. This line, as our readers well know, is one of the foremost in the world and their winnings during the past season surpass those made in all former years. They have shown their birds the country over and have nailed their "Banner of Quality" on the records of the world's greatest exhibits in a way fitting their worth.

At the New York Grand Central Palace Show, December, 1912, with but four birds shown, they won: Black Orpington cockerels, first and third; White Orpington cockerels, second and third, all in quality classes.

They were showing two full lines elsewhere at the same time. We expect shortly to visit their plant and to tell our readers of the Cook Orpingtons as they are at home.

Mr. P. A. Cook has been a very busy man this season with all his exhibiting and in filling many judging engagements. We worked with him at Charlotte, N. C., where his work gave the best of satisfaction, and where at the banquet his address was a feature. Mr. Cook has made poultry his life's work and we consider him an authority worth following.—H. P. Schwab.

### THE H. W. JOHNS-MANVILLE CO. HOLDS ANNUAL SALESMEN'S CONVENTIONS.

Following a long-established custom, the 600 or more salesmen, as well as the department managers, of the H. W. Johns-Manville Co. assembled in annual convention on various dates from January 2 to February 8, at Milwaukee, Boston, New York, Philadelphia, Pittsburgh, Cleveland, Chicago, St. Louis, New Orleans, San Francisco and Toronto, to learn more about the products which they sell.

One by one about three hundred products of this concern, such as J-M asbestos roofing, shingles, packings, pipe coverings, brake linings, conduit, waterproofing materials, mastic, cold storage insulation, electrical supplies, etc., were taken up and their advantages over competitive products pointed out to the salesmen by specialists in each line.

A week's time was devoted to each of these conventions, with a banquet at the close as a fitting ending.

### I. A. ENGLE'S WHITE LEGHORNS.

Mr. I. A. Engle, Latham, Ill., is one of the most progressive breeders of White Leghorns in America. We have seen his stock and found that he has the birds, and his dealings are always on the square. Mr. Engle has issued a 24-page catalogue which is full of timely hints. It should be in the hands of every reader of the American Poultry Journal. It is free for the asking.

## MOUND HILL POULTRY FARM.

S. D. Hall, of Seville, Ohio, owns and personally manages the Mound Hill Poultry Farm. Mr. Hall is one of the largest breeders of the popular Silver and Golden Campines in America. He is an old Single Comb White Leghorn breeder. He has spared no expense to procure the best Campines obtainable and has imported both stock and eggs. Heading his Silver Campine pens is an imported cockerel weighing five pounds and barred finely in all sections. He is a true Campine in shape and carries a beautiful fan-shaped tail at an angle of 45 degrees. Heading another pen is the first Cleveland cockerel, January 6-12, 1913. This bird weighs better than five pounds and has a pure white hackle and a five-point comb. Mated to these birds are such females as second and fourth Cleveland pullets and others with fine long backs and fan tails and barred in all sections. It would be hard to equal these matings, to say nothing of beating them. Mr. Hall imported the best eggs from Rev. Jones' Golden Campines and has the best yet produced. Golden Campines are more scarce than the Silvers and Mr. Hall will spare only a few settings from them. In all he has about 150 Campines mated. His White Leghorn matings are fine. He does a nice baby chick business on all three varieties. His farm is located in Seville, about five minutes' walk from the Baltimore & Ohio depot and about the same distance from the stop of the Cleveland & Southwestern electric line. Send for his mating list and mention American Poultry Journal.—H. H. Coburn.

## BARGAINS IN BOOKS.

On page 631 of this issue will be found a list of some of the most valuable Breed Books that have yet been published. Every raiser of poultry should own a copy of the book treating of his favorite breed. Books on other important subjects are included in the list.

You get a special combination rate by ordering with a subscription, but the books may be secured without the subscription if preferred.

Robt. D. Parmenter, who for a number of years has been located at Knoxville, Ill., where he has been breeding high class Single Comb White Leghorns, recently sold all his high class stock to Walter E. Flanders, Orchard Lake, Mich., and accepted the position as manager of Flanders' White Leghorn Farm at Orchard Lake, Mich. This poultry farm covers about thirty-five acres and is one of the finest and best equipped plants in the country, and Mr. Flanders is to be congratulated on securing the services of Mr. Parmenter to manage his plant, as Mr. Parmenter is well qualified for this position and is an expert breeder and will no doubt succeed in producing some very high class specimens this coming season. Mr. Parmenter desires to thank all his customers for their liberal patronage in the past and assures his old customers and all those who desire stock and eggs, either exhibition or utility, that he is now in a position to fill all orders in a satisfactory and prompt manner. The Flanders' White Leghorn Farm have recently issued an up-to-date catalogue and mating list which will be sent free upon request. Address Flanders' White Leghorn Farm, Robt. D. Parmenter, manager, Orchard Lake, Mich.

Welding by electricity has long been successfully established as the only process to perfectly amalgamate two metals into one. You have hardly a tool or piece of machinery on your farm but that is electrically welded where there is a juncture of metals. The present state of perfection of garden and barnyard tools, mowers, reapers, binders, threshers, cultivators, kitchen utensils, dairy machinery, edge tools, chains, automobile engines and steering gears, bottoms of oil cans, frames of bicycles, etc., is made possible through electric welding. The same process produces "Pittsburgh Perfect" electrically welded wire fencing, which is a solid, one-piece fabric enjoying many distinctive advantages, among them being the ease with which it is strung, the great tension to which it can be stretched because of the absolute elimination of "long" and "short" line wires, the smooth surface making the wire-cuts impossible, and the neat appearance of the fence. Modern methods of manufacture in many lines have been greatly benefited by the discovery and practice of welding by electricity.

FIRST PRIZE EXHIBITION PEN. MADISON SQUARE GARDEN. NEW YORK. Dec 31. 1912 - Jan. 4 - 1913  
FOR THE FIFTH CONSECUTIVE TIME Bred and Owned by MONMOUTH POULTRY FARMS. FRENEAU, N.J. U.S.A.

**F. A. POERTNER, BEREA, OHIO.**

In our report of the Cleveland Show we fear we in error overlooked Mr. Poertner's display of his well known line of "Wingold" Buff Orpingtons. This season he did not exhibit his Wyandottes here and gave all his time to his Buff Orpingtons, winning with them in a class of 100 birds: Cock, 5th; pullet, 5th, and pen, 1st, with specials. It was a beauty class with some of the best American and English birds competing for honors, making one of the strongest classes out this year.

Both this line and Mr. Poertner have been known to our readers for some years. Their winnings are of the best and they well deserve the best the breeders can give them. His circular and information on application. Write him today.—H. P. Schwab.

The Lake View Poultry Farm is now located at Deerfield, Ill., on a farm consisting of 17 acres, where you will find some of the finest Rhode Island Reds in the country. Every pen is headed by a prize

winner. Eggs, \$10 per 15. They also breed S. C. White Leghorns, which are high class in color, heavy type, and bred for egg production. Every bird in their twelve pens is up to standard weight or better. Their price for eggs is \$3 per 15. Send for egg circular, addressing Lake View Poultry Farm, Deerfield, Ill.

One of the largest pure bred poultry farms in the country is owned in connection with the factories of the Mankato Incubator Co. at Mankato, Minn. This means that the incubators and brooders made by this concern are put to the most thorough, practical tests before they are placed in the hands of buyers. Incubators and brooders marketed on this plan are no longer experiments, but the result of experience. There is nothing uncertain as to what they will do. They must prove their worth in actual operation on the company's own farm before they are turned over to purchasers. Twenty years of poultry success are back of Mankato incubators and brooders. The mistakes have been made, and overcome. The strong points have been discovered, and proved. Demonstrations that were a

part of the company's own poultry experiences have established the worth of each feature, and this twentieth anniversary year is showing a marked and deserved increase over any other year in the concern's history. It is safe to say that the points which have made "Mankato" profitable for the practical poultrymen who manufacture it will prove profitable for others, whether they be skilled in poultry raising or mere beginners. A fine catalog telling why Mankato has succeeded, and what it will do for others, is sent to anyone who asks for it.

The Progressive Incubator overcomes the ill effects of outside changes of temperature because it has hundreds of extra air cells in addition to the usual dead air space found in other makes. These hundreds of extra air cells make a perfectly protected egg chamber and insure large hatches. Their brooder also calls for your attention as it is hot water heated, large and roomy. The price for both is only \$9.85. If interested in poultry you should write to the Progressive Incubator Co., Box 135, Racine, Wis., for their free book.

## KAUP, QUALITY BUFF ORPINGTONS

are described in my new 1913 36-page catalog-mating list just out. ## WHITE AND PARTRIDGE PLYMOUTH ROCKS

Chicago, Milwaukee, Racine 1913 Winners.

We have mated 12 pens of White Rocks and 6 pens of Partridge Rocks for the egg trade. Every pen is carefully selected and will produce birds of type and quality that will satisfy the most fastidious breeder. Remember that the prizes our birds won were won in the strongest competition at Chicago, against such breeders as Owen Farms and Guy Daily. I still have several splendid bargains in Partridge Rocks and Golden Laced Wyandotte Cockerels. Send 3 red stamps for our handsome new catalog just off the press. It will convince you that we have the goods and sell them at living prices.

**PETER OLLE -- R. F. D. 4, BOX 110 -- RACINE, WISCONSIN**

## JACOBUS IMPROVED SILVER CAMPINES GOLDEN

ORIGINAL INTRODUCER OF THE IMPROVED INTO AMERICA—At Madison Square Garden, New York, I won \$50.00 sterling silver cup, January, 1912, and also January, 1913, for best display American bred Silver Campines.

My birds laid white eggs that won first prize at Boston, 1910, 1911, 1912 and 1913. Competition open to the world, and eggs of all breeds. Consider carefully and start right.

**M. R. JACOBUS, Box 3-J Ridgfield, New Jersey**

## BLUE ORPINGTONS : SILVER CAMPINES

Max de Bathe, the originator and introducer into America of the celebrated Blue Orpington, can supply eggs from his best pen at \$15 a setting; utility, \$2.50 a setting. At Madison Square Garden Show, New York, 1911, with this variety I won 1st and 2nd cockerel, 1st, 3rd and 4th pullet. Last year I judged at the Garden so could not exhibit, but a large number of the winners were bred from pens I shipped or from my eggs. A few real high class birds left, from \$15.00 upwards. Silver Campine eggs, Show, New York, 1912, were birds got from pen I shipped them \$10.00 setting and \$5.00. The Ridge Egg Farm winnings at Palace last year. I won 3rd cockerel, 5th pullet at Madison Square Garden Show, and put down a display pen, the grandest ever seen in America and which brought the record price for this variety. I can supply 1,000 Campines ready for shipment in October. Place your orders now and get the best.

**Max de Bathe -- Hartley Court -- Reading, England**

## 20th Century Dual Purpose Fowl

MONMOUTH S. C. BUFF AND WHITE LEGHORNS. We have perfected in our strain the long sought for result, exhibition and utility combined. Champions of the South, practically sweeping the decks in both varieties at Atlanta, Ga., December, 1912, also winning 1st pen Madison Square, New York, 1912-13, for the 5th year in succession in Buff Leghorns our only entry, places the MONMOUTH STRAIN in a class by itself. Our Buffs and Whites are producing wonderful results on many egg farms the country over, and reports from Argentine Republic and other foreign countries, who breed the MONMOUTH STRAIN, are most flattering, which substantiates our claim that we have perfected in our strain the DUAL FOWL. Why hesitate and experiment when a tried and true article is within your reach? Join the ranks of Monmouth Customers and tread the path of success. Years of experience are back of our matings this season. They are not problematical but assured facts. Our past records speak emphatically for our ability in this line. Send for our beautiful 1913 Catalog and Mating List which gives full description and prices of our matings and stock. Always address,

Thomas Lockwood, Supt.

# ORIGIN AND HISTORY OF BUTTERCUP FOWLS.

**SICILIAN BUTTERCUPS**, as the name implies, were first found native of the island of Sicily, Italy, and hence they are classed as Mediterranean.

The origin of the breed dates back so far that it is shrouded in obscurity, they having been kept, possibly for ages, by the peasants of their native land for eggs and meat, with apparently no attempt to breed them to

the entire crew and fared well, and thus won the regard of captain and crew through unobtrusive worth, precisely as they have ever since done wherever they have been placed; for it is a very noticeable fact that whenever and wherever they are taken up they win their way to the final displacement of all competitors.

Mr. Loring, above referred to, is one of our well-known, old-time poultrymen. I quote the following from one of his recent letters:

"I am the original introducer and

from Messina, Sicily, but it took two years to find a cock and hen of my type, and mine are a type, and few of them exist in Sicily. Most of the native fowls there are varied greatly in feathering.

"In 1865 I was bringing out the Barred Rocks; then later Dark Brahmas; then originated and brought out the Silver Penciled Wyandottes and Partridge Wyandottes.

"I also imported 'Silver Braekels' from the grass district of Belgium and 'Silver Campines' from the pine woods district of Belgium, but do not like them and have discontinued both, as I found the Buttercups FAR SUPERIOR.

"In 1894 I first began to put out the 'Sicilians,' and I then added the word 'Buttercup.' See Year Book of the U. S. Department of Agriculture, Bureau of Animal Industry, for 1905. They there published the report of my breeding, etc.

"The speckled breasts and neck on Buttercups is wrong and not of the true type. With kind treatment Buttercups become companions like a dog or a cat."

So much for the origin and history of Buttercups. Whatever popularity they gained during succeeding years, until very recently, was made entirely upon intrinsic merit; upon their record as remarkable egg layers, which spread from mouth to mouth. To the above I add the following from the writings of Mr. H. W. Dewey, president of the American Buttercup Club:

"A little later John B. Gough, the great temperance advocate, obtained a trio of the breed, and still later, Rev. A. B. Browne, at the time a student in college, was presented with a trio.

"Fortunately, these early importations either remained or became the property of owners who were interested in keeping the breed pure, and thus a foundation for the establishment of this greatest of laying breeds was laid in America.

"The great and ever-increasing demand for Buttercup fowls is a surprise to many poultrymen, especially to those who have come to depend upon extensive advertising to boom their favorites. The little hen from Sicily has surely come to the front, and she has come by way of always and everywhere making good. Her fame rests on a most enduring foundation. Briefly stated, Buttercups are easy keepers, good foragers, very hardy, mature early, are as quiet and domestic as Wyandottes or Rocks, a little above the Leghorn in size, and wonderful layers of large white eggs.

"When I first became interested in Buttercup fowls there was no Buttercup organization, and no Standard of Perfection. On inquiry I learned that unsuccessful attempts at organization had been made, but difficulties in the way had discouraged final effort. My small flock was laying steadily. And every egg my birds gave me seemed an appeal to do something to safeguard the purity of the breed. I found that I could depend upon a number of willing helpers, and the work of organization was undertaken. As a result we now have the American Buttercup Club and a recognized Standard of Perfection. In testimony of appreciation of my efforts to bring an efficient organization into being, I was elected president of the club, and associated with me as officers were men and women eminently

First prize S. C. Brown Leghorn cock at Madison Square Garden, N. Y., and Philadelphia. Bred and owned by Frank Schellang, R. D. 8, Erie, Pa. This bird is considered, by all the leading judges, the best S. C. Brown Leghorn male bird ever produced.

feather or uniformity of type in coloring, although their peculiarity of comb and greenish colored shanks have long been maintained.

So far as I can learn, their original introduction into this country was first described by Carroll C. Loring, of Massachusetts, who gave the story, so oft since repeated, of old Cephas Dawes, the New England sea captain, who more than fifty years ago brought to Boston from Sicily a cargo of raisins, oranges and figs. When his cargo was made up and he was ready to sail he was attracted by a coop of fowls offered in the market, and thinking to occasionally have a treat of fresh meat while on his journey home, he purchased them and took them on board.

Captain Dawes soon noticed in them their "usual habit" of laying eggs, and they laid so continuously and well, large white eggs, with very firm shells and rich delicate flavor, and as they were of a specially gentle, quiet disposition, they soon became the pets of

breeder of Buttercups in this country. I have spent fifty-three years of my life in the scientific breeding of pure-blooded poultry; have originated several standard varieties; am original introducer in the United States of Barred Plymouth Rocks, with Mr. Upham, in 1865; of Orpingtons, as exhibited at Music Hall, Boston, in 1888; and of Sicily Buttercups, or 'Good Luck Fowls,' the dearest, cozy, profitable, success-bringing of any fowl, in 1860.

"Sicily Buttercups are handsome, attractive, endearing fowls to every woman and money-makers for man. They are very tame, docile pets, somewhat larger than Leghorns. They bring success, comfort and profit to all who keep them. They were first brought from the island of Sicily by Captain Dawes, in the bark 'Fruiterer'; our farms joined and I first obtained them from him. I have always found them tremendous layers of large-sized white eggs; very hardy, and splendid broilers. I have since received a new importation

**THE MOST POPULAR FOWL today is U. R. Fishel's White Ply. Rocks**

qualified for the performance of the duties of their positions."

In deciding a winner in every close competition I find the bird in the very pink of condition stands the strongest show of winning, as first impressions are hard to overcome, and a bird that shows all he is to advantage will win over a better bird that appears to a disadvantage. Brilliancy of plumage, together with harmony of color in all sections, is the strongest winning feature any male can have, while in females that velvety bloom, where you can't see where one feather leaves off and another begins, decides at first glance where the blue will hang. Depth of under color generally meets with strong consideration by all judges, and slight tinge of smut should not be cut hard.

The American Buttercup Club has grown to a membership of 250 within the first year of its existence.

Factoryville, Pa.

#### INDIAN RUNNER DUCK CULTURE.

THE raising of pure-bred poultry has of late years grown into one of the most profitable and agreeable pursuits of which any one can engage. There is no better investment than the Indian Runner duck at the present time.

The demand for strictly first-class birds exceeds the supply and it is a mistaken idea to begin with low-grade fowls and endeavor to improve the flock. The best are by far the most profitable and the cheapest in the end, as much time is saved and it is possible to get the benefit of the years of labor and study the reliable breeder has spent in improving the stock.

The best way is to begin with a few fowls and let them make more capital by multiplication of individuals. Or secure settings of eggs from a reliable breeder. In doing either way one invests less capital to risk at the start, learns more every month and gets his birds in a successful manner.

I have had the pleasure of starting a goodly number of persons who have begun in this manner to raise Runners, and in nearly every case where there

was interest and business methods in poultry used, there was success beyond expectation. In fact, I started in this way and have certainly had no cause for regret.

The poultry business of today might be summed up in an egg-shell. In other words, it is the fowl that produces the greatest number of eggs at the least cost that wins out. The incomes from poultry may be divided in three classes: eggs, meat and fancy. And the Indian Runner duck meets the requirements of these three classes. They are persistent layers, laying nearly every day the year round, except during moult, with proper care. Not only one year but several. The eggs are of the very best quality and are superior to hens' eggs for staple and fancy edible use. Are much larger, and a brisk demand has been created for them in the city markets at an advance of several cents more per dozen than hen eggs.

Runners are very hardy, and it is surprising the number that may be cared for in a small yard, with so little time, trouble or expense. Are not bothered with contagious diseases; not infested with lice or other vermin; no scaly legs or frosted combs; require no water only for drinking purposes, and will thrive on any kind of land in any locality. The houses need not be costly or especially built for warmth, but should be dry. Ducks begin laying when very young, mature rapidly and are full fledged egg machines ere one realizes it. Eggs from well mated birds hatch well, ducklings are strong and vigorous; grow like weeds, and are ready for market in eight to ten weeks. What other bird can pay for itself quicker? As fowls for meat, owing to their quick growth, fine meat and little trouble to raise, they are a decided success.

There is a steady demand for fancy show birds, for Indian Runner ducks catch the eye of every poultry fancier with their lovely plumage, distinctive type and erect carriage, and an overwhelming demand for eggs for hatching purposes at attractive prices. Taking everything into consideration, there is no other fowl that affords a greater profit for the time, experience and out-

lay of capital than the Indian Runner. From their many good points advantageous to profits, appealing as it does to the people of city, town and country in a business way, there are vast opportunities. A few of them will make a living and a flock of them will start a bank account, or pay off the mortgage on the farm. We are in receipt of numerous letters in regard to them and always stand ready to give all desired information or help in any way we can. They have been so interesting and such money makers for us, I do not hesitate to say they can be for you, for Indian Runner ducks lay, win and pay.

Marian Holt.

Savannah, Mo.

#### BUTTERCUPS.

FOR the benefit of my Sicilian Buttercup breeding stock and to find out all I could about the breed of birds I have made this trip through the island of Sicily.

I have bred the Buttercup for several years at my home, Mountain View Poultry Farm, Painesville, Ohio, and as I am a great lover of this bird I have spared nothing in looking into their ancestors and their native country.

The Sicilian people are a strange lot of people and have some very queer ways about them. Most of them live in large stone houses which hold many families. They have no yards or lawns, but their doors are out even with the sidewalk. They have a court on the inside of the house which they use as a barnyard for their goats and donkeys, or sometimes they have it filled with palms. There is no chicken coop at all to be found except a small crate, which averages 2½ feet wide by 3 to 4 feet long and 3 feet high. This crate is made entirely of slats with nothing over to serve as a roof, as this crate is taken into the house at night to keep it from being stolen. There are no nests in the crate, as there is hardly room enough for the chickens themselves. The hen when she wants to lay goes into the house and uses the bed, table or any handy place as a nest. In one house I saw a hen laying on a pillow on the bed and another in a clothes basket at the foot of the bed, so you can see that the people are very kind to their chickens. All the food that they get they pick up in the street or under the table. This is the reason that the Buttercup is so easily tamed, as their ancestors simply have lived with the people. The hotel that I am writing this letter in has about 20 of these chickens and they are all around under the table while you are eating like a cat or a dog, and they are no more afraid than either. You can pick them up at will.

Now as to the kinds of chickens these people breed I defy any American breeder to tell, as I have seen a bigger mixture than I ever supposed existed. In all my travels over this island I have found only one man who raised poultry as a business, and I wish some of the American breeders could see his farm. He had Black Leghorns, Black Langshans, Buff Cochins, Brahmas and several other kinds, and not one was perfect or anywhere near. He had them all mixed up and thought they would breed good birds.

## CHICK INSURANCE

Would you like to have the lives of your baby chicks insured? Very well, then use a Simplicity Can't Clog Baby Chick Feeder. It always works and is always on the job. Simplex Supply House, Pontiac Bldg., Chicago

**THE MOST POPULAR FOWL today is U. R. Fishel's White Ply. Rocks**

His Barred Rocks had legs of all colors and some resembled the Brahma with feathers on the legs. So you see the idea that this country has of breeding for good birds. I defy any American to find a flock of birds in this country that will not show or resemble every known breed. I never could imagine such mixtures myself.

Now as to the Buttercup type. I have found some fine specimens, but never more than one to a flock. They are all mixed and you can find a cup crest on any kind you wish.

I landed at Palermo and went south to Catania, then on to Messina. At Palermo there were many to be found with the buttercup comb, but the farther south I went I found less, till at Catania I could scarcely find any at all. In Messina I found many more, and so you see they are along the north coast.

Many of the anxious breeders of America have written to the American consul, Hernando De Soto, at Palermo, and have stirred him to think that there must be a great breed of chickens in this island, but he tells me the same as I have told you—they are badly mixed and hard to get. Mr. Frederic Trear, of Salem, N. Y., being the only man that received any birds from Mr. De Soto. Mr. De Soto found a man by the name of Eugenio Rienzi who went out and found some of the birds and finally landed six birds. He did not find any two in the same pen, so you see it took many days of hard searching to get these six.

I went and had a talk with Renzi, with the aid of one of Mr. De Soto's men, and found that he did not know of any more of these birds and that he did not care to look for any more. The people in this country do not believe in anything like the poultry business. Mr. C. C. Groff, of Inglewood, Cal., and John R. Kemery, of Downingtown, Pa., also wrote to Mr. De Soto for birds, but after getting the price he heard no more from them.

No one but myself, who, having made the trip, can appreciate the trouble that Mr. De Soto has been to in trying to find these birds for the many people who have written to him, as it is next to impossible to locate them.

This trip has convinced me that I have some of the best birds that can be had and by careful mating I intend to still improve this breed.

It is fast becoming a most popular breed and I think that all of the American breeders were unable to supply the demand for birds this last season.

Yours truly,

Franklin S. Fifield.

Painesville, Ohio.

#### A COURSE IN POULTRY RAISING.

A class in poultry raising, as one phase of practical agriculture, has been organized in the North Platte (Neb.) high school. Superintendent Wilson Tout, of the city schools, has charge of this class, which has been limited to twenty members and is now full. The course of study for this class has been worked out by Mr. Tout from all available sources and from his own experience. No attempt will be made to go into the subject from the big commercial standpoint, but an attempt will be made to teach the principles and show the practices which will give better results on the farm and at the

city home, where poultry raising is only one of the industries.

The course will include a study of egg and meat production and the growing of well-bred and fancy fowls. It is intended to make it inspirational to a large degree, in the belief that enthusiasm for a subject is the surest means of getting the most out of it and making the most of it. Principles of breeding, causes and treatment of poultry diseases, planning of buildings and grounds, natural and artificial incubation, types, breeds and varieties of fowls, and the results of recent experiments in these and kindred subjects will be given. A study will be made of the relation of markets, prices and the preparation and marketing of live and dressed poultry and eggs.

Models of poultry coops, yards and fittings will be demonstrated. Standard breeds of fowls will be brought into the class room and studied. Modern devices, as the trap nest, sanitary roosts, automatic fountains, leg bands, egg packing boxes, etc., will be studied and investigated.

The intention is to make the course practical, but it is realized that there are limitations beyond which it will not pay to go. Every student enrolled, takes the course because he or she

wants it and sees that it is part of the present tendency to make education more practical and more in touch with the working world.

Harry A. Muntz, Elgin, Ill., breeder of high quality S. C. White Leghorns, made some grand winnings the past season. At Springfield, Ill., State Fair he won 1, 2, 3, pullet; 2, 4, cockerel. At Chicago, 2, cock. At Elgin he won silver cup for best display in mediterranean class and \$25 in gold for most qualified. Write him for what you want and mention American Poultry Journal.

Carl D. McCarthy, Kempton, Ind., breeder of Rhode Island Whites exclusively, has just issued a very neat catalogue about his farm and birds. This catalogue will be sent free to readers of American Poultry Journal. If you are interested in this breed send for one today.

**WHITE WYANDOTTES**  
Best quality Cocks, Cockerels, Hens and Pullets of the best breeding, size, shape and color. Every one right. Eggs, \$1 and \$2 per 15. \$5 and \$10 per 100. Correspondence invited. Satisfaction guaranteed. M. W. Grigg, Bu hnell, Ill. 3-1

## Lakenvelders

A fowl of rare beauty and real merit. Eggs from three matings at \$5.00, \$3.50 and \$2.50 per 15. Express prepaid. Circular. Mention A. P. J. when writing.

J. E. Johnson :: Slater, Iowa

## F. L. Poultry Farm Rhode Island Reds

Winings at Cincinnati, January 23 to 29: Single Comb—Cocks 2-3, hens 2-3, cockerel 6, pullet 5, pens 1-3. Rose Comb—Cocks 1-2-3, hen 2d, cockerels 2-4-5, pullets 1-3, no pens entered. Club silver cup best display Single Comb. Shape and color special Rose Comb male. Shape and color special Rose Comb female. \$5.00 gold champion female. We have some birds for sale that will improve any strain. Give us a trial and be convinced. Mating list now ready. F. L. Ober, R. F. D. 1, Verona, Pennsylvania

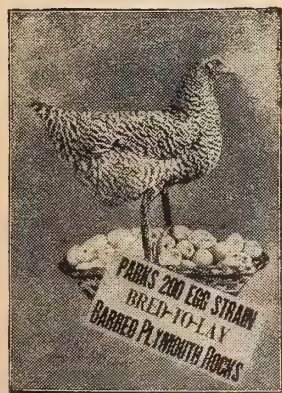

## PORTABLE POULTRY HOUSES AND BROODERS

DYER PORTABLE HOUSE & MFG. CO.  
4430 N. 40th AVENUE : CHICAGO, ILLINOIS

Our houses are well built of first class material and painted two coats of lead and oil. Send for free catalogue, orders filled on short notice. Mention American Poultry Journal.

## PARKS' Bred-to-Lay BARRED PLYMOUTH ROCKS

Is the strain you will evidently eventually breed. The strain that layed their way into universal popularity and are holding it by making good in hundreds of customers' hands.

They represent over 20 years of careful selection and trapnesting for eggs, as well as being kept close to the standard requirements, as my 1913 winnings show:

Chicago, Wash. Hghts., Jan. 27-30—1, 5, pullet; 2, 4, cockerel; 2, 5, cock. Pittsburgh, Jan. 13-17—4th pen. Altoona, Jan. 20-25—1, 2, 3, 4, hens; 1, 2, 5, cocks; 1, 4, cockerels; 2d pullet, 1st cockerel and pullet pen. 110 Barred Rocks in class.

**EGGS:** Selected, 15, \$5; 30, \$8; 50, \$11; 100, \$20  
Incubator, 15, \$2; 50, \$6; 100, \$10

EGGS BY PARCEL POST IF WANTED

Parcel Post leaflet "The Mail Route to Poultrydom" sent Free. Large 36-page catalog or chick circular upon request.

J. W. Parks, Box R, Altoona, Pa.

**Mr. E. B. THOMPSON A CANDIDATE  
FOR PRESIDENT OF THE  
AMERICAN POULTRY  
ASSOCIATION.**

Amenia, N. Y., March 15, 1913.  
To the Members of the American Poul-  
try Association:

At the request of breeders and

friends from every section of the coun-  
try I have finally consented to accept  
the nomination as a candidate for pres-  
ident of the American Poultry Associa-  
tion.

I do not crave for office, but I do  
feel that there are times when one must  
consider the wishes and the general  
welfare of the breeders and the indus-  
try at large above their own personal

desires, and bow willingly to the de-  
mands made upon them.

If elected I will owe the office to  
the members of the association. I have  
made no promises and do not intend to  
make any beyond these, viz.: That I  
will assume office and give it my every  
attention and all the time required for  
its proper fulfillment. That all matters  
for my consideration will receive im-  
partial and just action as I see and  
understand them. That I will freely  
use every power given me to properly  
fulfill my duties and will labor unceas-  
ingly for the welfare and general suc-  
cess of the great poultry interests and  
the American Poultry Association.

Let me urge upon every member  
that they should deem it a duty and a  
privilege to vote. They owe it as a  
duty to themselves and the American  
Poultry Association to fill out their  
ballot and return it to the election  
commissioner promptly.

I would respectfully ask for the mem-  
bers' support.

Fraternally yours,

E. B. Thompson.

**ANNOUNCEMENT FOR THE KAN-  
SAS CITY POULTRY SHOW.**

Our next poultry, pigeon and pet  
stock show will be held December 8 to  
13, 1913, inclusive. We have leased the  
whole of Convention hall, which will  
give us 80,000 feet of floor space in  
one of the best halls in the United  
States. Kansas City is the second rail-  
road center in the world, and a good  
show town, our shows are always well  
attended by the public. Our show last  
year was a success. The business done  
by exhibitors in selling stock and tak-  
ing orders for eggs equalled any show  
in America. Poultry journals did a  
large business in taking subscriptions  
and making contracts for advertise-  
ments. Exhibitors of incubators, poul-  
try appliances and supplies did a suc-  
cessful business.

Our entry fee (\$1) is the lowest and  
our cash premium (\$5) is the highest  
of any winter show in the country; we  
also have a large number of valuable  
special prizes. Official catalogue will  
be printed as soon as judging is com-  
pleted, giving the names, addresses and  
winnings of all exhibitors. We give  
free space and the liberty of the show  
room to the poultry press, and they  
will, in return, print full account of the  
show, thereby giving the winnings to  
the public in the January issue, thus  
giving the exhibitor full benefit of  
their winnings at an early date. The  
show is not given for the benefit of  
the promoters, but for the benefit of the  
exhibitors, and to put Kansas City on  
the map, as giving one of the best  
winter shows in the country. Exhibit  
with us. E. L. Noyes, Secretary.

726 Main street, Kansas City, Mo.

John L. Brown, Anderson, Ind., the well  
known breeder of Single Comb Black Mi-  
norcas, reports the following winnings at  
the Anderson, Ind., show recently. He  
entered ten birds and won eleven ribbons  
and cups, besides numerous special prizes.  
He has mated up several choice pens for  
the egg trade this season and can guar-  
antee satisfaction. Write him at once for  
prices and particulars.

Mr. Stahl has also equipped his incubator  
with a visible thermometer at top of ma-  
chine, always in plain sight, a lamp entirely  
enclosed which cannot be filled when lighted  
and a number of new and novel features to  
be found in no other incubator. It will  
certainly pay you to send and get a copy of  
Mr. Stahl's catalog.

**Whatglen Magnificent Black Minorcas**

The World's Largest Minorca Farm. Eggs, \$3 and \$5 per setting. 50 cockerels for sale, \$5 each.  
We aim to please, and always do.

Whatglen Farm : Frank McGrann, Proprietor : Box A, Lancaster, Pennsylvania

**Cretaceous White Wyandottes**

The sky is the limit of their quality. Eggs—Eggs—Eggs. Clean sweep at the big shows.  
First pen Cleveland, O. All firsts Wellington, O. Silver cup for best display Wyandottes.  
Silver cup and specials for best pen in American class. Mating list.

W. R. SHEPARD : BOX A : WELLINGTON, OHIO

**MAWER'S R. C. REDS**

Pen I headed by 1st Cleveland cock, also winner shape and color specials. Won last year  
as cockerel at Chicago, Cincinnati and Cleveland. Eggs, \$8 per 15. Pen II headed by  
"Governor," 1st Cleveland '12. Also winner of two specials for shape and color. Headed  
4th Chicago pen last Dec. Eggs, \$5 per 15. Pen III headed by "Pres. Taft," sire of all my  
finest winners. Eggs, \$3 per 15. The females in these pens are grand type and rich red.  
Order direct from this ad. The supply is limited.

ROBERT MAWER, PERRYSBURG, OHIO

**SILVER AND GOLDEN CAMPINES  
AND S. C. WHITE LEGHORNS**

Baby chicks of quality from these celebrated strains of heavy layers of large white eggs. I make  
no extravagant and unsubstantiated egg record claims; each year our chicks are bred from birds  
whose performance is measured by their egg yield, having thus earned a reputation in heavy egg  
production. At Cleveland, January, 1913, our Silver Campines have shown by their win-  
nings (two firsts, one second, one fourth, one fifth, on an entry of six) that utility and show  
values can rest in the same birds. Now is the time to book your order for either baby chicks  
or eggs for early delivery. Our prices are right and we guarantee to please. Catalogue free.

S. D. Hall : Box 78 : Seville, Ohio

**Only Live Chicks Count**

It is not the number of chicks hatched, but the number raised, that  
makes a poultry farm profitable. Chicks trampled to death or smothered in  
the brooding represent loss.

**International**

**SANITARY HOVER**

The only hover that is warmer near the curtain than  
at the center. This, by causing the chicks to distribute  
themselves near the edge of the curtain, prevents crowding  
and assures plenty of fresh air.

The Sanitary Hover can be picked up and carried around  
with ease and used anywhere. No carpenter work is required  
to set it up. It is fireproof, unbreakable, absolutely reliable.

More sales are being made of Sanitary Hovers than of any  
other two makes combined. Sixty per cent. of the Sanitary  
Hovers sold are replacing other brooding devices. If you are  
going to raise chicks this spring, you owe to them to investi-  
gate the results achieved with the Sanitary Hover.

Indorsed by Kellerstrass, Owen Farms, Wm. Cook  
& Sons, and America's leading poultrymen generally.  
The concerns named are breeders of the highest priced  
birds in the country. Every chick entrusted to a  
hover by them represents from \$10 to \$100 in value.  
They use the Sanitary Hover because they know it  
can be depended on.

Write for booklet containing a full description of the  
one perfect brooding device—the Sanitary Hover.

INTERNATIONAL POULTRY SALES CO.,  
Box 511, Brown's Mills, N. J.

# Associations and Shows

*Secretaries are Requested to Send in News Items of Interest About Their Shows for This Department*

## TROY, ALA.

Pike County Poultry Association members of the American Association will hold their annual show in connection with the Pike County fair, November 3 to 8. Mrs. Florence Forbes, Decatur, Ala., will judge.

The association is making preparations to coop fifteen hundred birds, and handsome cash prizes will be offered as well as specials. Call attention to the poultry fraternity that the South, and especially this section, is one of the best points for the sale of thoroughbred poultry and stock, and it would be well for the breeders to make an exhibit or display.—J. A. Henderson, Secretary Poultry Department, Troy, Ala.

## THE MODESTO, CAL., SHOW.

The Stanislaus Poultry Association of Modesto, Cal., held one of the finest shows in California this season. Between 900 and 1,000 birds were shown and to say the least the exhibitors were a live bunch.

The show compared well with the best class of shows in the East. A fine building and uniform crating was furnished by the association.

The state of California this year held 19 or 20 exclusive poultry shows, besides all the poultry shows in connection with the fall fairs. I am sure this is about three times the number that was held four years ago. In the next four years I think the number of shows will double. The competition in most all the varieties was pretty keen.

There were 101 S. C. White Leghorns, good quality all of them. The first cockerel won the Mediterranean special cup and was a beauty that had a fine concave standard back and tail.

Forty-one S. C. Brown Leghorns were shown. They had good Leghorn carriage, exceptionally good stripe in cockerels.

Seventy-two S. C. R. I. Reds were on hand. They were a good lot, but were not conditioned as well as some of the other classes.

S. C. Black Minorcas, 65 birds, and there was quality to burn. There were a number of big fine birds that would get in the real money if shown at shows like St. Louis and Chicago.

Anconas and Andalusians were up to their usual standard; some of the Anconas were a little too dark.

Silver and White Wyandottes about equal in number. The competition was not so close as in other varieties.

Seventy-two Barred Rocks made a fine showing and many fine birds did not get a place owing to such a fine lot; exceptionally fine coloring in cockerels.

White Rocks, forty-eight birds in number, made a fine display, and the quality was good throughout, and a number of birds were good enough to

win anywhere. First cockerel won special for best bird in American class.

White and Buff Orpingtons about 40 birds each and were an even bunch.

Other smaller classes were good, such as Partridge Rocks, Buff Leghorns, Silver Spangled Hamburgs, Columbia Wyandottes, Langshans, Bantams, Pekin and Runner ducks.

The association gave 17 cups and de-

## THE POULTRYMEN AT SARATOGA SPRINGS WAKE UP.

The poultrymen of Saratoga Springs, N. Y., have awakened to the fact that they have in their immediate vicinity some of the best birds in this country as well as a great many prominent poultrymen, so have organized a poultry association and elected the follow-

FIRST PRIZE PULLET BRED COCKEREL. PHILADELPHIA, DEC., 1912.

Here is shown by Mr. C. N. Myers, Hanover, Pa., a picture of his first prize pullet-bred Barred Plymouth Rock cockerel at the Philadelphia show, Dec., 1912. A bird of exceptional beauty and value. At Philadelphia he attracted special attention with his close, bright and snappy barring and ideal form. This line is famous for their females and this season have won at New York, Philadelphia, Hagerstown, etc. Mr. Myers winning first prize hen at the late great Garden show. H. P. Schwab.

serves much credit for the liberal cash prizes. E. C. Nichols, Modesto, Cal., is the secretary. J. D. Yates of Modesto and R. V. Moore of Oakland judged the show, both having judged at Modesto last year. All efforts will be put forth to hold even a better show next season.

This San Joaquin valley is a fine place for poultry. An irrigation system and good soil produces plenty of green vegetables, alfalfa and grain.

ing officers: W. H. Manning, president; H. A. Eddy, treasurer, and J. H. Eddy, secretary.

The association has decided on December 2-6, 1913, as dates for their annual show and are offering very liberal cash and special prizes, several silver cups having already been donated. Specialty clubs are invited to hold their annual meeting with them, very flattering inducements being offered.

A course of poultry lectures will be given during the year by prominent poultry lecturers, both on the utility and fancy branches of the industry.

The members of the association are full of enthusiasm, as is shown by the attendance at the meetings this winter, many of which have been held under the most adverse weather conditions, and every member is putting his shoulder to the wheel, not only to make the show a success but the association as well.

Any information desired regarding the association will be cheerfully given by addressing the secretary, care of the Saratoga Poultry and Pet Stock Association, Saratoga Springs, N. Y.

#### IMPORTANT CHANGE IN ALLENTOWN FUTURITY RULES.

Owing to a great deal of dissatisfaction with the rule requiring that seamless, enameled bands be shipped on the legs of all birds entered, at the age of from two to three months old, that feature will be abandoned in the coming great poultry futurity championships and in its place will be substituted the plan of last year that all birds proposed to be shown must arrive at Allentown wearing "Futurity," sealed and numbered, leg bands furnished by the association about ten days before the show. One band will be furnished each entry. The winners will be required to make

affidavit, month bird was hatched, where raised and by whom, thus fully safeguarding everyone.

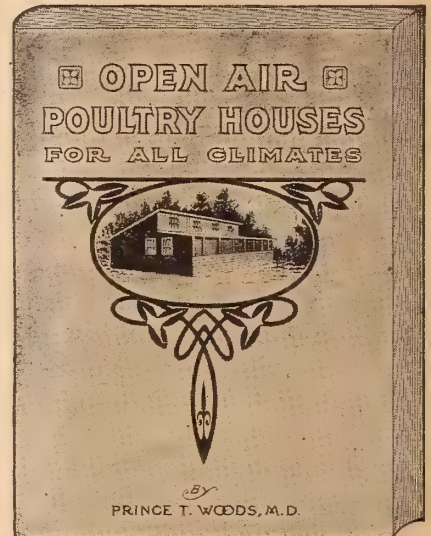

On account of this change in rules, the closing of final entries in all varieties will be moved on to May 1st, 1913. And public notice is hereby given to those who may already have entered that, due to this change of rules, they can withdraw same and that failure to do so will be construed as evidence that they agree to change.

It has been hoped that the English plan of "ringing" promising youngsters with enameled, seamless and untamperable and unremovable bands could be introduced on this side of the Atlantic and that same would prove

# OPEN-AIR POULTRY HOUSES FOR ALL CLIMATES

*By Dr. Prince T. Woods*  
America's Leading Authority on Practical Poultry Keeping

The best house book ever published. Now ready for delivery. Be sure to read it before you build or make alterations in your poultry houses. Just out. 88 pages, 46 illustrations and 5½x8 inches in size.

A WELL WRITTEN, WELL PRINTED, WELL BOUND (in cloth)—a REAL BOOK, not a pamphlet or catalog. Just what you are looking for if you want to be successful with poultry. All NEW. Special illustrations from pen drawings and from actual photographs of construction work. Plainly worded. Easily understood. Tells plainly how to build and what to build so that anyone at all used to handling tools can build a good practical open-front poultry house.

#### The Three Best "Fresh-Air" Poultry Houses

Tells how to build the kind of houses that the most successful breeders all over the country are building and recommending. Government workers favor these open-air houses. The "Fresh-air House" has come to stay and you will want to build one. It means Better Fowls, Freedom from Disease in the Flocks, Better Egg Yield, Better Fertility, Better Chicks.

#### No Matter Where You Live, If You Keep Poultry You Need This Book

There are nine chapters and every one of them full of live interest and helpful information. Just look over the table of contents:

Chapter I—**Sunlight and Fresh Air.** Importance of pure open air both day and night for all domestic poultry. Relation of sunlight and fresh air to health and vitality. Nature's best aid in the prevention of disease.

Chapter II—**Why Use Open-Front Houses.** A few more reasons why you should use open-front open-air houses for the comfort and well being of your fowls as well as the betterment of your profits.

Chapter III—**Hints and Helps on Building.** Tools and amount of experience required. Materials. Suggestions for saving cost, floors, frame, eaves; shingles or roofing. Portable or permanent buildings. Foundations.

Chapter IV—**Location of Poultry Houses.** Land. How to face the building. Relation to surrounding country. Prevailing winds and wind breaks. Continuous or colony buildings. Yards.

Chapter V—**Dr. P. T. Woods' Improved Open-Air Poultry House.** New descriptive photographic illustrations showing how to build and actual construction of house built to illustrate this

book and now being successfully used to winter 100 valuable White Plymouth Rock breeders. Dimensions of buildings. Suggestions for building on colony or continuous plan. Building instructions and list of material required for house to be boarded in, up and down.

Chapter VI—**Another Plan for Dr. Woods' House.** Line drawings showing plans and detail of frame. House to be boarded horizontally. How to build. List of material required. Complete building PLANS.

Chapter VII—**The Gillette Open-Air House.** The house used in the International Laying Competition. Description, plans and list of material required.

Chapter VIII—**H. H. Stoddard's Open-Air Cage Roost.** A protected outdoor roost for fowls in warm or hot, dry climates where no houses are needed. Diagrams showing two types of cage roosts. Night quarters which help solve the stickfast flea problem and afford greater comfort for fowls in tropical and semi-tropical climates. Rain tight roof may be provided where frequent heavy rains prevail.

Chapter IX—**The Tolman House.** Brief description and some views of this pioneer among modern "fresh-air" houses.

#### Does This Mean Anything to You? Greater Comfort for Your Fowls, Better Fowls, Better Returns, Bigger Profits

If it does appeal to you, then you want this book on Open-Air Houses. If it does not appeal to you, better read it and find out what others are winning success with. Fresh-air methods have helped others to become successful and make bigger profits. WHY NOT YOU?

Price of "Open-Air Poultry Houses for All Climates," 75c Postpaid. With American Poultry Journal, One Year, \$1.40. Remember Cloth Bound, 9 Chapters, Profusely Illustrated, on High Grade Paper, Only 75c. Canadian Subscription and Book, \$1.65; Foreign, \$1.90

American Poultry Journal Pub. Co., 542 So. Dearborn St., Chicago, Illinois

an especially valuable feature in the futurities.

But it seems breeders of many varieties, notably Barred Rocks, Rhode Island Reds, etc., feel sure they cannot select their best birds with any degree of satisfaction or certainty when small and hence their strenuous objections to the plan. Others seemed to feel that entrants might send the bands issued them to others to use on birds they were raising and that the affidavit plan of 1912 was much the better plan. And really there was no reason to change from said plan as it worked beautifully and to the satisfaction of all, only except for the reason given.

The 1913 Allentown show, September 23-26, will easily be the best yet. There will be several new features, probably an enlargement of the already large and tempting prize moneys and in every way this show will live up to its slogan "Noted for the way it does things and the things it does."

Therefore anyone having any early hatched and promising chicks will do well to consider the advisability of entering these futurities. They were a great success last year and will be an annual feature at Allentown hereafter. The management of the Panama-Pacific International Exposition Show, San Francisco, 1915, have already announced that they also will have championship poultry futurities.

For printed matter and entry blanks Great Allentown Fair, 1913, Championship Poultry Futurities address W. Theo. Wittman, Supt. Allentown, Pa.

#### PRIZES FOR LAYING TYPES AND BEEF TYPES OF POULTRY.

Probably for the first time in the history of poultry culture in America a poultry show will this coming season offer prizes on laying types and beef types of poultry.

This highly commendable move will be made by the Great Allentown Fair Poultry Show under the management of W. Theo. Wittman and the prize moneys that will be offered will be very large—probably double the prizes paid in regular classes.

Great and painstaking attention will be paid to the selection of the judge to pass on these new classes as his decisions will probably pave the way for what will in the future be the accepted types for laying and for killing chickens. Breed, variety or color are to cut no figure and owners of birds in the laying contest will be allowed, if they wish or can do so, to file statements showing number of eggs laid in period stated.

The winners in the beef type will be publicly killed and dressed within twenty-four hours after the awards are up so that the judge can more definitely show a good killing type of chicken. There will be two classes—one for yellow skinned and one for white skinned.

Entry fee will be same as in other classes—\$1 per bird. Prizes: \$8, first; \$4, second, with probably a third if the entries are as large as anticipated.

It is hoped that this competition will arouse a lot of interest and make at least a start in setting an egg type and a beef type.

Fuller particulars in premium list ready about July 1, 1913. Applications can be filed already by addressing W. Theo. Wittman, Allentown, Pa.

#### A STRONG BUFF ORPINGTON EXHIBIT.

The Illinois branch of the National S. C. Buff Orpington Club held their annual show in connection with the Peoria show December 3-7, 1912. A hot class of 260 Buffs faced Judge McCord. Of this number over 200 were owned by club members. The comparison system was used in placing the awards. The club elected the following officers for 1913: President, R. Willis James, Bradford; vice-president, C. C. Miller,

ficers elected: President, F. G. Bean, Collegeville, Pa.; vice-presidents, Dr. E. B. Kaple, Elbridge, N. Y.; F. L. Platt, Toledo, Ohio; Howard M. Munroe, Lexington, Mass.; secretary-treasurer, D. Monroe Green, Waterville, N. Y. An elaborate new club book has just been issued by the organization. It is printed on heavy enameled paper with beautifully embossed imitation alligator skin cover. Contains an abundance of valuable articles and other information concerning Columbian Plymouth Rocks, together with original

Bloomington; secretary-treasurer, A. B. Porter, LaSalle. The membership in this club keeps increasing and each year brings out a larger and stronger exhibit. A winning at this show cannot help but be of value to the exhibitor.

#### THE AMERICAN COLUMBIAN PLYMOUTH ROCK CLUB.

The regular annual meeting of the American Columbian Plymouth Rock Club was held at Philadelphia, Pa., in connection with the Philadelphia show, at which time the regular club business was transacted, various important matters discussed and the following of-

lifelike illustrations of prize winning specimens. Every person interested in Plymouth Rocks of any variety should read this book. It was issued at a heavy expense, but a copy will be sent free to anyone upon receipt of 10 cents to cover packing and postage. Send for one today. Address D. Monroe Green, Secretary, Waterville, N. Y.

Nearly every reader of this publication is interested in incubators and the improvements in artificial incubation. About as clever a device as we have had our attention called to is the Automatic Egg Turner on the Excelsior Machine, manufactured by George H. Stahl, 212 Elm street, Quincy, Ill. The eggs are turned without removing them from the machine. A slide is propelled backward and forward, turning every egg.

## NOTICE.

The nineteenth annual meeting of the American Black Minorca Club was held during the poultry show at Baltimore, Md., on January 1, 1913. It was one of the most enthusiastic and best attended meetings in the history of the

club and many important matters were discussed and some changes made in the by-laws. One new ruling was adopted, providing for election of officers by a postal vote, similar to the method employed by the A. P. A., and one provides against the election of more than one officer or director from

any one state or province.

The secretary invites all Minorca breeders to write him for further information and he desires to correspond with poultry association secretaries regarding the special ribbons the club will donate to any show.—Marcus Allen Northup, Secretary-Treasurer, Orangeburg, N. Y.

## "THE LUCKY SEVENTH."

The seventh annual show of the Empire Poultry Association will be held in the Palace, New York City, December 2-6, 1913.

We will tell you why it will be "the Lucky Seventh" later.—L. D. Howell, Secretary, Mineola, N. Y.

Freeport, Ill., March 18. 1913.

Gentleman:

The poultry breeders of Freeport and vicinity have organized a poultry and pet stock association for the purpose of increasing the interest in fancy poultry and to hold an annual poultry and pet stock show.

The first show will be held at the Odd Fellows' Temple from December 15th to 20th, 1913, and as liberal prizes, cups, etc., will be awarded and as our show dates do not conflict with the show dates of the surrounding towns we expect a large entry in every class.

Anyone wishing to become a member of this association can do so by sending \$1, the annual membership fee, to the secretary, Paul Wurtzel.

## ROSE COMB WHITE ORPINGTON BREEDERS, ATTENTION!

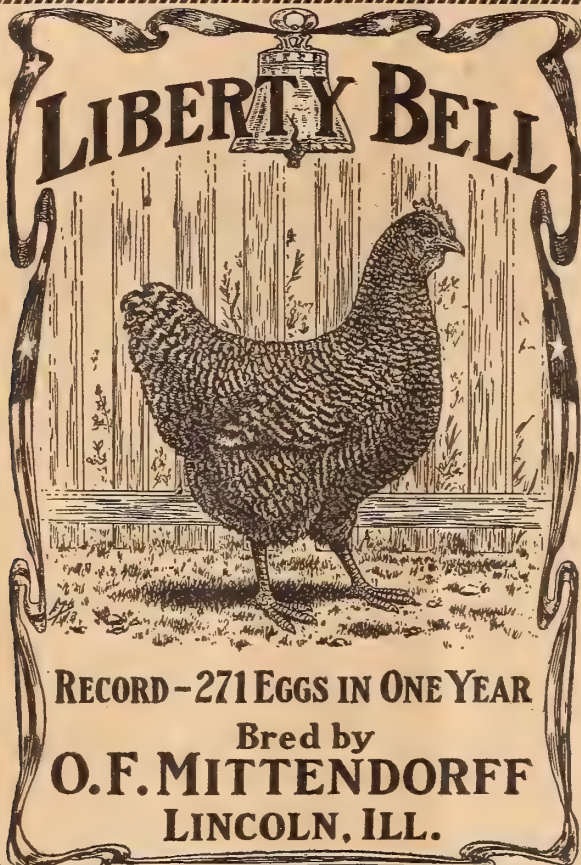

Secretary Cambell assures us that so soon as the club has 100 members the variety will be admitted to the Standard.

Every fancier of the variety is urged to join the club at once, as the first catalogue goes to press at once and should contain every possible name. The dues are \$1 per year and must be sent to the secretary, Milton W. Brown, Station L, Cincinnati, Ohio.

The splendid showing of the R. C. Whites at Madison Square and other important shows has convinced the skeptical this year that the Rose Comb Whites are now fully as far advanced as the Single Combs, both as respects color type and size.

Those who do not breed the R. C. Whites are invited to send stamp for copy of the new catalogue, ready very soon.

The Bunker Hill Poultry Farm at Mankato, Minn., is owned by R. F. Neubert. This well known poultry expert is engaged in more than the manufacture of Triumph incubators and brooders. His output includes poultry foods and supplies of all kinds, while his activities embrace the actual breeding of the finest birds. In other words, here is an incubator manufacturer who is actually engaged in the general poultry business, knowing poultry requirements, skilled in the finer points of the industry and backed by real, practical experience. In 1893 the Bunker Hill "farm" was one small chicken house and a very limited piece of real estate. Today it is an immense poultry show in itself—a credit to the skill and energy of its founder. Mr. Neubert's friends declare that the success of Triumph incubators and brooders is natural, because it is built on such knowledge and experience. And thousands have come to know that the machines which hatch and protect fowls like the ones from Bunker Hill Farm are profitable either for the professional poultryman or the amateur. "Neubert," "Bunker Hill" and "Triumph" appear to be permanently linked as signifying poultry success. A catalog describing and illustrating this interesting business is sent on request.

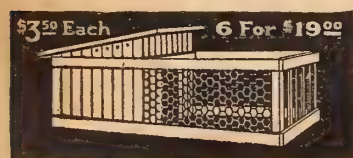

## GREENAN'S WHITE WYANDOTTES

At Pt. Huron, 1913—America's Quality Show.—Won everything in sight, first and second cock; first hen; first cockerel 1911-1912-1913; first pen 1913; best display 1912-1913. Send for my mating list and see who has the winning kind. Fine breeding males, \$5.00 to \$10.00. Book your egg orders now. Please mention A. P. J. J. B. GREENAN DECKERVILLE, MICHIGAN

## Tompkins' Rhode Island Reds Both... Combs

Better now than ever before. Hundreds of high-class breeding birds at reasonable prices. Write us before ordering elsewhere. Eggs from high class pens.

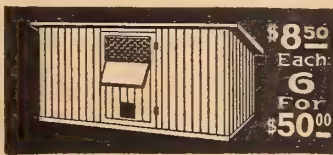

Concord Poultry Yards, Harold Tompkins, Prop., Concord, Massachusetts

SANITARY brood coop for hen and chicks. 2 feet square with 3-ft. covered wire runway; made of red cypress, painted two coats. A fine setting and brood coop at low cost. Order 6 and save freight.

## FREIGHT PAID

On Orders for Six or More East of Rockies

SANITARY colony roosting coop for 50 growing chicks, 3x6 feet, 3 feet high; vermin proof. Fresh air front. Complete with 2 perches and floor. Made of red cypress. Worth \$1 more. Try 6 and be satisfied.

## Before You Build or Buy

Get Our Big New Catalog — See How Much You Save by buying Potters Portable Factory-made Fresh-air Houses; coops, feed hoppers, fountains, vermin proof roosting and nesting fixtures, etc.—everything for poultry owners, highest grade and cheaper than you can make at home.

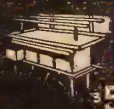

## Ten Years' Experience

Houses made of matched Red Cypress flooring. Painted 2 coats. Every house set up and fitted perfectly at our factory. Shipped to you in convenient sections. Price for 26-Hen House complete with roosting and nesting fixtures, \$22. Twenty other sizes and styles to select from. Lowest prices. Book full of good ideas for poultry keepers. Mailed for 2 Red Stamps. Write today. Potter & Company, Box 121, Downers Grove, Ill.

## GET POTTER'S CATALOG

SAVE MONEY ON HOUSES AND FIXTURES

### THE RHODE ISLAND WHITE CLUB OF AMERICA

Has its second annual year book ready to mail. The club now has 156 members, representing 36 states and Canada. This book contains many items of interest to Rhode Island White breeders and each one should possess a copy. It is free to all members of the club. Non-members may obtain a copy by sending 10 cents to cover cost of mailing, to the secretary. Or, better, send \$1.00 for membership fee and dues to November 1, 1913, and receive the book free.

For further information and application blanks write the secretary, Mrs. C. M. Vertrees, Cecilia, Ky.

### AMERICAN BUCKEYE CLUB ISSUES NEW CLUB CATALOGUE.

The American Buckeye Club has just issued a new club catalogue with full information about the breed, its history, breeding, etc. The articles on breeding by Mrs. Mettie Metcalf, the originator of the breed, are especially valuable and written in charming style. The book, which is illustrated, will be sent postpaid to any address on receipt of four cents in stamps by any member of the club or the undersigned.—A. H. Weisberg, Secretary-Treasurer, Nevada, Mo.

The National Columbian Wyandotte Club has just issued its fifth annual catalogue and it is a book that will prove very interesting and helpful to all Columbian Wyandotte breeders.

The catalogue contains 80 pages printed on the best of paper to show up the halftone illustrations and text. It has, besides the list of officers and members, many valuable articles by prominent fanciers, a full report of the annual meeting and list of awards of all club special prizes at last season's shows. Mr. D. Lincoln Orr, of Orr's Mills, N. Y., is the new president, taking the place of Mr. W. G. Fenton, who resigned.

The club has published its new and copyrighted Club Standard for Columbian Wyandottes. These are for members only.

The catalogue is free upon request. Address National Columbian Wyandotte Club, Ralph Woodward, secretary-treasurer, Grafton, Mass.

Pittsburg, Pa., 2-6-13.

Hancock Inoculum Co., Inc.,  
Salem, Va.

Gentlemen: We are in receipt of your favor of the 4th inst., acknowledging receipt of our order given your Mr. McNickle for fifty gross of OCULUM to be shipped at once.

We note your remarks in regard to results expected from our territory, and in reply will state that we have been handling OCULUM now for more than a year, and although we have always put it out on your "MONEY REFUNDED IF NOT SATISFACTORY" plan we have not been called upon to refund for a single bottle on the account of unsatisfactory results.

On the other hand we have received so many repeat orders and unsolicited testimonials from practical poultry men, that we are forced to the conclusion that OCULUM used according to directions will in every instance do what you claim for it. With this past record plus the assistance that you are so kindly rendering us, we will miss our guess if we are not in the market for more goods within the next thirty days.

Wishing you success and assuring you of our hearty co-operation, we are,

Respectfully yours,  
THE I. W. SCOTT CO.,  
Per R. H. S., Pres.

The Aristocrats of the  
Poultry World

A typical 7-pound Yama Minorca female from an untouched photograph. Note the long back and depth of body and all egg-laying characteristics.

## Yama Single Comb Black Minorcas

WE believe there have never been put together twelve better pens of Minorcas. Every one is headed by prize-winning males—and one of the best judges of Minorcas wrote us on February 17: "I would like to show six of your Minorca cocks against any six in the country."

**Of the 51 cockerels and pullets we have exhibited this Winter at four shows, 42 were placed and EVERY ONE WAS BRED AT YAMA FARMS.**

Eggs for hatching from these pens, \$10 a setting.

Utility Minorca eggs for setting, from brothers and sisters of these selected pens, \$3 a setting, \$15 a hundred.

At Madison Square Garden, N. Y., December 30 to January 4, 1913, Yama Farms won on S. C. Black Minorcas, first, third and fifth cocks; first, fourth and fifth cockerels; first, fourth and fifth pullets; third hen; first and fourth pens; four firsts out of a possible five.

At the last Madison Square Garden Show, we had more Barred Plymouth Rocks placed than any other breeder. There IS no better pullet-mating line than we have to-day and our cockerel matings are headed by such great birds as Cock Robin, the first cockerel and championship male at Buffalo, January 1913.

See from our catalogue and show records the kind of Barred Rocks we are breeding. We know the full pedigree of every bird in our pens and have given much care and attention to these matings.

Eggs for hatching from pens Nos. 16 to 22, \$10 a setting, as they run. Eggs, \$1 each if all from one pen.

Utility Barred Rock eggs, \$3 a setting, \$15 a hundred.

Send for our catalogue illustrated from untouched photographs, also our 1913 mating list.

**YAMA FARMS**  
Napanoch, Ulster County, New York

Newton Cosh, Manager Poultry Department

### PARTRIDGE PLYMOUTH ROCKS.

As Seen by Louis A. Stahmer at F. N. Perkins' Yards, Freeport, Ill.

Environment, climate and the handling affect the color, character and shape of every breed of fowls. Variations in climatic conditions in America are not so great that the effects are noted to any extent in the color of the breed, but environment and handling affect the characters of fowls very quickly and will be noted at a glance when visiting different breeders. For instance, visit a breeder who does not pay much attention to his flock, feeds them irregularly, and throws rocks or anything handy in order to make them go out of his way, and you will find that his birds will rapidly lose the original shape of the breed on account of having to be constantly on the lookout dodging rocks or other missiles. It makes them nervous, retards egg production and in time this habit will become fixed, and if the flock continues to be bred in line, will be transmitted to the offspring. On the other hand you will find the best colored and shaped birds in the yards of the breeder who feeds regularly and treats them kindly. We formed an opinion about Mr. Perkins' stock the moment we saw him and his beautiful house, surrounded by acres of as choice land as can be found in Illinois. Our opinion was confirmed when we saw his Partridge Rocks. Shape makes the breed, color the variety and according to the superiority of these two qualifications the judges award the prizes at the poultry shows. When Mr. Perkins started many years ago with Partridge Plymouth Rocks he set the highest standard for those two desired qualifications and as price was not considered when he made his purchase of the original foundation stock he naturally got the very best to be had in the country. The result of this is plainly visible to the observer when looking at the birds on the Perkins Farms. His fowls having been bred strictly in line, show the same general shape and color throughout the whole flock. That Mr. Perkins' ideas regarding the desired standard, shape and color is pretty nearly correct is proven by hundreds of first prizes won by his birds when exhibited either by himself or his customers at the largest shows in the country. His catalogue is the talk of the poultry world. From a typographical and artistic standpoint it has no equal in the poultry line and as far as the contents are concerned it is a text book on the breed and worth many times more than the 25 cents which he asks for it. It contains the only color plate ever issued on the breed in this country. This catalogue has cost considerable, and the 25 cents does not begin to cover the actual cost of production. His mating list contains a small reproduction of a pair of Partridge Rocks in natural colors and is sent absolutely free to the inquirer mentioning the American Poultry

Journal. It contains descriptions of all the pens he has mated for the egg season, and it will pay those interested in this breed to send for it at once. Address F. N. Perkins, 22 Harlem Road, Freeport, Ill.

### 1913 DE GRAFF BOOK ON REDS.

We are in receipt of an advance copy of E. T. De Graff's new catalogue on Reds, which is without doubt the best ever put out by him.

For several years back the De Graff Book on Reds has been the finest poultry literature published, and the acknowledged authority on all subjects pertaining to Rhode Island Red fowls. While the book contains three colored true-to-life pictures, and steel engravings, all printed on the finest superfine paper with many fine illustrations, still the real merit of the book is in the original practical ideas advanced by Judge De Graff, who has made the study of Reds his life work.

The book is 9 by 12, containing forty pages of instructive matter with purple margin to colored pictures, bound with a dainty Japanese cover, giving it the appearance of a dainty bouquet of violets.

Five thousand copies are sold each year at twenty-five cents each to fanciers all over the world, and thousands of these pictures are framed in homes all over the world, making an advertisement that will never die.

The De Graff famous Reds have been shipped to every civilized country of the globe, and their extensive business is growing every year, proving that their customers must be getting best of satisfaction. Write for a copy to E. T. De Graff, Amsterdam, N. Y.

William Cook & Sons, originators of all the Orpingtons, of Scotch Plains, New Jersey, have had a very successful show season, winning with their Orpingtons one hundred and thirty-six first prizes, practically all the winners are in their best egg pens, which are better in quality than ever. Their first prize Buff Orpington cockerel, at Madison Square, 1913, is heading a pen, and eggs from his pen are \$20 a setting, the same as their other best eggs. It was reported that this bird was sold, but it is not so. Mr. Percy A. Cook reports that the demand for eggs is greater than ever this year, but with increased facilities, he is able to take care of egg orders promptly. This firm does not sell day old chicks, as they believe it is more economical for their customers to purchase their eggs, results from which are absolutely guaranteed. The demand for their new Blue Orpingtons is very large, in fact, more than the supply. For the benefit of those wishing to visit the Cook plant at Scotch Plains, N. J., Westfield, N. J., is the station to get off on the C. R. R. of N. J., which is only eighteen miles from New York City, and if they phone

or write, they will be met at the station. This farm holds the world's record for visitors in one day, last summer, on one Sunday, five thousand one hundred and two people looked over the place, and on a fine Sunday the average is over three thousand people. For the entertainment of visitors, besides the Orpingtons, animals of all kinds and ornamental land and water fowl are kept, all of which adds interest to a visit to this interesting and attractive place. Last week one of the bears on the place got out of its cage at night and spent two days at liberty before Mr. Cook caught it. In the meantime the school children for miles around had two days rest from school till the bear was caught. A new incubator cellar with a show room on top one hundred feet long has just been completed on this plant. Mr. Cook states that the competition this season for the \$50 cups he gives every year for his customers to compete for was more keen than ever, one man won four of them, and several two each. The competition for these cups gives quite a little enthusiasm to people having their birds, and adds to the interest of raising Cook Orpingtons. Their catalogue, with mating list, will be mailed on receipt of ten cents and mentioning this paper. Catalog contains the history of the origination of all the Orpingtons and hints on poultry keeping, and is an attractive book.

### LICENE KILLS THE LICE.

When other lice-killers fail, try Licene: it does the work every time. Send to the Licene Co., Pontiac Bldg., Chicago, Ill., 50c, and they will send you enough Licene for 200 birds. Read these testimonials:

So, Framingham, Mass., 3-11-1913.

Gentlemen: I have tried your Licene and carefully watched a cockerel that was very bad, on examination four days after applying I found he was absolutely free from lice. The method of applying is very clean. It seems to me if it would work in all cases as it has in this that you have the best thing on the market.

Yours very truly,

Arthur G. Duston.

Jacksonville, Ill., 3-7-1913.

Gentlemen: Your Licene is a wonder worker when it comes to cleaning lice from chickens. I cheerfully recommend it to all poultry raisers.

Yours, etc.,

D. T. Heimlich.

### BEST REDS IN AMERICA

TUTTLE'S FAMOUS STRAIN  
ROSE COMB RHODE ISLAND REDS

After May 15th we will sell 50 of our breeding males and females, including some winners at the big shows. (Successors to R. C. Tuttle.)

Maltbie & Shelley : Geneva, Ohio

## CARL C. BEATTY'S ROSE AND SINGLE COMB REDS

Always heavy winners at the best shows—winning at Cleveland, Indianapolis, Detroit, Mansfield, Lansing, and in all parts of the country in customers' exhibits. More Specials than any other strain. Young stock bred like, and bred by these classy winners. Prices reasonable. Quality the best. Booking limited number of settings from best matings. Write for prices.

CARL C. BEATTY -- SUCCESSION TO BICKFORD & BEATTY -- VAN WERT, OHIO

## S. C. BUFF ORPINGTONS

WILLARD'S CHAMPION SHOW WINNERS—200 birds now for sale. Males \$3; some bargains at \$5 to \$10 each. Females, \$2 up. EGGS from nineteen pens and three farm flocks. Incubator eggs, \$8 and \$10 per hundred. Special matings headed by prize winners, \$3 to \$15 per setting of fifteen. Large illustrated catalogue free. Write and mention American Poultry Journal.

WILLARD POULTRY FARM - - - LINDEN, MICHIGAN

## PRESCOTT'S ORPINGTONS

BUFF, BLACK, WHITE AND DIAMOND JUBILEE

Located in their new home. We are only 23 miles from Boston, on the main line of the B. & M. R. R., which gives us the best of train and express service. We have a grand lot of Orpingtons and are prepared to furnish both old and young stock. If you need anything good in Orpingtons let us hear from you. Eggs for hatching in all 4 varieties.

H. B. PRESCOTT -- 75 Salem St. -- ANDOVER, MASS.

# SIMPLICITY POULTRY FEEDER

## Insures The Health of Your Flock

### THE QUANTITY OF EGGS

Produced by a hen depends largely upon the method of feeding you pursue. It has been proven time and again that a hen must have proper exercise and proper food to keep in the best condition and produce all the eggs she is capable of laying.

### GET MORE EGGS

By feeding properly. Send for our free book "What And How To Feed." It contains valuable formulas, mixed rations for Spring, Fall, Winter and Summer foods, chick foods, growing foods, etc. It also tells you how to get the best results from such foods by feeding them with a **SIMPLICITY POULTRY FEEDER**. It is worth dollars to every poultry breeder. It is a book you will want for reference at all times and a book that will save you many dollars in feed bills if you follow the instructions contained therein.

Frankfort, Ind., March 11, 1913.

Simplex Supply House, Chicago, Ill.:  
I am greatly pleased with the Simplicity Automatic Feeder and Exerciser and I found it very successful, as I had a few pens of chickens which I did not have time to give attention to only once a day, and that in the morning—feeding them a mash and placing water for them. The chickens now successfully feed themselves during the day, as I kept them down in deep litter. The Feeders have certainly saved me much labor and brought chickens through the winter in a healthy condition and some of them are my first prize winning birds.  
Coulter Red Farm.

Columbus, Ohio, March 5, 1913.

Simplex Supply House, Chicago, Ill.:  
The two feeders are in use and working like a charm. Later along I hope to send for a few more, as my flock is on the increase and I like your feeder very much.

W. G. Pengelly.

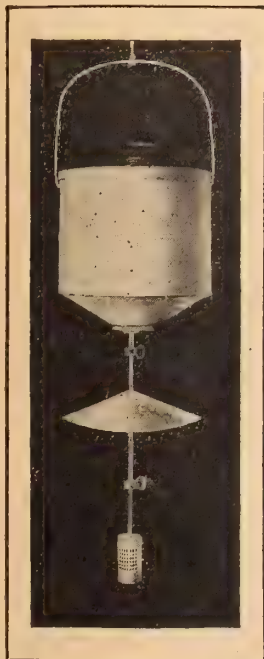

Fennville, Mich., March 5, 1913.

Simplex Supply House, Chicago, Ill.:  
Your feeders certainly are time savers and a very great convenience. My flock of R. C. R. I. Red pullets that I am feeding with your feeder were all hatched between May 20 and June 10th, 1912, commenced laying in November and your feeder was installed about December 15. In January, 1913, the 38 pullets laid 256 eggs, in February, 456 eggs, and so far this month are hitting a 60 per cent gait, which is evidence convincing to me at least that their feeding is about right. Shall want several more this spring to furnish a new house.  
F. O. Homel.

St. Louis, Mo., March 5, 1913.

Simplex Supply House, Chicago, Ill.:  
I am using three of your Simplicity Feeders and I like them very well. I fill them every ten days. They certainly save labor.

Chas. H. Brown.

Glen Ellen, Cal., March 10, 1913.

Simplex Supply House, Chicago, Ill.:  
I have been using your feeder in the brooder house with baby chicks and it works very well. The one I have has saved me quite considerable trouble and care in feeding.

Lawrence Bufford.

Racine, Wis., March 5, 1913.

Simplex Supply House, Chicago, Ill.:  
I beg to advise that your feeders have been most satisfactory. I have found them to be time-savers and of great benefit, as they give the chickens plenty of exercise in securing their feed.

Wm. H. Armstrong.

Chicago, Ill., March 10, 1913.

Simplex Supply House, Chicago, Ill.:  
Your Automatic Feeder is satisfactory in every way, and as our stock increases, I will favor you with more orders.

J. J. Maitre.

Crystal Lake, Ill., March 10, 1913.

Simplex Supply House, Chicago, Ill.:  
I am more than pleased with the six Simplicity Feeders that I ordered last November, and they have given me no trouble whatever. With best wishes, I beg to remain,

Wayne Groves Barrows.

Pittsburgh, Pa., March 10, 1913.

Simplex Supply House, Chicago, Ill.:  
The Simplicity Automatic Feeder you shipped to me was received and I have had it in use for three weeks, and I am well pleased with it. It does good work and is a great saving in feed. I think it is a great exerciser and keeps the chickens working and laying.

Frank Butler.

Fitchburg, Mass., March 12, 1913.

Simplex Supply House, Chicago, Ill.:  
I am giving the Simplicity a fair trial. I have three other makes of Feeders in my hen house. So far as I see your feeder appeals to me as the most satisfactory.

Very truly yours,

Dr. N. Wallis.

## THE SIMPLICITY POULTRY FEEDER

Is all that its name implies. It's "Simply Perfect and Perfectly Simple." No mechanical parts to get out of order, nothing to clog up, no springs to break, adjustable to the finest degree, feeds any kind of grain from whole corn to millet seed either whole or mixed. All you do is fill the hopper and the chickens do the rest.

The **SIMPLICITY POULTRY FEEDER** works from every direction. It scatters the feed further than any other and makes the chickens exercise and produce all the eggs they are capable of laying. The **Simplicity** is shipped to you in a compact form and you will have no further expense after you send in your order to us, as it is delivered to your door prepaid, will last a lifetime, and is constructed so that it is impossible for any part to get out of order and it **Can't Clog**. Feeders that choke up when a piece of straw or corncob gets in, or fail to work for any other cause, are worse than no feeder at all. If you depend on a feeder, it should work at all times so that the fowls will not go hungry. We guarantee that the **Simplicity** will work at all times and not choke up.

#### MONEY BACK GUARANTEE

Every feeder sold by us is sold with the understanding that we will refund your money if the feeders are not satisfactory and you notify us to this effect within thirty days after receiving them. Your jobber will sell them to you on the same terms. You won't make a mistake if you equip your plant with **SIMPLICITY POULTRY FEEDERS**, as they will pay for themselves in 30 to 60 days and will make money for you at the rate of 50 per cent thereafter.

#### AGENTS WANTED

**SIMPLEX SUPPLY HOUSE**  
PONTIACA BUILDING -- CHICAGO, ILLINOIS

#### SIZES

Ten quart size holds nearly one and one-half pecks and will feed a pen of 10 to 15 birds at least one week. Twenty quart size holds nearly three pecks and will feed an average pen about three weeks or a flock of 20 to 30 birds at least one week.

#### PRICES DELIVERED EAST OF THE ROCKIES

Quantity	Baby	10-qt.	20-qt.
Each	\$ 1.25	\$ 2.50	\$ 3.50
Lots of 6	6.00	12.00	18.00

Orders of less than six 10 or 20-qt. feeders and Baby feeders in dozen lots or less will be shipped by Parcel Post or prepaid express within a radius of one thousand miles. Longer distances and larger orders for all points east of the Rocky Mountains will be shipped by prepaid freight, unless otherwise instructed.

# CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

**THE BEST RESULTS FOR YOU IN POULTRY RAISING**

Whether you are a professional or an amateur you want the maximum result from the investment of your time and money.

**"WRIGHT'S NEW BOOK OF POULTRY"**

Is the Key that Unlocks the Door of Poultry Success.

It is the foremost practical book on Poultry and Poultry-raising that has yet been published, in the opinion of all the leading Poultry Editors and Poultrymen.

The Poultry papers quote from it constantly as the Authority. Hundreds of purchasers have written to us, unsolicited, commending it without stint.

**Will You Examine it at No Expense to You?**

We want your permission to place this volume in your hands for **Five Days Free Examination, All Expenses to be Paid by Us.**

Fill out the application form below and mail it to us with 50 cents, and we will send you this book on approval express prepaid.

**Who Is Lewis Wright?**

Lewis Wright wrote his first Poultry book thirty-five years ago. It was called "The Illustrated Book of Poultry." The present work, new throughout, thoroughly modern and up-to-date, is the natural fruit of his long experience in raising and writing about Poultry. He visited hundreds of model plants and interviewed the most successful poultrymen in all parts of the World to secure his data; and his book, first and foremost, is based upon Actual Experience. Mr. Wright was the one Poultry expert selected to write all the Poultry articles for the new 11th edition of the Encyclopaedia Britannica, perhaps the greatest honor that could be conferred upon him.

What safer guide than Mr. Wright can you follow to success? Why not take advantage of Mr. Wright's experiences, his mistakes and successes?

The book has chapters on the following subjects and others: Poultry Houses and Runs—The Science of Feeding Poultry—Practical Management and Feeding of Fowls—The Egg and Sitting Hen—Artificial Incubation—Rearing and Care of Chickens—Poultry for the Table—Poultry Farming—Exhibition Poultry and Utility—Pedigree or Line Breeding—Practical Breeding and Rearing of Prize Poultry—Exhibiting—Judging—A chapter on each breed of chicken of all countries, besides chapters on Turkeys—Guinea Fowl—Pea Fowl—Ducks and Ornamental Water Fowl—Geese and Swans—Poultry Diseases and Vices—Vermin.

**Let Us Make Our Offer Plain To You.**

The 50c you remit with the Application Form is simply an evidence of good faith; it is placed to your credit. The signing of the Form does not obligate you in any way to purchase the book. If you decide to keep it,

you need not remit until the next monthly payment of \$1.00 is due. If unsatisfactory, the book need simply be held awaiting our instructions, and we will at once refund the 50 cents.

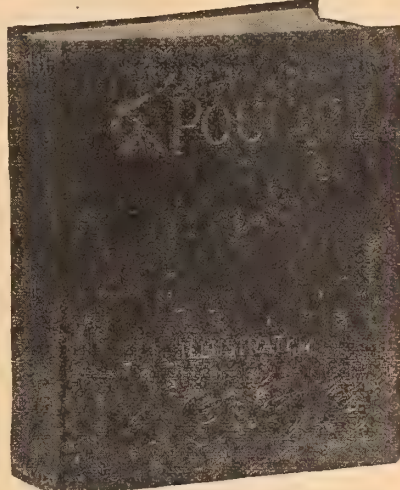

**We Could Not Make It Easier For You To Inspect This Book**

before buying; and the present plan of sale is based upon our unbounded confidence in the very great practical value and usefulness of this work to you. An examination, moreover, will enable you to judge its merits far better than any description from us. But let us add a few details.

**Special Offer To Responsible Readers:**

Let us send you this great work on approval. We want you to examine it thoroughly before deciding. We want you to judge for yourself its great, practical, money-making value to you. The price is only \$3.50. Just send us 50c with the coupon opposite and you will receive the book, carriage prepaid. If after five days you don't want it, simply notify us and hold subject to our order. We will then refund your money. If you keep it pay us the balance \$1 a month until settled in full. [If you wish to pay us cash deduct 5%.]

The present stock of the work is limited, and it takes a period of time to reprint. May we ask, therefore, that you mail the Application Form at the **earliest possible moment**, so that you may avoid the necessary delay should we be out of stock later? The books will be shipped out on approval in the order of the receipt of the Application Forms.

**Beautifully Printed and Illustrated and Strongly Bound**

Forty-five full page plates in colors and black-and-white of this splendid work, all by J. W. Ludlow; and there are innumerable pictures throughout the text. Finely printed in a large, clear, readable type and bound in stout, durable cloth binding with lettering in gold; gilt edges on three sides. Size of volume 9 1/2 x 12. Weight, seven pounds.

# DON'T KILL THE LAYING HEN

**T**HE HEN that lays is the hen that pays. Hundreds of thousands of hens are killed each year that are in full laying condition, while an equal number are kept in the flock that never have or never will lay an egg, or at best will lay only a very limited number. All this may be avoided if everybody would use the Potter System of telling the layers from the non-layers.

## Cull Out the 'Drones and Save on Feed

Why should the poultry breeder go on wasting feed by feeding a lot of hens that do not produce enough eggs in an entire year to pay for their feed for one week, when it can be avoided by learning the Potter method of telling to an absolute certainty just which hens are the producers and which are the drones in the flock?

If you know the Potter System you can reduce the size of your flock and save money on your feed bill, and at the same time secure just as many eggs at from one-third to one-half the cost. Is not this worth considering?

The Potter System is the only reliable system on this subject, and anyone can learn it in an hour's time, and we guarantee that anyone with a little practice can go among a flock of fowls and pick out the layers as rapidly as the birds can be handled. We have thousands of unsolicited testimonials from people who have purchased our book "Don't Kill the Laying Hen" and learned how to pick the layers and who consider the book worth many times the cost. Read what a few of them have to say:

## TESTIMONIALS

3095 W. 100th, Cleveland, Ohio.

Gentlemen:—Having received one of your books regarding the laying hen, I am pleased to say that it has done a great deal for me and would not part with it for many times what it cost if another could not be had. Yours truly, JOHN VAN SCHOER.

304 Grand Allee, Quebec, Canada.

Gentlemen:—I received your book "Don't Kill the Laying Hen" some time ago. I am very much pleased with it and think it the best book I have ever read and would not be without it for any amount you would ask for it, and think every person that keeps fowls should have a copy. Yours truly, ED. ARCHER.

Wellsville, N. Y.

Gentlemen:—I received your book on "Don't Kill the Laying Hen." Will say that it is all you claim it to be and that it is no fraud. I went out to the hen house last night and tried the test. It worked to perfection. I predicted that a few hens would lay the next day, and sure enough some of them have laid. Very truly yours, WM. H. LEO.

Jutland, N. J.

Gentlemen:—Yours at hand and am glad that you have notified me of your new book of the system of selecting laying hens. Your old book has saved me many a dollar on feed bill, besides giving me more room for the layers. I would not be without this book for any money and am glad you have added more to it. Yours truly, M. V. TAYLOR.

977 Wilcox Ave., Chicago, Ill.

Gentlemen:—I must say your book "Don't Kill the Laying Hen" is valuable to any poultry keeper; it is worth its weight in gold and your system reliable in every way. I am more than pleased with it. I have told some of my friends about the system and they got the book and are pleased with it. Yours truly, JOHN MOYER.

Box 105, R. R. No. 1, Charlestown, Ind.

Gentlemen:—I am ashamed that I have allowed almost two years to pass without writing you how thoroughly I endorse and value your book "Don't Kill the Laying Hen." The only thing I don't like is I can't tell my poultry friends all it has taught me. I would not be without it for many times its cost. We frequently ship fifty or sixty hens and get as many eggs as before, showing we had not shipped laying hens. It saves me a trip to the poultry house at night to know which are broody hens. At feeding time I examine all hens on the nest and shut up the broody hens. Yours very truly, MRS. B. R. McCONNELL.

Deer Creek, Okla.

Gentlemen:—Your letter and circulars to hand and contents noted. Yes, the best I can do is to have the new book "Don't Kill Biddie." It has made me one hundred and ninety dollars and still making more, and only a few chickens, from 70 down to 44 now. I'm running two machines and selling enough to support me and living like Queen Victoria. Yours truly, G. W. NORMAN.

Tucson, Ariz.

Gentlemen:—Your book in regard to the laying hen received. It is well worth the price. Anyone owning a small flock of chickens ought to have one. Yours truly, J. A. GORDON.

614 Boos St., Harrisburg, Pa.

Gentlemen:—I received your book on "Don't Kill the Laying Hen" and must say it is all it is claimed to be and more. Yours truly, GEORGE J. GRIFFEE.

Lincoln, Kansas.

Gentlemen:—Your book "Don't Kill the Laying Hen" is just the thing for a poultryman. I don't see how I got along without it. I would not part with the knowledge gained from it. Yours truly, MRS. IDA MEIER.

# THE FOURTEENTH EDITION OF THE GREAT POTTER BOOK

is just off the press. Revised and improved to such an extent that it is now without question the **greatest book** of its kind ever published. This book contains 96 pages, (6½x9 inches) and 38 illustrations; printed on super-calendered paper, bound in two kinds of binding-paper and cloth. Will make a very valuable addition to any poultryman's library. In fact, no one who raises poultry, no matter how many or how few, can afford to be without a copy of this great book. The secret this book contains is worth many dollars to anyone.

**More than 100,000 copies** of this book have been sold during the past few years, which in itself is conclusive evidence of the value of this book. When ordering a copy of this book you must promise not to reveal the secret to anyone except the immediate members of your family. The secrets it contains cannot be obtained from any other source. Everyone who receives this book is pledged not to reveal them to others. Therefore, it is to your interest to obtain a copy of this book at once and become a member of Potter's great "secret" family, stop killing the laying hen, thereby greatly increasing your poultry profits.

The Potter System of telling the laying hen has stood the test of time. It has been advertised in these columns for the past eight years, and during that time thousands of copies of the book have been sold and thousands of poultrymen all over the country have been enabled to turn loss into profit and thousands more can do the same thing if they will take advantage of the following offer:

## How to Get the Great Potter System

Realizing the great importance of this system to all poultry breeders the American Poultry Journal Publishing Co. has secured the exclusive right to print and sell this great work, and the benefits to be derived from system will be given to American Poultry Journal subscribers only.

## OUR GREAT OFFER

In order to supply every poultry breeder with the great Potter System and the greatest poultry journal on earth, we have put the price within reach of all, as follows:

**Don't Kill the Laying Hen (Paper Cover) } BOTH FOR  
American Poultry Journal, one year . . } \$1.30**

**For the Cloth Bound Edition, \$1.50**

## A History of Eight Non-Laying Bob-Tailed Hens and One That Was Not Bobbed

Including valuable scientific facts regarding molting. A supplement to "Don't Kill the Laying Hen." This supplement gives the story of One Hen that was not bobbed; the story of the first four non-laying bobtailed hens; the other four non-laying bobtails; how hens having red combs are deceiving; forced molting bad business; how the laying season may be extended and many more eggs obtained, or why hens having good laying organs stop laying early in the season, and much other valuable information which is worth far more to the average breeder than the small price we are asking.

If after a careful study and trial of the system you find that we have misrepresented this system in any particular, money will be cheerfully refunded. We have given this system a thorough investigation and know whereof we speak. If you are already a subscriber to A. P. J., we will extend your subscription one year from its present expiration. Send all orders to

## BARRED ROCKS-WHITE WYANDOTTES-SINGLE COMB REDS

**Woodview Strain Canada's Favorite Line**  
**Winners at Canada's and America's Best Shows**

**Guelph, Ont., Dec., 1912.** Canada's greatest exhibition. In Barred Rocks, 300 birds competing, we won cocks, 1-2-6; hens, 1-4; cockerels, 2-5; pullets, 1-4 Wyandottes: cock, 1st, etc. Reds: cockerels, 5th; pullets, 1st, etc. Several specials. My 1st pullet was pronounced the best female ever shown in Canada.

**Detroit, Mich., 1913.** Barred Rocks: Cock, 1-3-4; cockerels, 1-5; pullets, 1; cockerel mating pen, 1st; color and shape special males, etc. My birds have won for several years at Guelph, Toronto, Ottawa, etc.

**Special Sale** Barred Rock and Wyandotte cockerels, trios and pens properly mated, birds of quality in shape and color, extra values, at exceptional prices for best possible breeding and practical quality.

**Eggs for Hatching** from selected matings. My mating list for the asking. Write me your wants for **Sturdy Stock**.

**Jno. Pringle**

**London, Ont.**

## HICKSON'S BARRED PLYMOUTH ROCKS

**WIN AT THE NATIONAL CLUB SHOW -:- CHARLOTTE, NORTH CAROLINA, 1913**

The greatest record ever made at any **Club Show** was won by my birds January 10-14, 1913, at the Barred Rock Club annual meeting show in a sensational class of quality, the largest and best ever had in the South. I won Cocks, 1, 3; Hens, 1, 2, 3, 5; Cockerel, 1st; Pullets, 2, 4, 8; Pen, 2d; Pullet Bred Cockerel, 3d; Cockerel Bred hen, 1st, and more points than all others combined. My **First Prize Cockerel** also won Special for color, Special for best cockerel in the American class, and the **Sweepstake Special** for best male bird in the show. This line has been bred for nearly 20 years, and for years has won at the **Virginia State Fair** and other leading shows of the South, proving them of the richest quality and producing lines. Stock for sale. Eggs for hatching, \$5 per setting from my choicest matings. Circular free. Write me your wants. Absolute satisfaction assured. Mention **American Poultry Journal**.

**M. B. HICKSON -:- BOX 4 -:- LYNCHBURG, VIRGINIA**

## THE 1912 REVISED EDITION OF THE AMERICAN STANDARD OF PERFECTION

The only American authority on the required characteristics of all breeds and varieties of chickens, ducks, turkeys and geese. You cannot raise, mate, exhibit or sell fowls intelligently without it.

**This Great Book** was revised this year (1912) and gives the correct

Standard shape, color and weight of every recognized variety of chickens, ducks, turkeys and geese, as well as the disqualifications of each variety. The book contains 332 pages of descriptive matter and ideal illustrations of the different varieties of fowls, photographed from living models. Also

### Five Full-Page Illustrations of Feathers in Natural Colors

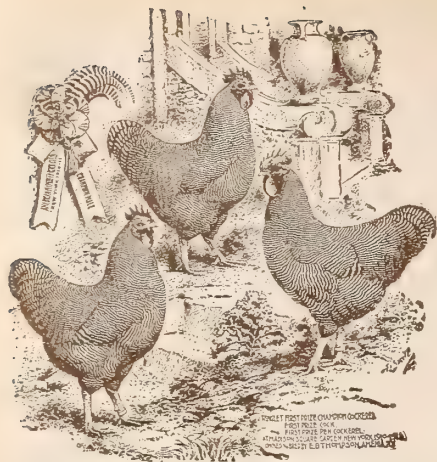

to guide the breeder in getting the correct color of plumage on his birds. No one can breed birds of any variety for exhibition without a copy of the **American Standard of Perfection** as a guide, and it is the only book of its kind published in this country. It is authorized, copyrighted and published by the **American Poultry Association**. Price postpaid, cloth, \$2; leather, \$2.50.

### OUR SPECIAL MONEY-SAVING OFFER

**The Standard (cloth) and American Poultry Journal one year..... \$2.50**  
 If you want leather binding add 50c to this price. Canadian subscribers add 25 cents per year for postage; foreign 50 cents

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

The Three Greatest Living Barred Rock Males

# E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

Win the most wonderful record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—this winter of 1913. See pages 713 and 714 for this unprecedented achievement unequalled in the annals of Madison Square Garden history.

My Imperial "Ringlets" won more first, regular and special prizes than any exhibitor of any breed.

To produce the first prize cockerel and champion male and first prize pullet and champion female in a single year, and win the two greatest prizes in the world at one New York Show has never before been accomplished by any living Barred Rock breeder.

A prominent eastern breeder said: "Mr. Thompson, I will give you \$1,000 for your first prize cockerel"—\$5,000 would not buy him.

Theodore Hewes, the judge and editor, said: "No Barred Rock breeder ever saw such a cockerel nor did they think any such a bird could ever be produced."

## My Whole Exhibit Wore the Distinctive "Ringlet" Barring

For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1st, 2d, 3d, 4th and 5th prizes on pullets has never been approached in Madison Square Garden and stands alone and unequalled.

The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs.

I will sell you grand exhibition birds for any show and breeders of this richest first prize New York blood.

Richly illustrated 70-page catalogue upon request, it is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in all the world, \$10.00 per setting; four settings, \$35.00 one hundred eggs, \$60.00.

# A. C. HAWKINS' ROYAL BLUE BARRED ROCKS SWEEPSTAKES CHAMPIONS AT New York, Boston and Chicago

"ROYAL BLUE" First Prize Sweepstakes Champion Cockerel at New York

They have produced the winners at the World's Greatest Shows for 25 years, and at the Great New York Show, 1911-1912, made a **WORLD'S RECORD**, winning six out of eight prizes awarded on Barred Rock Cockerels, including First Prize and Sweepstakes Silver Cup for Best Cockerel, and Grand Special Prize for Best Cockerel Mated Pen.

AT CHICAGO, Dec., 1912, in a class of over 400 Barred Rocks they won Four First Prizes and the **GRAND SWEEPSTAKES CHAMPIONSHIP \$100.00 CUP** for the Best Display of Barred Rocks. My White Rocks and Columbian Wyandottes have won more prizes at New York and Boston than any other strain and have no superiors.

**2000 CHOICE EXHIBITION AND BREEDING BIRDS** for sale at honest prices. Finely illustrated Catalog of the World's Champions Free.

## CAMPINEOLOGY—Second Edition

"Story of the Living Egg Machines" and what it contains. CHAPTER NO. 1—Greeting, a chapter that will set the poultry world thinking. CHAPTER NO. 2—History of the Campine fowl, ancient and modern. CHAPTER NO. 3—Description and characteristics of Campines in detail. CHAPTER NO. 4—The Campine fowl as I have found them, giving the reasons in full why I do after over twenty years of breeding and experimenting with many varieties recognized by the American Standard, now recommend and breed exclusively Campines and call them "Living Egg Machines." CHAPTER NO. 5—How to select and mate the Campine fowl. CHAPTER NO. 6—Tells you all about the IMPROVED CHAMPION STRAIN or in other words the original exhibition strain and the greatest utility fowl in the world. CHAPTER NO. 7—Prices of stock and eggs for hatching, also my way of doing business which guarantees entire satisfaction to every customer, and a number of bouquets that I have received during the past season. Now besides the above seven interesting chapters it contains two beautiful colored plates, each being a work of art, as well as a number of classy illustrations. Ten cents to pay postage will be appreciated.

# SECOND TO NONE--ANCONAS

America's and England's very choicest imported and bred Anconas; and also White Indian Runner Ducks, including Crystal Palace, Madison Square Garden, Cleveland, Guelph, Toronto, London, Hamilton, East York, and all the large shows in Canada. The only line-bred registered Anconas in America. Write for my mating list and particulars. Eggs from this stock cannot fail to produce you first prize show birds, and in my pens are the following birds: 1st cock, Madison Square Garden, New York, 1913; 1st and 2d pullet, Madison Square Garden, New York, 1913; 1st cockerel Crystal Palace, England; 1st and 3d hen, Guelph, Ont., 1912; 1st, 2d, 3d, and 4th pullets, Guelph, Ont., 1912; 2d cock, Guelph, Ont., 1912; 1st hen, Toronto, Ont., 1912; 1st pullet, Toronto, Ont., 1912; 1st, 2d, 3d, 4th pullets, London, Ont., 1912; 1st and 2d cockerel, London, Ont., 1912; 1st and 2d cocks, East York, Ont., 1912; 1st and 2d hens, East York, Ont., 1912; 1st cock, Hamilton, Ont., 1912; special hen, Hamilton, Ont., 1912; Quebec Provincial Poultry Show, Montreal, Feb., 1913, 1st and 2d cock, 1st, 2d and 4th hen, 1st, 2d, 3d and 4th cockerel, 1st and 2d pullet. I have also a number of other prize birds too numerous to mention.

**Dr. A. H. Hall, Prop. Diamond Ancona Poultry Yards, 394 Main St. E., Hamilton, Ontario**

Pres. Canadian Mottled Ancona Club; member of the International Ancona Club, Ancona Club of America, Ancona Club, and, in fact, I am a member of every Ancona Club in America.

## The Wyandottes

are acknowledged by all poultry authorities to be the greatest utility and fancy fowl.

What could be more beautiful than the White Wyandotte with its clear white plumage, red comb and face, and rich yellow legs? Snow white Wyandottes are bred for utility alone, others for exhibition purposes only, but

## The World's Best Strain

is bred to the highest degree of perfection for both exhibition and utility purposes. If you want birds that will breed exhibition birds we can supply you; if you want utility birds, heavy layers, write us.

If you need a cock or cockerel for breeding purpose we have them by the hundreds, females for breeding for fancy and utility purpose by the thousand.

Whenever you see the "Bars" think of Riley's Rocks—Barred of course

## RILEY'S BARRED PLY. ROCKS

### May Is the Month

Without any doubt more winners are hatched in the month of May than in any other month. In looking back over my own and my customers' records, it has invariably been the case that the leading show specimens were May hatched birds. Take the past year, for instance, and I find that the following famous winners were all hatched from my eggs in May.

The Third Madison Square Cockerel  
The First Boston Cockerel  
The First National Club Meeting Cockerel

The First Cleveland Cockerel  
The First Chicago Pullet  
The Fourth and Fifth Madison Square Pullets

Are you going to be one of those to obtain some of these May hatched chicks and raise the winner for your next show? Remember that during the past years Riley birds have landed the principal honors at our largest shows, and I **SELL** you the very best that I have, and there is not a bird or a mating on my farm that my customers do not get their eggs from. They are there for your selection, and you get what you choose. My illustrated mating list will tell you all about my matings, and show you pictures of my famous winners, and will tell you how my customers have succeeded in winning the greatest honors in the country with my strain. Send for one now.

## Make your hens profitable

A leaky roof will make your hen house unsanitary, even in mild  
weather. Dampness chills the fowls, causes roup, and your  
money goes for medicine and extra food to supply warmth.

Give your fowls comfortable quarters by covering the hen house with

## Certain-teed Roofing

(Quality Cert-ified—Durability Guaran-teed)

in Rolls and  
Shingles

Then you get an absolutely water-proof and weather-proof roof that is guaranteed  
for 15 years but it will last much longer.

Our new book, "Modern Building Ideas and Plans," illustrates  
the best ideas in Poultry Houses, Dairy Barns, etc.—it  
suggests economies and conveniences that will save you  
money.

A book of this kind would ordinarily sell for \$1, but as  
it shows the use of our **Certain-teed** Roofing on all kinds  
of model homes and farm buildings, we offer it to you for  
25c. We prefer to have you go to your lumber, hardware  
or building material dealer, who will gladly get you a copy  
free. If you write us, enclose 25c to cover cost, postage,  
and mailing. Ask your dealer for this book today.

A Year's Course in  
Poultry Culture

For the Novice and the Expert—the Amateur and Professional

**T**HIS COURSE is used by a number of Agricultural Colleges. Many poultrymen have paid \$20 for it by mail. It is one of the most thorough and practical courses ever devised.

The course covers every phase of the poultry business. It gets right down to the root of each problem. It steers the beginner around the pitfalls, and gives the established poultryman new ideas and methods. The following synopsis shows how complete it is. Each of its 25 divisions is a complete lecture on its particular subject.

I—The Poultryman and His Calling. II—The Purpose of Poultry Keeping. III—Location of the Plant. IV—Buildings, Plans, Estimates, Construction and Interior Furnishings. V—Yards, Parks and Ranges. VI—Nutrition. VII—Feeding. VIII—General Management. IX—Eggs. X—Breeding. XI—Breeds. XII—Incubation. XIII—Brooding. XIV—Rearing Chicks After Brood-

ing Age. XV—Preparing Pullets for Laying. XVI—Preparing for Market. XVII—Marketing. XVIII—Diseases. XIX—Parasites and Other Enemies. XX—Exhibiting, Scoring and Judging. XXI—Wastes, Leaks and By Products. XXII—Records and Accounts. XXIII—Advertising. XXIV—Cooking Poultry Products. XXV—Poultry Literature.

This Course Begins in the April Number of Poultry Item, "America's Most Talked-About Poultry Magazine." It Runs Through the Year, With Liberal Installments in Every Issue.

## The April Number is the Big Leghorn Special—Don't Miss It

Poultry Item makes no "wonderful premium offers." It gives away no "valuable inducements." It needs none. It charges a fair price for a straight subscription—and is always worth it. It gives its readers sound, practical, up-to-date information. Each issue is helpful with its Question and Answer department, Timely Editorials, the news of the poultry world, pictures of hundreds of prize-winners. What its readers like about The Poultry is its individuality. Add it to your list—it will pay you.

Subscription Price, 50c a Year, 3 Years, \$1

Subscribe Now! Send the price today! Get this Valuable Course and the Big Special Numbers. Don't wait. Remember, the Course starts in the April Number.

JEFFERSON'S  
White Runners

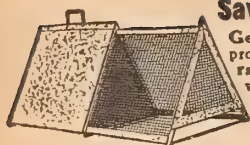

Win where quality counts—never defeated. At the greatest show held at Madison Square Garden, Dec., 1911, our ducks controlled the highest winnings. Our winnings include 1st cockerel, 1st pen, second pullet.

At Southern International Show, Atlanta, Ga., Dec. 16-21, 1912, our Madison Square Garden 1st cockerel won first cock. Also won 1st cock at Savannah, Ga., Nov., 1912. This winning cock is without doubt the greatest white runner in America. He heads our all-prize pen this season. These great ducks, together with our other prize winners, place Jefferson's White Runners far in the lead. Our string of winnings at Chicago, Cleveland and Savannah include many firsts. Day-old ducklings, 50 cents each.

Eggs, \$5.00 per 12, \$8.00 per 24, \$15.00 per 50, and \$25.00 per 100. Why pay more, we guarantee satisfaction. Stock for sale.

Jefferson Poultry Farm, Albany, Ga.  
Citizen's First National Bank Bldg.

## 150,000 Day-Old Chicks

are all we can supply this season

Last season we returned hundreds of dollars because we could not hatch enough chicks to supply the demand. During the spring months our capacity was booked from six to eight weeks in advance. This season there is only one sure way to get stock when you want it and as much as you want. **Book your order now—FREE** for Day-old Chicks, Hatching Eggs and 8-weeks-old Chicks. Send no money now—not a cent until just before the date of your shipment. Think of these records made by our customers:

**Pullet lays first egg at 96 days.  
Ten hens lay 2497 eggs in one year.**

We make shipments anywhere and guarantee safe arrival. Remember we can hatch only 150,000 chicks this year, so get in your order at once.

#### 8-weeks-old Chicks

A new and successful plan to get quality stock. Brooders not needed. Avoid losses from bad weather, hawks, etc. Can ship all pullets, or any proportion desired.

#### \$225 in Prizes to be Given Away

Our great "First Eggs" contest, to see how early Pittsfield Pullets will lay for our customers, is under way. Send for details.

#### "Money-Making Poultry"

Get this great, free, helpful poultry-book. Explains our feeding system and tells you how to adapt our simple methods to your own profits.

**PITTSFIELD POULTRY FARM CO.**  
102 Main St., Pittsfield, Maine

#### Eggs for Hatching

We invariably fill orders with hatching eggs laid the same day that shipment is made. We ship any distance—frequently to the Pacific Coast. Safe delivery guaranteed. Eggs from our special pens of Prize Winners can be had. Our Pittsfield Birds won more Prizes at Boston this year than any other Barred Rocks.

## The Poultryman's \$18 Typewriter

Every poultryman who runs his place in a business-like way needs a typewriter. It saves time, worry, mistakes, and gives you copies of everything you write. Helps you sell direct to the city trade. But don't pay \$100 for big, cumbersome machine. Bennett Typewriter for poultrymen at \$18 does all work of higher priced machines. More durable because simpler. It is result of a wonderful invention. Made in famous Elliott-Fisher factory where \$175 to \$1000 Billing Machines are made. No special desk needed. Easy to learn on and run. Few parts, so can't get out of order. Hundreds of poultrymen save time using Bennetts daily. Can be sent parcel post. You can see writing all the time. Standard keyboard. 84 different characters. Sold on money-back-unless-satisfied guarantee. Write for catalog. Special proposition to live agents.

A Whitewasher at Work

## Two Secrets of Success

### BETTER BROODING and NUTRINE CHICK SALTS

**RAISING THE CHICKS YOU HATCH** is the Main Secret of Success in Poultry-Keeping. Many breeders do not know how many chicks they lose because they die one by one. It's easier to hatch chicks than to raise them. Read page 68 of our Big Free Catalogue. It gives the experience of men who raise nearly every chick—raise them strong and big and hearty—the kind that win at shows, and pay to grow for layers and market.

**NUTRINE CHICK SALTS** is a food—not a medicine. It provides bone, sinews, feathers and aids digestion. It furnishes the necessary earth salts that are not found in sufficient quantity in corn, wheat, etc. It helps puny, weak chicks grow strong, and keeps the strong ones growing faster and feathering to perfection. Read about it in our Free Catalogue.

2 lb. package 50c (65c postpaid); 5 lb. package \$1.00 (\$1.25 postpaid.) (We pay freight if ordered with Incubator or Brooder.) It costs about 5c a week for 50 chicks.

The Separate Parts of Essex-Model Portable Hover. Can be used in any House, Coop, Box or Home-made Brooder. Best and Cheapest. Only \$7.50. See full description in catalogue.

### SHALL BUY MORE HOVERS

I have been using six of your Hovers all season, and find them so satisfactory shall probably buy more. I like the idea of being able to get at the chicks so easily.

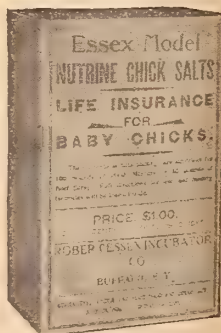

**HARRY H. PIKE**

### BEST AND CHEAPEST

The Portable Hovers I received from you are the best I have ever used. I have not lost any chicks since I have used them. They are the best and cheapest I ever had in my 20 years of experience.

**J. B. WOOD**

Supt. for E. E. Lorillard

### NO WHITE DIARRHOEA —RAISED 1000

Ashtabula, Ohio

Robert Essex Co.,

Our success is in a large measure due to the use of Nutrine Chick Salts. We are marketing broilers which have always had access to Nutrine Salts. With nearly a thousand chicks, ducklings and goslings, on hand, we have yet to find our first case of leg weakness or white diarrhoea. Barring accidents, we are raising practically every chick well hatched, in spite of heavy forcing. **REDBROOK POULTRY FARM**

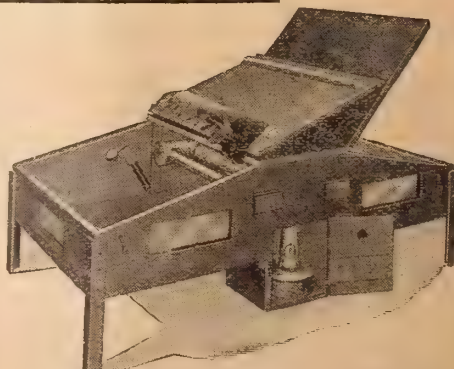

## America's Largest Line of Incubators and Brooders 19 Styles and Sizes, \$2.25 to \$48

There is no Hover on earth so good and cheap as our \$7.50 Portable Hover, and no Brooder to equal our Double New Homestead Brooder at the price. Buying a Brooder is even more important than buying an Incubator. We offer you the largest choice of Incubators and Brooders, at prices to suit your pocket.

Did you get our FREE CATALOGUE? If not, write for it, and read the Five Chapters on Poultry Raising written by Robert Essex; see the 30 Photos of the Latest Houses on Experiment Stations; also the illustrations and descriptions of the Greatest Line of Incubators and Brooders made anywhere, by anybody. The Most Superior Machines at low prices. Address nearest office.

## Robert Essex Incubator Company

3 Henry Street, Buffalo, N.Y.  
 67 Barclay St., New York City

Essex-Model Double New Homestead Brooder. Two Brooders at price of one. Can be used as one big brooder by removing partition. Only \$10.00.

## Baby Chicks

were the biggest poultry fact of the last decade. The shipping of baby chicks has superseded the eggs-for-hatching industry.

## Custom Hatching

is the biggest poultry fact of the present decade. The hatching of the eggs of a neighborhood by a specialist is fast supplanting home hatching.

## Mammoth Incubators

made the baby chick trade possible by hatching good chicks in large quantities. It is making custom hatching possible by hatching chicks at less cost, including the operator's profit, than they can be hatched for at home.

## A Man Named Hall

invented the Mammoth Incubator and built one for his own use in 1896 on his farm at Pembroke, N. Y., and started the custom hatching industry in this country. The capacity was rapidly increased until the surrounding farmers brought Mr. Hall upwards of a hundred thousand eggs to be incubated each season.

## Ten Poultry Farms

which are selected from a much longer list, have made such profit from producing baby chicks and doing custom hatching with Hall Mammoth Incubators that they have seen fit to double their capacities:

	Original capacity		Present capacity
Allen's Poultry Yards, Waltham, Mass.	3,000	-	6,000
Branford House & Farms, Groton, Conn.	4,500	-	9,000
S. B. Denlinger, Doylestown, Pa.	6,000	-	12,000
Golden Glow Farms, Milford, Mass.	6,000	-	12,000
Crescent Egg Farm, Allegan, Mich.	6,000	-	12,000
R. L. Hutchinson, North Raynham, Mass.	6,000	-	12,000
E. T. McGalliard, R. D. No. 5, Trenton, N. J.	6,000	-	12,000
Pittsfield Poultry Farms, Pittsfield, Me.	12,000	-	24,000
William Horrocks, Herkimer, N. Y.	15,000	-	30,000
C. M. Woolver, Richfield Springs, N. Y.	15,000	-	30,000

## VIGOR BIG HATCHES EARLY LAYING SUCCESS

Your ability to succeed in the poultry business is measured by the vigor of your flock. Hereditary constitutional vigor is the one character above all others which your poultry should possess. Yesterlaid Egg Farms are vigor specialists. They raise SUPERIOR standard-bred Leghorns by the thousands, which are so rugged, lusty and thrifty that their chicks inherit their constitutional vigor and hatch like popping corn.

THEY LAY—THEY WIN! Yesterlaid breeders produce perfectly shaped, chalk white, BIG eggs—their pullets lay early—at four months—in customers' hands. Yesterlaid Leghorns are exhibition fowls too. Chicks hatched from their eggs win in the hands of customers—names on request.

Experiment Stations and other Institutions recognize the superiority of Yesterlaid Leghorns. Fifteen Experiment Stations have BOUGHT Yesterlaid stock or eggs.

### HATCHING EGGS.

13, \$2.00; 26, \$3.50; 50, 5.50; 100, \$10.00.

### BABY CHICKS.

25, \$6.00; 50, \$10.50; 100, \$20.00.

YESTERLAID EGGS FARMS CO., Dept. 5 Pacific, Missouri.

**THIS IS THE ALUMINUM "CONVENIENT" LEG BAND**  
Note the strong, secure fastener, so simple and complete—the number is not stamped in, but raised OUT—plain, readable—can't get full of dirt. Reaches you already bent in shape ready to put on—12 bands 20c; 30 for 45c; 60 for 75c; 100 for \$1.00. Sample Free—  
H. O. SHAW, Box 103, GRINNELL, IOWA

Let me tell you about these marvelous features and send you my Free Book describing my fixtures, how to remodel old incubators, build Peerless Incubators.

H. M. SHEER  
Dept. 13  
Quincy, Ill.

## CANDEE

## Floods Couldn't Stop the Candee Water Five Times Put Out the Heater Fire in an Ohio Operator's Incubator.

A 10,200-egg Candee Sectional Automatic

NEVERTHELESS, O. F. Goudy, Cottage Hill Farm, Ravenna, Ohio, took off 150 chicks from one 300-egg compartment. He writes under date of April 2nd, 1913:

"The eggs in this compartment were only tested once (35 taken out). We were bothered so with high water that it kept us busy to keep it down. The water got so high it put the fire out five times."

Here is a supreme test of incubator efficiency. The Candee is meeting every test and it is setting new records for hatching the strongest, healthiest chicks and ducks.

It is truly automatic in heat maintenance—nothing to do but tend the fire twice a day—and the uniform heat produces uniform chicks that come out as one operator says, "with a hop, skip and a jump."

If you would know more about this wonderful machine, write today for our free catalogue of Incubators and Brooding Systems.

### CHAMBERLAIN'S PERFECT CHICK FEED

The Only Original Dry Chick Feed and the World's Standard.  
 "Lady Showyou," winner of the National Egglaying Contest at Mountain Grove, Mo., with a record of 82 eggs in 82 days, and 281 eggs in a year, and recently sold for \$800, was raised on Chamberlain's Perfect Chick Feed.  
 We have agents all over the U. S., but if our agent is not near you, we can make you special delivery prices on 100 lb. lots, or more.  
**W. F. Chamberlain Feed Co., 358 N. Commercial St., St. Louis, Mo.**  
**HAS NO EQUAL-NO CORN-NO BOWEL TROUBLE**

## Count Them in the Fall

Profits depend on the number of chickens matured, not on the number hatched. What proportion can you bring through? Are you satisfied with the average results you secure each year? Just try the better way and experience the satisfaction of a highly successful season. It is easy! Secure from your dealer, or direct from us if necessary, these preparations:

- Pratts Baby Chick Food** 25c up
- Pratts White Diarrhea Remedy** 25c, 50c

This combination furnishes just what you need to grow the best chicks, and lots of them. It starts them right, strong, vigorous, husky, and keeps them free from the worst chick disease.  
 After the chicks reach three weeks of age, include in their ration a small amount of **Pratts Poultry Regulator**—25c, 50c, \$1; 25 pounds, \$2.50. This will keep them healthy and vigorous right up to maturity.  
 Chicken lice are comfort destroyers and stunt growth. An occasional dusting with **Pratts Powdered Lice Killer**—25c, 50c, will insure freedom from these trouble makers.  
 Use these products according to directions. You take no risk. Remember the unqualified Pratt guarantee: "Your money back if it fails."  
 Pratts 160-page poultry book 10c by mail. Get **Pratts Profit-sharing Booklet**. Our products are sold by dealers everywhere, or

# Amatite ROOFING

## It Takes The Pain Out Of Painting

IT'S certainly a painful process to keep on painting a roof every two or three years—you feel it in your back and in your pocketbook.  
**Amatite Roofing never needs painting**—sounds almost too good to be true, doesn't it.  
 Just lay it with an ordinary hammer, and you've solid roof comfort ahead for many years to come.  
 Costs less than similar roofings of same weight. The mineral surface is also fire-resisting.

*Sample showing the pitch waterproofing and real mineral surface free on request.*

**PARTRIDGE PLYMOUTH ROCKS**

**A Strain with a Reputation and Quality  
For Those Who Want the Best**

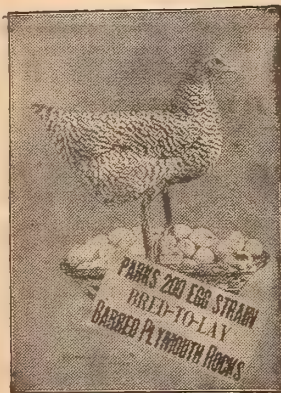

My twenty-page, handsome mating list, with colored cut, pricing eggs for hatching from twenty pens, will surprise you in elegance and prices of stock and eggs. It is mailed free to those who are seeking the best breed of the times, the best treatment, and reliable stock and eggs. My customers report winners, from my last season's eggs, all over the country. If you want to get in this class buy eggs or stock from Perkins.

My handsome thirty-six-page catalog and text book containing useful information, a colored cut of a pair of Perkins' Partridge Plymouth Rocks, mailed on receipt of twenty-five cents. It is worth the money.

You are losing time if you do not take up the Partridge Rocks. Will be glad to serve you.

**F. N. Perkins : 22 Harlem Ave. : Freeport, Ill.**

## PARKS' BRED-TO-LAY BARRED PLYMOUTH ROCKS

Won the golden egg cup in the last Missouri Laying Contest, while another customer won the silver cup in the great International Laying Contest, while our files show favor reports from over 600 customers in all parts of the world, showing that our strain are laying their way into universal popularity. And the above is part of our reward for over twenty years' breeding for a purpose "EGGS." While eggs are and always have been our first consideration, we have not overlooked the standard requirements as our 1913 winnings at Chicago, Pittsburg and Altoona show. Eggs are running well in fertility and one Philadelphia customer reports fifteen chicks from his setting and another customer, a Mr. Byrne, Rutland, Vt., writes that he tested his 111 selected eggs, and found only four infertile. EGGS—Selected, \$5 per 15, \$8 per 30, \$11 per 50, \$20 per 100. Incubator eggs, \$2 per 15, \$6 per 50, \$10 per 100. Eggs and best pedigreed stock half price after May 15th. Have a nice lot of chicks coming off each Monday, and can fill orders on short notice. Chick circular free. Chicks half price after June 1st. Large 36-page catalogue free. Mention American Poultry Journal when writing.

**J. W. Parks : Box J : Altoona, Pennsylvania**

## HALF PRICE . NOW IS THE TIME

**Louisville, Kentucky**

1st Pullet, Indiana State Fair, Sept., 1912

## ROSE COMB RHODE ISLAND REDS

Four firsts and twelve other ribbons at Boston and New York, 1912-13. Eggs from our best matings at half price after May 15th. Catalogue FREE. Satisfaction guaranteed.  
**PAYNE BROTHERS - Box J - PORTLAND, CONNECTICUT**

## If I Buy Baby Chicks Will They Mature Into Pullets Like These?

Will they grow into birds that I can feel proud of and that will lay Winter eggs in quantities, or win the blue ribbons for me, or will they be just scrubs that's the question before everyone who buys day-old chicks. It is not the first price that counts, but will they be right at maturity?

### Caldwell's White Plymouth Rock (Fishel Strain) "Baby Chicks of Quality"

#### From Utility Matings

Will mature into long backed, well made birds, pure white in color, that will be the secret of "Winter eggs." Every utility breeder is descended from known good layers that have been bred that way.

#### From Exhibition Matings

Will mature into blue ribbon winners. Every exhibition pen is made up of birds with good combs, of good type and chalk white in color, possessing the rich blood lines of generations of Fishel blue ribbon winners. Our birds were among the principal winners at the Indiana Fanciers' Show, Indianapolis, 1912.

Delivery of any number on short notice.

**R. C. Caldwell : Box 1021 : Lyndon, Ross County, Ohio**

### A New Catalog Is Now Ready

One of the finest ever issued by any breeder. It tells just how "Baby Chicks of Quality" are produced and describes every grade of stock that we have to sell with prices. A copy is ready for you.

### The Caldwell Selling Plan

Not only arranges for the man who orders in advance, but for the one in a hurry. Thousands of eggs are setting which will make possible

## IN ONE YEAR ON A TOWN LOT

is the title of a new book that we have just completed, and is the amount of money actually made in one year by H. Cecil Sheppard of Berea, Ohio, with his chickens, and he tells in a very comprehensive way just how he did it. Anyone can do the same thing if they pursue the same method as Mr. Sheppard did.

This book is printed on high-class enamel paper, is profusely illustrated, contains nearly 100 pages of reading matter; bound in cloth, and divided into nine chapters, as follows:

CHAPTER I—THE ROAD TO SUCCESS.....	11
Practical information—Selecting the breed—Start on small scale—Pigeons—Buy good stock to start with—At the poultry shows—Advertising pays well—Importance of advertising—Doubled my capacity each year—Selecting the variety—My actual experience step by step—Living on a town lot—A little paradise in five years.	
CHAPTER II—INCUBATORS AND BROODERS.....	19
Placing the eggs in the incubator—Importance of cooling the eggs—Running the incubator the right temperature—Keep the brooder clean—Preparing the brooder for the chicks.	
CHAPTER III—CARE OF CHICKS.....	23
Don't chill the young chicks—Right temperature the third and fourth weeks—Feeding the young chicks—Green food necessary for young chicks—Charcoal and grit important—Sprouted oats a great egg producer—Perfect winter quarters—Automatic feeders for growing stock—Don't force the breeders.	
CHAPTER IV—POULTRY HOUSES.....	31
Open air houses most satisfactory—Birds singing in zero weather—The ideal chicken park—The necessity of cleanliness—My first eggs four months—Imported the best stock obtainable—How I commenced advertising—My first order for hatching eggs—Chickens laying all fall and winter—Increasing advertising increases business—Good results at end of year.	
CHAPTER V—PLEASURE AND PROFIT.....	33
Sales \$9,515.00 sixth year—Gives up everything for chickens—A square deal for everybody—Building up a good character—The science of salesmanship—The four stages of salesmanship—Good stationery and catalog important—Found it necessary to move to a farm.	
CHAPTER VI—WHAT TO DO EACH MONTH OF THE YEAR.....	45
Care of young stock—Houses thoroughly cleaned and sprayed—Orders and shipments—How to ship the birds—Birds need extra care in November—Getting the birds ready for the show room.	
CHAPTER VII—MATING STOCK.....	51
The male is half the breeding pen—Catalog and mating list—shipment of eggs and baby chicks—How to ship baby chicks—A colony house from a piano box—June end of hatching season—The pleasant smile.	
CHAPTER VIII—THE AMERICAN QUEEN.....	59
Good time to get interested in poultry—Possibilities of the hen—Poultry business offers grand opportunities.	
CHAPTER IX—ORIGIN OF ANCONAS.....	63
Color of the Ancona—Shape—Habits—The fancier's fowl—As a utility fowl.

G. H. Kichline, Proprietor, Dept. A, New Washington, Ohio

### Buy Roofing For What It Protects

Let's have a little cold-blooded reasoning. You've got several thousand dollars' worth of perishable property under cover. A little dampness—a trickle of rain—might cost you more than the price of a dozen roofs. Same next year. In 20 years one good roof will protect a fortune. In one year a poor roof may destroy it.

Now—can a roof be too good? Is it a thing to bargain about—to buy with narrow-minded economy?

When you can secure for only a *little* more the absolute protection—the positive insurance—which NEPONSET Paroid Roofing gives, can you afford to experiment with cheap, bargain roofings?

# NEPONSET

## Waterproof Building Products

### Roofings

NEPONSET roofings are a fire protection, leak-proof and long lived. Any one can lay them. NEPONSET Paroid Roofing is for general use. NEPONSET Proslate Roofing is an ornamental roofing for dwellings. Attractive colors.

### Building Papers

If NEPONSET Waterproof Building Papers are built into walls and floors, the building will be warmer, will cost less to heat and will last years longer. Recommended by architects, engineers and building owners everywhere.

### Wall Board

NEPONSET Wall Board is a scientific product which takes the place of lath and plaster; comes in sheets 32 inches wide. Remember, it is the only wall board with waterproofed surfaces that requires no further decoration. Anyone can put it up.

Are you going to build? Write for valuable information about modern ways to waterproof and weatherproof. Send for samples, free booklet and name of nearest NEPONSET dealer.

CHICAGO SENSATION—First Prize Pen Cock, Chicago, 1910. Pronounced by Judges the Finest Male Bird Ever Bred.

## STANDARD LINE-BRED S. C. WHITE LEGHORNS

EXCLUSIVELY

### I HAVE THE CHICAGO WINNERS

Which have swept the platter clean the last four years and have won more prizes than all other exhibitors combined. My strain in customer's hands "like Parmenter and E. W. Grove" has won what few prizes I lost at Chicago, which proves that I sell you eggs and stock from my best birds. My most recent winnings were at the big Louisville, Ky., Dec. 23-28, 1912. The stronghold of the South, where I won. 1, 3, 4 cock; 1, 2, 3 hen; 1, 2, 3 cockerel; 1, 2, 5 pullet and 1 pen, in class of over 150 birds. The cream of the south. Every bird entered by me was placed.

### DON'T BE MISLED

And get your start from a bought reputation, but buy from a specialist who can prove conclusively by his winnings that he breeds the birds himself and knows the art of doing it. The Iowa, Oklahoma and Pennsylvania State Departments of Agriculture and United States Department of Agriculture are among my customers. They know where to buy the best grade of stock for demonstration and experimental purposes. I have plenty of "Stock Eggs" for "Hatching" and day-old "Chicks" to offer of the best quality I ever owned or saw. Write me your wants. Inclose 10 cents in stamps or coin for the original book of information on "Parkside Strain" of S. C. White Leghorns.

# Ferris Leghorns

at

## Summer Prices

**T**HE LAYING and exhibition qualities of Ferris Improved White Leghorns have been established by twelve years of careful breeding. We have used trapnests and bred from only our very best layers for so many years that every Ferris Leghorn now has laying qualities firmly established. There is only one way to develop laying qualities and that is by the use of trap nests. Every flock of birds that is not trapnested will be sure to contain a number of poor layers, and the stock raised from such flocks will always contain a number of birds that will not produce enough eggs to pay for their feed. By getting eggs or chicks from trapnested stock you can make sure that every bird you raise has the laying instinct bred in the bone and you will get so many more eggs from your fowls that you will make money at seasons when ordinary fowls will not even pay for the feed they consume.

At regular prices Ferris Improved White Leghorns are the best bargains that have ever been offered, and at May and June prices they afford an opportunity that you should not miss. To make room for the ten thousand chicks we are raising we offer thousands of pullets and hens and hundreds of cocks and cockerels bred direct from our exhibition and trapnested laying pens.

Utility pullets and hens \$2.00 each during May, \$1.75 each after June 1st; splendid foundation birds from our trapnested layers \$2.70 each during May, \$2.45 each after June 1st. These birds are just what you need for heavy egg production. Stock purchased now will give you chicks that will lay in December and that will lay during the balance of the winter. We also have some choice exhibition birds to spare that we have used in our exhibition matings—birds that will win in the strongest competition that you will encounter. Our catalog, a copy of which we will be glad to send you free of charge, describes these birds at greater length than is possible here. Send us a postal today and let us send the catalog.

Have you heard about the liberal guarantee we give with all stock purchased? We ship on approval, allowing you to return any birds that are not satisfactory; and we also assume the

responsibility of seeing that your birds remain in good condition until they become accustomed to changes of climate, feed and care. We replace free of charge any that die within thirty days, and we also allow you to exchange them if they become sick or do not breed properly. We endeavor to give every customer an absolutely square deal and fill your order with exactly as great care as if you were here to pick out the birds yourself.

### Eggs at Reduced Prices

Get our catalog and note the big reductions on eggs this month and next. The May prices of eggs from our bred to lay utility matings at \$1.75 per setting, \$8.00 per hundred or \$76 per thousand. From our trapnested laying pens, composed entirely of hens with records, of 185 or more eggs a year, \$3.30 per setting, \$16.00 per hundred or \$144 per thousand.

Eggs from all our pens, utility and trapnested, are carefully selected. They are large, smooth, even shaped—the kind that will produce strong chicks and the kind of eggs you will want to produce to get top market prices. We can ship safely anywhere in the United States or Canada, and have even shipped safely to Europe.

WE REPLACE ALL INFERTILE EGGS FREE OF CHARGE, and our stock is so handled that very few eggs are infertile.

June prices are lower than May prices—\$1.35 per setting, \$6.00 per 100, or \$57.00 per 1000 for the utility eggs and those from the trapnested matings cost only \$2.70 per setting, \$12.00 per 100 and \$108 per 1000.

### Chicks at Low Prices

We have incubator capacity for 25,000 eggs and can furnish 5000 chicks per week, so we can fill large or small orders on short notice. You will make no mistake to order chicks as this is one of the most satisfactory ways of getting a start with first class stock. We can ship safely anywhere east of the Rocky mountains and will guarantee safe arrival. The chicks will be hardy, vigorous fellows that will do just as well as if you had taken them direct from your own incubator.

During May the price of utility chicks is \$20.00 per 100 or \$180.00 per 1000; in lots of 25 to 50, 24c each. Trapnested chicks \$40.00 per 100, \$360 per 1000. In small lots, 48c each. June prices are considerably less—only \$16.00 per 100 or \$144 per 1000 for utility chicks and only \$32.00 per 100 or \$288 per 1000 for trapnested chicks.

### BIG FREE CATALOGUE

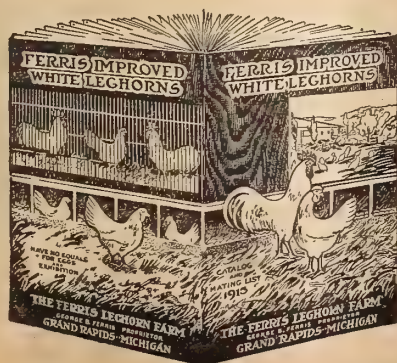

Write for a copy of our big 132 page catalog. We will be glad to send you a copy free of charge, because it will give you a lot of information about White Leghorns that it is impossible to give in the small space of this ad. Not only does it fully describe Ferris Improved White Leghorns, but it also tells you just how to feed for eggs, how to raise chicks, how to line breed your birds to increase egg production, and a hundred more valuable pointers that we have learned by twelve years experience. If you are in need of stock, eggs or chicks, write and let us tell you what we have and if you are not ready to buy, send for the catalog anyway. Just write your name on a postal and we will do the rest.

**GEORGE B. FERRIS**

*The Ferris Leghorn Farm*

## SMITH'S SINGLE COMB BUFF LEGHORNS

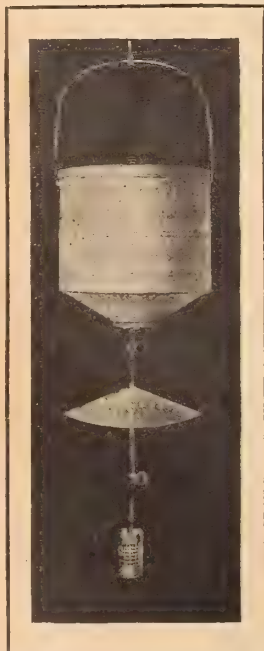

The largest Buff Breeder in the world and the world's best blue ribbon winners and winter egg layers. I have mated this year over 1,500 fine breeders that are the pick of over 47,000 birds raised in the last 4 years and winners from 13 of the big shows.

Stock for sale at all times, 1 bird or 1,000 birds. Eggs, \$2 per 15, \$10 per 100, \$75 per 1,000 and up. I have incubator capacity for over 10,000 eggs every 3 weeks, and expect to hatch over 40,000 day-old chicks this year from good, strong, big, vigorous birds that range in age from 1 to 4 years, and the chicks will live and grow fast. Day-old chicks, 25 for \$6.50 for \$11, \$20 per 100, \$180 per 1,000 and up. Get my guarantee on stock, chicks and eggs before you purchase your stock. Send 10 cents in stamps for catalogue and find out how to raise 150 pullets to the age of six months for 15½ cents each.

F. S. Smith, :: Life Member A. P. A. and Life Member American Buff Leghorn Club :: Box C and D, Hamilton, Ohio

# Simplicity Kant-Klog Feeder

Is the Only Poultry Feeder that Cannot Clog  
It is a Money-Making Investment—Not an Expense

IT WILL make money for you every day you use it, for it will save the grain that was formerly wasted, and grain is money nowadays.

IT WILL save you a lot of time, and time is money.

IT WILL increase your egg yield, and eggs are money.

IT WILL increase the fertility, hence you will produce more chicks, and chicks are money.

There are many more ways it makes you money explained in our free circular. Send for it.

That an Automatic Feeder is a "Good Thing," is an Undisputed Fact.  
If You Don't Believe It, Read These Testimonials:

Fenville, Mich., March 5, 1913.  
Simplex Supply House, Chicago, Ill.

Your feeders certainly are time-savers and a very great convenience. My flock of R. C. R. I. Red pullets that I am feeding with your feeder were all hatched between May 20 and June 10th, 1912, commenced laying in November, and your feeder was installed about December 15. In January, 1913, the 38 pullets laid 256 eggs; in February, 456 eggs, and so far this month are hitting a 60 per cent gait, which is evidence convincing to me at least that their feeding is about right. Shall want several more this spring to furnish a new house.

F. O. HOMEL.

Racine, Wis., March 5, 1913.  
Simplex Supply House, Chicago, Ill.

I beg to advise that your feeders have been most satisfactory. I have found them to be time-savers and of great benefit, as they give the chickens plenty of exercise in securing their feed. WM. H. ARMSTRONG.

Pittsburgh, Pa., March 10, 1913.  
Simplex Supply House, Chicago, Ill.

The Simplicity Automatic Feeder you shipped to me was received and I have had it in use for three weeks, and I am well pleased with it. It does good work and is a great saving in feed. I think it is a great exerciser and keeps the chickens working and laying.

FRANK BUTLER.

If you have a Feeder at all, you should have one that CANNOT CLOG. This is very important, for if a Feeder gets clogged and don't feed, it is worse than none at all, for your chickens go hungry.

Positively cannot clog; the little agitator stirs the grain all the time and prevents clogging. The Simplicity Kant-Klog Feeder is the only feeder that has an agitator.

It costs no more; in fact, is cheaper, and our prices are delivered prices, remember that, and it is sold on a positive money-back guarantee if you are not satisfied, which guarantee is endorsed by this paper. Send for circular giving full information.

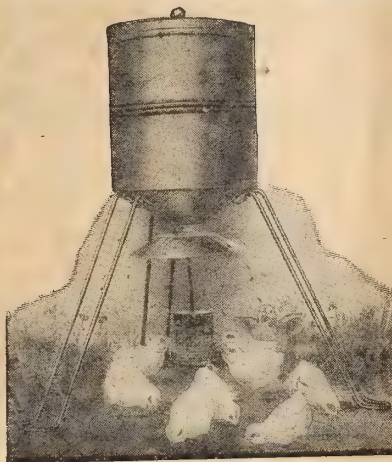

Prices Only \$1.25 to \$3.50, delivered (East of the Rockies.)

SIMPLEX SUPPLY HOUSE, PONTIACA BLDG., CHICAGO, ILLINOIS

# SAVE THE BABIES

## Use Simplicity Baby Chick Feeders

**It Saves Feed—It Saves Time  
It Saves the Lives of Your Chicks**

Your little chicks are always fed, and no feed is wasted. Neither is there any feed left laying around to get filthy and then eaten by the chicks, nor is there any feed in sight for the sparrows to eat. No need to depend on any one to feed your chicks, give them

**The Only Genuine**

**Accept No Other**

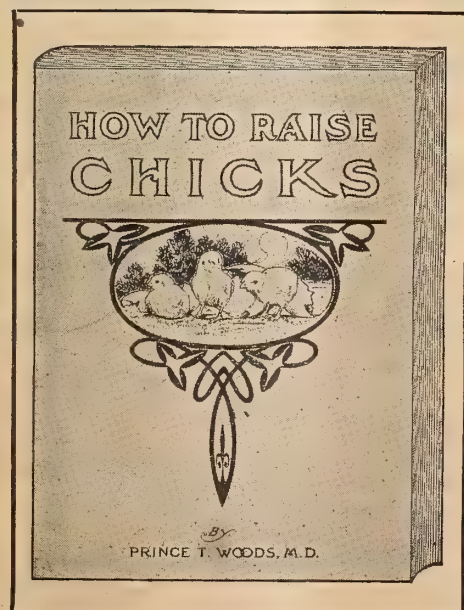

Filled with feed in the morning and they are fed for the day. It's "perfectly simple, simply perfect," and it "KANT-KLOG." By its use, you will produce larger and better broilers in less time and raise larger and better feathered show birds that will win the blue ribbons for you, because they were never stinted.

You need it; it will make your poultry business more pleasant and profitable by saving you time, feed and chicks. Send for literature, or order one now; your money back if you don't like it. For sale by poultry supply dealers.

**\$1.25 each, 6 for \$6.00 or \$11.00 a dozen, delivered**

**Simplex Supply House : Pontiac Building : Chicago, Illinois**

## DR. PRINCE T. WOODS' NEW BOOK How to Raise Chicks

### INCLUDING REVISION OF "FACTS ABOUT WHITE DIARRHOEA"

A down-to-date manual on breeding poultry, getting hatchable eggs, incubation and brooding both natural and artificial, preparing chick foods, feeding chicks, how to raise chicks and how to avoid and prevent disease and losses. Told in plain language. Illustrated with reproductions from photographs and pen drawings. Tells how to make your own brooders and chick foods. Written by a man who knows how and how to teach others. 88 pages, 35 illustrations and 5½x8 inches in size. Printed on good paper. Well and durably bound in cloth.

**A Book for Everybody Who Keeps Fowls or Grow Chickens  
Whether Beginner or Old Timer in the Field of Poultry Work**

**It has ten chapters:** Chapter I—Selecting and Mating Breeding Stock. Chapter II—Food, Vegetable, Animal and Mineral. Chapter III—Fowls and Food. Chapter IV—Care and Management of Breeders. Chapter V—Eggs for Hatching. Chapter VI—Incubation, Natural and Artificial. Chapter VII—Brooding with Hens and with Brooders. Chapter VIII—Chick Foods and Feeding Chicks. Chapter IX—Growing Chicks. Chapter X—Facts About White Diarrhoea. What white diarrhoea is. Symptoms of disease. Causes. Is there more than one form? Has germ of specific disease been found? Infection. Prevention. Treatment. Formula for a simple remedy which has proved effective in many cases in many climates for four years.

**Here is a book devoted to chick comfort and to more and better chicks, 75 cents per copy postpaid. Learn to save your chicks; that means more profit; Dr. Woods tells how; send for the book now, only 75 cents, cloth bound.**

75c per copy, postpaid; with American Poultry Journal, one year, only \$1.40. Canadian subscribers add 25c for postage, foreign 50c.

### ROOFING

#### Corrugated Steel Roofing 1 1/4c Per Square Foot

Here is the chance of a lifetime to buy the best roofing in the world, at a mere fraction of its real value. Our enormous buying power enabled us to pick up for spot cash a stock of this brand new, perfect corrugated, "V" crimped and Standing Seam Roofing and Brick Siding, at a tremendous sacrifice—way under what it is actually worth. Immediate cash needed made possible this purchase. Just another chapter added to the long list of our famous bargain sales.

#### Corrugated Steel Roofing Practically Indestructible

There is nothing else that compares with corrugated steel roofing for real protection. It makes a long, lasting roof. Is fire, rain, frost, wind, sun and lightning proof—warmer in winter—cooler in summer; and under ordinary circumstances does not leak, rot or warp, neither does it taint rain water. You can depend upon it that Corrugated Steel is the best material for roofing, siding and ceiling.

At 1 1/4c per square foot, we furnish our grade AB-700 Steel Roofing, in sheets 22 x 24 inches x 1/4 inches. This price is delivered on board cars at Chicago.

#### Galvanized Steel Roofing 2 3/4c Per Square Foot

Another big Steel Roofing Bargain. Several thousand squares of the very highest grade specially coated, corrugated, galvanized roofing and siding, made of specially prepared steel, of superior quality. Best roofing, and will last indefinitely. We will furnish it in suitable lengths for any purpose. Only a limited quantity on hand, so we urge you to send us your order immediately. Don't wait to write us again—order today, while this stock exists. Price only 2 3/4c per square foot, and will outlast 4 to 1. Just drop us a line, and tell us the size of your studding and general facts, and we will help you to select proper sheets. If you are not ready to use the material now, we will reserve it for future delivery, if you will give us a small deposit on account. This price of 2 3/4c per square foot is for our Lot AB-800 corrugated material, and is delivered on board cars at Chicago. If you prefer some other style, we will furnish it. We have this same grade in "V" crimped, Standing Seam and Brick Siding. Samples on application.

#### Ready Roofing With Supplies 62c Per 108 Square Feet

We have several thousand squares of a superior quality Ready Roofing, which we are offering in our AJAX BRAND, 1-ply, at a price of 62c per square of 108 square feet, including necessary cement and caps to lay it. This is undoubtedly the most remarkable bargain ever offered in Ready Roofing. This famous brand is put up 3 or 4 pieces to a roll. The price of 62c per square of 108 square feet is loaded on board cars at Chicago. We will, however, make a freight prepaid price on this same grade of roofing, including nails and necessary cement of 75c per roll of 108 square feet, and at this remarkably low price.

#### We Pay the Freight

Go full to any point east of Kansas and Nebraska and North of the Ohio River.  
We will also furnish 2-ply, at 90c; 3-ply, at \$1.05.  
This Ajax Roofing is guaranteed to wear as long, and give as good service as any Rubber Surface roofing on the market.

#### Send for Special Roofing Catalog and Samples

Write at once for our Special Roofing Catalog. Free samples and full instructions for laying roofing.

**CHICAGO HOUSE WRECKING CO. Dept. AH 8 Chicago**

### Smashing Bargains

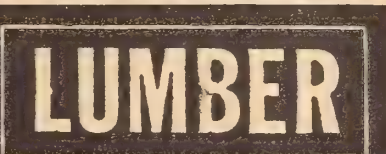

#### Explanation

The Chicago House Wrecking Company known to the commercial world as the "Great Price Wreckers" is easily acknowledged the bargain house of the earth.

Our Mammoth plant covers 40 acres, and our list of customers are numbered by the hundreds of thousands, and include people from every walk in life. We sell practically everything under the sun at unbeatable prices. We buy our goods at Forced Sales, taking advantage of Sheriffs, Manufacturers' and Auction Sales. In this way we can sell brand new, clean high-grade goods at prices, in many instances even less than the cost of manufacture.

#### Our Guarantee

Our capital stock is \$2,000,000. Any bank or Commercial Agency, or any publisher will confirm our responsibility. We have advertised in this paper for many years. Ask its publisher what he thinks of the Chicago House Wrecking Co.; get his personal opinion of the values, and our square methods of doing business. We guarantee each and every article that we sell to be exactly as per our representations. Should you buy anything from us that fails to come up to our representations, or does not agree with your expectations, we will take back such unsatisfactory merchandise at our freight expense. We want satisfied patrons.

Complete houses and barns at an enormous saving. Never before in the history of Building Material has such an opportunity existed. We offer high grade, brand new complete lumber and building material needed for the construction of houses and barns at lower prices than ever before.

#### 20,000,000 Ft. of New Lumber at Our Yards and Warehouses Ready for Quick Delivery

We have upwards of twenty million feet of first class, brand new lumber for the construction of buildings of every kind. A wonderful stock of the very finest millwork, interior trim, etc.—enough material to construct cities and villages everywhere. It is our determination to give the greatest "Banner" year in the history of our Great Lumber and Millwork department, and the way we will accomplish this, is by cutting prices that undersell any possible competition. The proof of this is in our catalog and literature.

Write today and tell us what you contemplate improving or building during this Spring—talk to us plainly, and we promise you the advice straight from the shoulder. No other concern in the world is equipped such as we are. Right in our main yard and warehouses, at Chicago, we can load you out complete, at one time, and in one carload, every single article required for the improvement of the building you have in mind. No where else can you go and get such service.

#### Personal Service To You

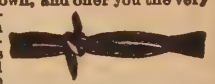

You can get the kind of service that will give you absolute satisfaction—satisfaction from the word "go." If you have ideas of your own as to the kind of building that you want, we will give you the benefit of the greatest architectural Department in the world. Will furnish you with plans according to your own ideas, and will quote you a price on the material that will make you a wonderful saving. Dollars saved are dollars earned.

Write today for our Book of Plans and Latest Catalog of Building Material and Supplies.

### FENCING

#### Brand New WIRE FENCING Less Than 1c Per Running Foot

Biggest of all offers of the past. We come to you with the most wonderful proposition ever known, and offer you the very best woven wire fencing at a fraction of its real value; lower in price than ever before, not withstanding that all other merchants and manufacturers have advanced their prices on fencing. We are determined to simply get all the business in sight, and with that in view, we bought up from manufacturer's sales, 150 carloads of High Grade Woven Wire Hog, Cattle, Field and Poultry Fencing, Barb Wire and Nails, in quantities sufficient to take care of our regular customers and those who will quickly respond to this advertisement.

#### Barb Wire Less Than 2c Per Rod

Galvanized, two-point Barb-Wire, full weight (not the light kind) put up regular on spools, containing about 100 lbs. to a spool. It is made of No. 12 1/2 wire, with good weight barbs. Price per 100 lbs. during this sale, only \$1.95. Order by Lot No. AB-600. Several thousand spools of this Barb Wire, Painted, price per 100 lbs. \$1.75. Order by Lot AB-500. Also have in stock 1000 spools of light weight, new galvanized barb wire, put up 30 rods to the spool, made of No. 14 galvanized wire. No. 15 barbs, barbs 5 inches apart; price per spool of 80 rods \$1.45. Lot AB-400. We also have several other bargains. You never had a chance like this before, and we advise that you send us your order today. Don't wait until the material is sold—we cannot hold this quotation open.

#### Galvanized Hog Fencing AT A MATERIAL! REDUCTION IN PRICE

100,000 rods of 26 in. Galvanized Steel Spring Wire, 26 in. high, hog fence, put up in 10, 20, 40 and 60 rod rolls, made with 7 bars, spaced 12 in. apart, with No. 9 top and bottom wires, No. 11 intermediate wires, heavier than the regular fencing offered. Price per rod, during this sale, only 15c. Order by Lot AB-900. Same fencing spaced 6 in. apart, per rod during this sale, only 21c. Order by Lot AB-1000. Other heights at proportionately low prices.

#### High Grade Poultry Fencing 48 in. High PER ROD 27c

A complete stock of all heights of Woven Wire Fencing for every purpose. Do not delay your order, but send it in as once, even if you are not ready to have it shipped. We will hold the material ready to deliver when you want it.

#### Several Carloads of Galvanized Wire Shorts

This is smooth wire, put up 100 lbs. to a coil, first-class for general use. Comes in sizes from 6 to 15 gauge. Price for 9 gauge, \$1.25 per 100 lbs. Lot AB-1200. Other sizes in proportion.

#### Some Big Bargains in Nails

At last we have the bargain of bargains. 10,000 kegs of genuine galvanized wire nails; will outlast all other kinds. Put up in regular kegs. Price per keg of 106 lbs., as follows:—

10 pennyweight, \$2.00 8 pennyweight, \$2.10  
6 pennyweight, \$2.15 Shingle Nails \$3.00

Also 5,000 kegs of Nails, mixed all kinds in a keg; good assortment, handy to have around your workshop. During this sale only, per 100 lbs., \$1.45. Order by Lot AB-1100. We have other bargains in Nails.

Also, in this same job, we have 5,000 kegs of Fence Staples, galvanized; per keg, \$2.00. Lot AB-1400.

Crimped wire for reinforcing, cut to any desired length; per 100 lbs., \$2.35. Lot AB-1300.

We have bargains in every line. Write us today for our Wire and Fence Catalog, but the best thing for you to do is to send your order now, and we will hold for shipping instructions.

BUYS

**THE GREATEST POULTRY BOOK EVER PUBLISHED**

**ORIGIN AND HISTORY OF ALL**

**BREEDS OF POULTRY**

**THIS BOOK** gives the origin and history of the Standard varieties of chickens, ducks, geese and turkeys; also a detailed description of color, shape, weight, etc. of Light and Dark Brahmas, the Cochins, Plymouth Rocks, Wyandottes, Leghorns, Dorkings, Orpingtons, Houdans, Creve Coeurs, La Fleche, Faverolles, Spanish, Minorcas, Anconas, Blue Andalusians, Hamburgs, R. I. Reds, Langshans, Polish, Games, Game and Ornamental Bantams, turkeys, geese and ducks. It also contains

**198 Pictures in Natural Colors**

drawn from life. The pictures alone are worth many times the price of the book.

This book also tells how to mate the different varieties for best results. In fact it is one of the most valuable books for both the amateur and the experienced poultryman. This book contains 64 large pages (9x12) of solid reading matter, besides the colored plates. It is neatly bound with paper cover. It should be in every poultryman's library. Send for a copy today, direct to the publishers.

**AMERICAN POULTRY JOURNAL PUB. CO., 542 SOUTH DEARBORN ST., CHICAGO, ILL.**  
SEE OUR CUT PRICE ON BOOKS ELSEWHERE IN THIS ISSUE

# AMERICAN POULTRY JOURNAL YEAR BOOK FOR 1913

**Being a Comprehensive and Authenatic Review of the Poultry Industry for the Year 1912—All Thoroughly and Carefully Indexed for Instant Reference. Including a Practical Encyclopaedia on Poultry Culture.**

## PUBLISHERS' ANNOUNCEMENT.

With the event of a billion dollar poultry industry in the United States, the publishers of the American Poultry Journal think it about time that a reliable and authentic Year Book or Annual should be published in this country. Many smaller industries—some of them many times smaller—have one or more Year Books published in their interests and these industries liberally support and encourage their publication and sale, as it has been found that the circulation of such books tends to create new interest and promotes its advancement before the general public.

It is the intention of the publishers to issue a Year Book annually for the great and growing poultry industry of this country, and we feel confident that it will be well received, as it will fill a real need that should have been attended to many years ago, and the entire editorial staff of the American Poultry Journal will devote its best efforts to make it worthy of a place in every poultryman's library. With such an organization of experts behind it—with the equipment in materials, statistics, trained clerical force, books, artists, practical and expert writers—must, in the very nature of things, produce a book that will fully and truthfully represent our great billion dollar industry.

## SOME PROPOSED FEATURES.

**OUR CONTRIBUTING EDITORS.**—The entire editorial staff—conceded to be the best staff of poultry editors connected with any poultry paper—will lend a helping hand in the completion of the Year Book, and it goes without saying that such a brilliant aggregation of poultry experts will produce a Year Book of inestimable value.

**THE POULTRYMAN'S ENCYCLOPEDIA.**—Will be composed of about 300 questions and answers, with complete definitions of all the technical words and terms used in the poultry industry. Edited by Dr. Prince T. Woods, with the assistance of the entire editorial staff. This feature will be a great help to the amateur and professional breeder.

**FEEDING FORMULAS.**—All the new and best feeding formulas that appeared in 1912 will be published. This feature will cover the entire subject of feeding poultry for all purposes including winter egg production, feeding for the show room, for the market, young chicks, crate feeding, cramming, etc., by the best experts in this country and Europe.

**DIRECTORY OF EXPERIMENTAL STATIONS.**—Will contain a complete list of all the poultry experimental stations of this country with names of managers, who supports them and what they accomplished during 1912, and interesting and instructive articles by their managers will be in the great American Poultry Journal Year Book for 1913.

**POULTRYMAN'S CALENDAR.**—What to do each month in the poultry yard, conducted by Mr. Prince T. Woods, managing editor of the American Poultry Journal. This will be a thorough and practical treatise on raising chickens and will tell in plain words just what to do each month of the year. This one feature, compiled and edited by the best practical expert in this country, will be invaluable to both the amateur and old-time breeder.

**SPECIALTY CLUB DIRECTORY.**—Will be a complete directory of all the specialty clubs in America, all arranged under the different breeds and will contain the names and addresses of the officers, number of members, initiation fee and annual dues; special prizes given and where in 1912.

**POULTRY SHOW DIRECTORY.**—Will be one of the most valuable features of the book to the fancier, as all poultry shows held during the season of 1911-1912 having 2,000 or more entries will be reported in full. First, second and third prizes won, with names of winner, judges making the awards, number of entries in class, date and where show was held; name and address of secretary, entry fees for different classes, date of next show, and all arranged and indexed for

ready and instant reference. All shows having 1,000 to 2,000 entries during 1911-1912 will be reported as follows: Winners of first prizes, name of judges making the awards, date of show and place where held, number of entries in each class, date of next show, entry fees for different classes, whether exhibition coops are provided by the show management or must be provided by the exhibitor, name and address of secretary. All shows having less than 1,000 entries will be reported as follows: Total number of entries, date and where held, entry fees, who furnishes the exhibition coops, name and address of secretary, date of next show.

**SPECIAL ARTICLES.**—Many special articles will be published, written by the best experts in this country and Europe, such as the newest ideas on poultry house construction, how to prepare birds for the show room, the double mating system, single mating system, how to line breed, how to operate incubators and brooders, fattening and preparation of fowls for the market, how to operate back yard poultry plants, how to operate large commercial poultry plants, how to advertise fancy and market poultry, how to produce eggs throughout the year, and many others too numerous to mention.

**POULTRY JUDGES' DIRECTORY.**—A complete directory of all licensed and unlicensed poultry judges of this country, with postal address—breeds they are specialists in judging, poultry papers they are associated with, leading shows they have judged, and other information regarding them will be given in full.

**HANDSOMELY ILLUSTRATED.**—The publishers of the Year Book will endeavor to make it the handsomest and most artistically illustrated poultry book ever published. Many full page four-color illustrations and full page one-color plates will be used. It will also be profusely illustrated with smaller cuts showing all kinds of poultry appliances and diagrams of different articles described in the text. No expense or pains will be spared to make this feature the best of any book ever published.

**THOROUGHLY INDEXED.**—One of the most valuable features of the Year Book will be the thorough manner in which it will be indexed under main and sub-titles, and sometimes cross indexed. This feature will make it a ready reference library of all the important events in poultrydom that transpired during the year 1912. This feature will also possess a historical value that cannot be estimated at the present time. Suppose that ten or twenty years from now you wished to find out what were the total number of birds on exhibition at the Madison Square, or any other show, held during 1912, and who were the winners and judges, or what a certain egg laying contest did, or what was the best treatment for any certain poultry disease, or what the experimental stations were doing in 1912, or wanted some statistical information on any subject relating to the poultry industry in 1912, you would just go to your library and get the American Poultry Journal Year Book for 1913, would turn to the index on any of these subjects and the information would be right in your hand. And remember it is the intention of the publishers to issue a similar Year Book each year. It is unnecessary to say that such a historical record of each succeeding year will be worth preserving for the generations yet to come.

**PRINTING AND BINDING.**—The book will be published in the convenient size of 5½x8 inches and will be printed on high grade book paper suitable for printing fine halftone illustrations in the best manner possible. The cover will be an artistic and original design, and the binding will be linen thread sewed to make it flat opening. There will be nothing cheap or trashy about the book, as it is the intention of the publishers to make it a representative of the best present day standard of artistic printing and worthy to be handed down to posterity as an example of what the best printer could produce in the year of 1912-1913.

The American Poultry Journal Year Book will contain between 400 and 500 pages and the prices will be \$1 for handsome cloth bound de luxe edition, and 50c for paper cover edition

## Special Combination Offer

Paper Bound Edition of the "Year Book," and a full year's subscription to American Poultry Journal for only \$1.25, or CLOTH BOUND EDITION and one full year's subscription for only \$1.50. For Canadian subscriptions add 25 cents a year for postage, foreign subscriptions add 50 cents.

American Poultry Journal, 542 So. Dearborn St., Chicago, Ill.

# YOU SHOULD WORRY ABOUT PLACING YOUR ORDER FOR HATCHING EGGS

Our birds have won in almost every important show in this country and Canada for our customers. They have won 35 firsts, 22 thirds, 18 fourths, 16 fifths and almost 100 cups, specials, etc., in the last three years at Grand Central Palace, New York, Boston and Philadelphia for us. They can win for you. Our record for 1912 has never been approached by any White Leghorn breeder at the big shows. Our winnings are as follows:

### At the Great Hagerstown Fair, October, 1912

Cocks, 1 and 4; Hens, 1; Cockerels, 2, 3 and 5; Pullets, 1, 2 and 3; Pens, Old, 1; Pens, Young, 1; Specials for Best Leghorn Male and special for best bird in the Mediterranean classes and best display.

### At Grand Central Palace, New York

Cocks, 1, 2, 3, 4, 6 and 7; Hens, 1, 2, 3, 4, 5, 6; Cockerels, 1, 2, 3, 4, 5; Pullets, 1, 2, 3, 5, 6, 7; Pens, 2, 3, 4; Specials for best head Male and Female, best color Male and Female, best shape Female, best display, and Gold Special for best display of any variety in the show. This win was made in competition with eighteen of our best breeders.

### At the Boston Show, Boston, Mass.

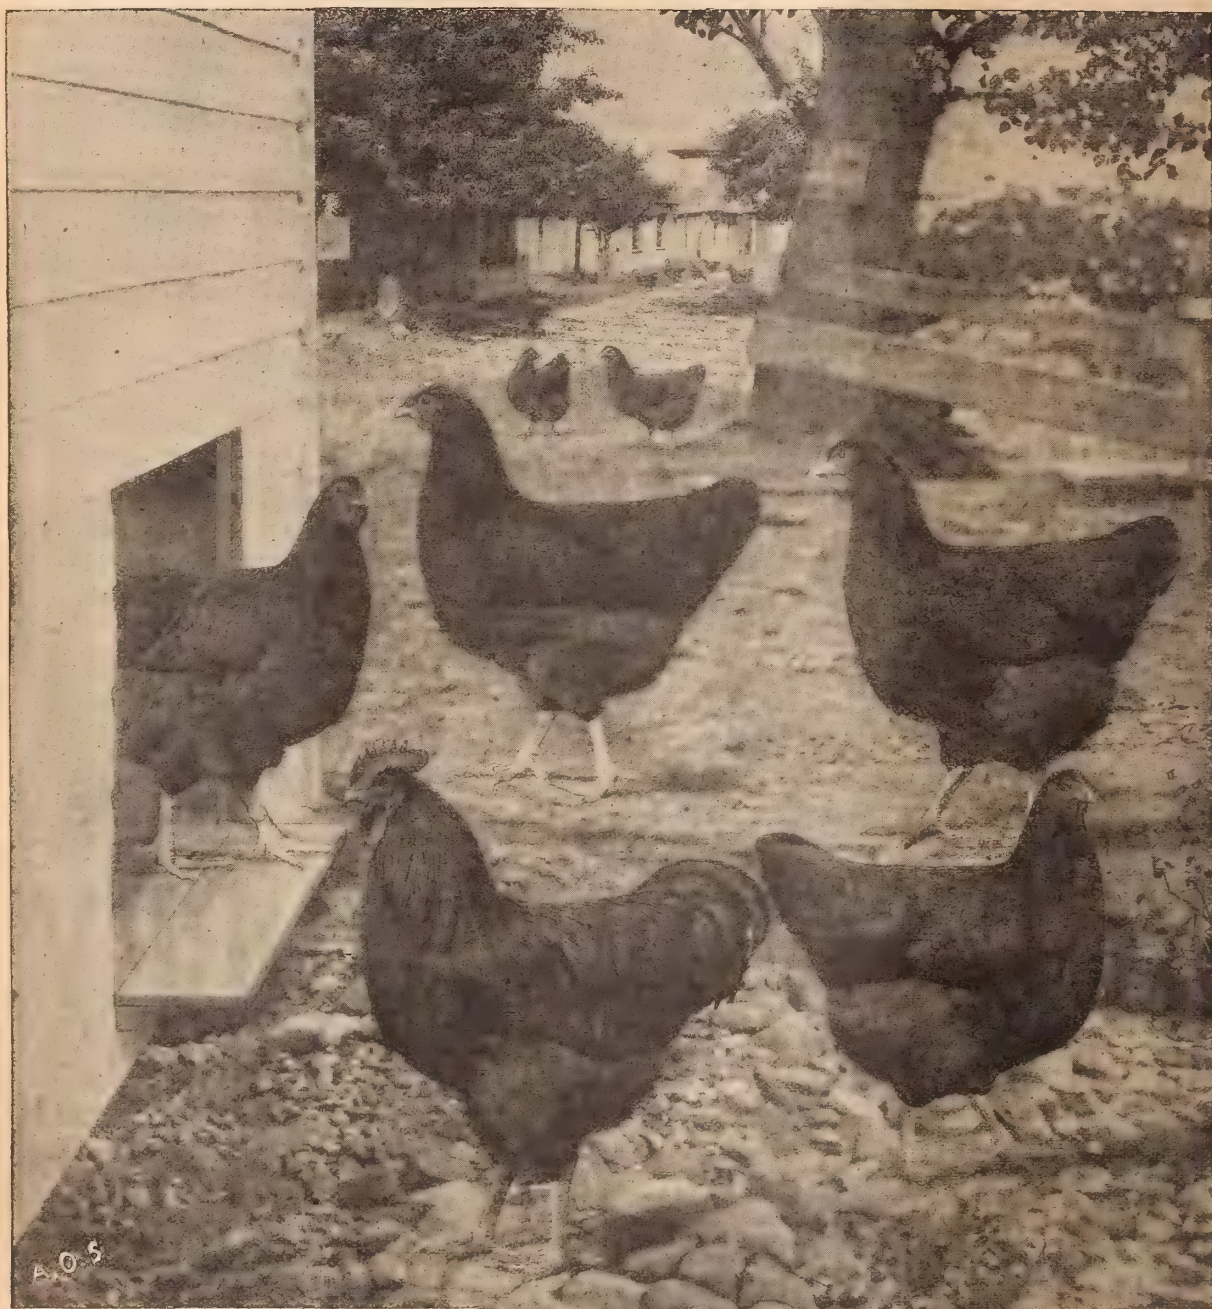

Cocks, 1, 2; Hens, 1, 3, 6; Cockerels, 1, 2, 3, 4; Pullets, 1, 3, 6; Pen, 3; Specials for best Display, best Male, best Female, best color Male and Female, best shape Male and Female, best head Male and Female, and Special for best bird in the Mediterranean classes. This win made in competition with fifteen other breeders, in the largest show ever held in the United States.

We can supply hatching eggs at 60 cents each from our very best pens. (The same ones we hatch our own winners from). 35c and 20c each, or \$15 per 100 from other good matings. Buy from the breeder that produces the goods. "Actions speak louder than words." Send for mating list, mentioning American Poultry Journal.

*FIRST PRIZE PEN YOUNG  
SINGLE COMB RHODE ISLAND REDS  
CHICAGO SHOW DEC. 1912  
BRED AND OWNED BY,*

*F. E. HARRISON  
MENOMINEE MICH.*

The Rhode Island Reds have grown in popularity each year until today we find them among the largest and strongest classes at shows throughout the country. The Chicago Show brought out a wonderful exhibit in which the quality was much above the average, and to win a ribbon in the Red classes here, it required absolutely the finest specimens. Among the successful exhibitors was F. E. Harrison, showing his "Royal Red Strain," who captured the bulk of the prizes and also best display. The pen shown in above picture won first prize and were among the chief attractions, which also included first, second and third pullet and first prize cock. The pullets in this pen are bred from a son of "Royal Red," the famous winner, and are not related to first and third pullets at Chicago, 1913, but are full sisters to first prize pullet at Indianapolis this season. Mr. F. E. Harrison's "Royal Red Strain" have surely made a wonderful record during the past winter and the coming breeding season will no doubt bring forth another generation of blue blooded stock which will be counted among the choicest specimens for the next show season.—A. O. Schilling.

## To the Rescue of the Barred Rocks

Written by L. P. Upham, Webster, Mass., Son of the Originator  
of the Grand Old Barred Plymouth Rocks

**T**HE light of criticism is beginning to pierce the darkness that has surrounded the Barred Plymouth Rock in more recent years, and public opinion once aroused, will dispel the cloud that has been threatening disaster to the breed which has so long maintained the position of being the most popular fowl yet produced.

For a year and more I have been sounding the warning that the old Barred Rock ship was sailing dangerously near the shoals, and if the same crew are to remain in charge, the rocks are only just ahead. Is it not time use was made of the searchlight that the course of the ship may be changed, and the grand old craft saved?

The disposition among some breeders seems to have been to create something new, regardless of whether any improvement was made or not, and have disregarded standard requirements entirely. The efforts of these breeders should never have met with any encouragement from the judges, and the judges are responsible in a great measure for the conditions that now confront us, for had they ignored the type of Barred Plymouth Rocks that these curiosity seeking breeders were trying to produce, as they are now ignoring the standard requirements, we never would have had the undesirable product forced upon us that we have today. Undesirable as regards standard requirements. The cry of "we are running on the rocks" has not been sounded any too soon if we would save the grand old ship of state (the Barred Plymouth Rock). We are encouraged in our efforts by many letters from prominent breeders endorsing our views, and we note with especial interest several breeders are making use of the poultry journals to express their convictions. Poultry editors are awakening to the fact that an injustice has been done the GRAND OLD BREED, and that its beauty has been lessened by these curiosity breeders. Then just to help matters along the question of double or single mating is being agitated. Every scientific breeder knows that to trifle with nature is a serious mistake. He who antagonizes nature pays dearly for the experience. Some breeders suggest two standards for Barred Plymouth Rocks. Why is there any more need of the two standards for Barred Plymouth Rocks than there is for Light Brahmas, or any other breed in fact?

Take the standard of the Light Brahma, for instance; it describes the male, and also describes the female. Does not the standard of the Barred Plymouth Rock describe the male, and also the female? Then why is there not just as much sense in asking for two standards for the Light Brahma? But there is no sense in the two standard proposition whatever. Then there is the single mating advocate, who wants the standard changed so as to conform to his single mating product; that is, the standard shall call for a male three or four shades lighter than the female, as this is what a single mating will produce. My dear reader, just as soon as you adopt a single mating standard, just so soon you sound the death knell of the grand old breed.

Instead of trying to breed a little nearer, and nearer to perfection, a little nearer to the standard of excellence, you want to pull the standard down to your level. Could there be

anything any more unprogressive? Clear your vision, look for higher things. Perfection is the prize we seek, and let us keep the standard high, the harder to attain the more valued the prize. All varieties of fowls are more or less afflicted with parasites of different natures, and while the Barred Plymouth Rock is a subject of these pests, it has an additional annoyance in the many barred bug, and it works to the greatest annoyance and disadvantage to the breed under the surface. In the case of poultry vermin in general, usually a thorough application of Lambert's Death to Lice, or some good insect powder is effectual. In the case of the many bar undercolor bug, we believe a thorough application of the powder of common sense will exterminate the creature. Common sense is a most valuable asset in all things, and when made use of, harmony and success is the result. Has the many bar undercolor bug bestowed any quality of value on the GRAND OLD BREED? Has he? has he added to its beauty by putting more bars on a feather and making the dark bar twice as wide as the light bar? Has he? The public say no. Are they not the natural judges? Do they insist on an under color barred to the skin? No, they do not. A beautiful evenly barred surface satisfies them. When they buy a pair of horses, do they ask to see the undercolor? No, they do not. And if they did ask such a question, do you think they would find it the same shade in a pair of bays as is the surface color? Do they when they go to their tailor tear their suit pattern to pieces to see the color of the warp and filling? No they look at the surface only. When they see a fine looking man on the street, do they form an opinion from other than surface observations? No, they do not.

Go with me a minute to Madison Square Garden show. Jones has quite a string of birds there, and he is an undercolor crank. The elite of the city are visitors. Mind you, Jones' valued quality (undercolor) is out of sight, of course he wants the public to see his pet hobby. Can you imagine that poor man running from cage to cage, hauling out his birds, tearing open the feathers to show bars to the skin? Think of him showing all the specimens in his breeding pens, think of the congested alleys he makes, and how much time he consumes over a matter the public care nothing about, and think of poor Jones at night about dead, and were he (Jones) to be judged as regards his undercolor, we fear there would not be found a dry thread in his undercolor (underwear). There is just as much sense judging him by his underwear, as to judge his birds by their undercolor. While the above illustration may seem a little homely, it answers the purpose of showing how ridiculous this hue and cry about undercolor is.

Go with me, if you please, to a breeder's yard, and here we find a beautiful pen of exhibition females, bright, snappy, and blue barred, the light and dark bars are of equal width, giving these females a very bright clean look. They are of good size, and symmetrically built, yellow beaks and legs, red eyes and are a feast for the true fancier's eye. Is there anything more to be desired? And so with the male, breed him with bars of equal and medium width, make the bars as straight across the feather as possible, clean, snappy and blue, and pay very particular attention to shape; then give him some rich colored yellow legs and beak, and a red eye, with medium size comb; such a male will be two shades

"No the eggs bought it."

lighter than the dark muddy appearing product of today, and have you not in the male I have described, a specimen that the whole world will look upon with satisfaction and admiration? I am asked would I abolish undercolor altogether? I reply, not necessarily. I would make the most attractive surface color possible by requiring the bars both dark and light to be of equal width, and I have reason to believe with such a surface color there would be a correspondingly bright undercolor, but, be that as it may, to produce a brilliant surface color is our aim first and always, and if the undercolor happens to be barred, well and good, we have not the slightest objection. But we do protest most emphatically against judges giving so much value to undercolor, when surface color is the quality of value. Now that a skirmish line has been formed, I hope breeders will exhaust their ammunition in expressing their views on this important matter as concerns the GRAND OLD BREED. See to it, my fellow breeders, see to it that our Barred Plymouth Rock is saved from the rock, and with the searchlight of progressiveness to light our future course, the GRAND OLD BREED will experience smooth sailing, and maintain its popularity so many years enjoyed.

### MOVING PICTURES TEACH POULTRY HUSBANDRY

Oregon Agricultural College Demonstrates the Possibilities of the "Movies" in Poultry Educational Work. By Prof. James Dryden, Corvallis, Ore.

MOVING PICTURE FILM about fifteen hundred feet long, teaching lessons in poultry keeping, was made at the Oregon Agricultural College in September, 1912. It was first shown at the State Fair, where continuous exhibitions were given in a large auditorium every day during the week. It was a humble story of chickens, yet the crowds went day after day to see the show, then came back again to see it again until it was the talk of the fair. It was a course in poultry husbandry, and no text book in half a week's study would help the poultry industry so much as this half hour's course in motion poultry husbandry. The possibilities of moving pictures in

poultry educational work were fully demonstrated.

Since then and during most of the winter the film has been in use. It has been impossible to fill all the demands for it. There have been requests for it from a number of eastern and western states which it has been impossible to grant at present owing to the demand for it at home. During the past winter the writer used it in a four weeks' lecture trip over the state of Oregon. The pictures were shown and poultry talks given every day, sometimes twice a day, in the moving picture theaters, with an average attendance of about 400 persons. In places it was impossible to get all the people into the halls.

#### A Moving Egg Story With a Lesson.

Though the peoples of the civilized nations are eating about a billion dollars' worth of eggs a year, the business of producing the eggs is a neglected rural pursuit. The film explains that farmer John has no use for chickens. He sickens the dog on them and forbids wheat being fed to them, but where there's a will and an apron there's a way. The chickens get wheat and the wife gets eggs and he doesn't know it. A typical farmer of this class is seen coming out on the back porch lighting his pipe. He picks up a halter to go to the pasture to get the horses when he spies a chicken near the doorsteps looking for table scraps. He calls the dog, which immediately appears and puts the chicken to flight, then conscious of having done his duty or upheld his dignity he saunters off with the halter over his back. At the same time the wife hurries out of the door holding a broom aloft to undo the wrong of the husband and protect the hen. She chases the dog off. And thus we have a love scene—the love of the wife for the chicken—and very few moving picture films have been licensed without love scenes. The poultry film, therefore, starts out in an orthodox way, without the love, however, being lavished on a worthless man.

The wife then seizes the opportunity to smuggle an apron-full of wheat from the granary, and by the time John returns from the pasture field with the horse, she is wielding the broom vigorously from the porch and porch steps, and the

chickens having finished their meal, John gets no inkling that his grain bin has been rifled.

This may be neither good morals nor good business, but it would be interesting to know how much the great poultry industry owes to the farmer's wife's thrift, and how much it loses through the neglect of the farmer.

John, of course, must go to town occasionally to meet his fellows on the street corners and keep adrift of the times. The film shows him hitching up his horse when his wife approaches him timidly and says, "Please may I go along?" He grants permission somewhat grudgingly. She borrows half a dollar from him for spending money, then goes and fixes herself up and when John has his back turned, giving instructions to Billy to hoe the corn, she hides a basket of eggs under the seat. She then jumps into the buggy and they ride off to town.

The hens are neglected by the farmer, but they are nevertheless doing a great deal for him. The film shows them returning from town and Mary spreads her purchases on the table. When John walks in he looks amazed at the parcels and says, "Did you buy all that with half a dollar?" There are groceries for the family; a new hat for Mary; socks and tobacco for John; shoes for Billy, etc. Then Mary gives away the secret that the hens did it all, and she shows him the following statement showing what the 36 hens did during the year, and John's wonder grows:

**Bought of Smith's General Store.**

Groceries .....	\$24.50
Shoes .....	12.50
Drygoods .....	13.00
Socks for John.....	1.17
Tobacco .....	8.25
Spring hat for wife.....	3.25
Calico apron .....	.25
School books .....	5.00

Total .....	\$67.92
Sold 300 dozen eggs.....	75.00

Here is an awakening in a hardened soul and Mary evinces great joy. Then to complete John's conversion Mary shows him an Oregon Agricultural College poultry bulletin. John looks it over earnestly; then he calls in his son, Billy, hands him a new pair of shoes and shows him what mother had done with the hens. Then he calls his attention to something in the bulletin. Billy slips out and brings in a surprised hen. John fondles it in his arms and there is general rejoicing when some one says, "Hurrah! for the hen; may her son never set."

"No more sicking the dog on the hens;  
No more stealing the wheat.  
A feed bucket replaces the apron;  
A colony house is built;  
Clean ground is furnished;  
100 good hens are kept—and  
Billy tends school and the chickens."

The film then shows that neglect has given place to system. John and Billy have taken the burden off the wife's shoulders. They start in poultry keeping in an approved way. Dirty yards and tumble-down coops have given place to modern houses and clean yards. Billy has turned carpenter and he and his father are shown nailing on the siding of a colony house. Next we see the completed house and a team of Percherons hauling it off on to clean ground. Billy tends school and the chickens. One hundred hens is the unit set for farm poultry keeping. Billy, therefore, has two colony houses and 100 hens. "HE FEEDS THEM EACH DAY:

Bran ..... 7 lbs.

Middlings ..... 3 lbs.

Mixes it with buttermilk and feeds it in the morning.

For green food he hangs up kale.

Feeds wheat and some oats after school.

Beef scrap, or buttermilk all the time.

Then keeps them busy."

He is shown mixing the mash in the morning, measuring out the different parts and mixing it with buttermilk. Next he is shown feeding the chickens the mash in feed hoppers, and the fowls evidently have good appetites for breakfast.

Then he brings them a head of kale, weighing about 15 pounds, hangs it up on the side of the house and the importance of green food is thus taught, also the importance of sanitary methods of feeding it.

Billy then goes to school. The next view shows him returning from school with his school books strapped on his back. Then he dons his working clothes and feeds the chickens wheat. This is scattered in clean straw and an exciting game of chicken football begins. The film explains that "The hen will raise the mortgage if you will let her scratch." From the way they are scratching on the film it

Photo 6. Starting in a better way.

Photo 7. Moving the poultry house.

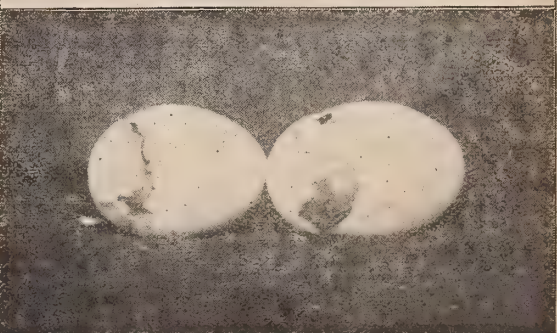

Photo 10. The crack in the egg shell grows gradually larger.

Photo 11. The chick forces his head out and rests a moment.

Photo 12. Almost free from the prison shell.

Photo 13. "Just out" - An attractive feature of the film.

Photo 14. Billy has a hatful of eggs from a stolen nest.

Photo 15. The broody hen sits on them a while.

looks as though they were trying to raise several mortgages.

The film has thus shown methods of housing and methods of feeding. It then shows methods of hatching and raising the chicks. The point is made that all the equipment needed for farm poultry keeping where the farmer keeps 100 laying hens, is two colony houses with four hatching and brooding coops. These coops are then shown with Billy placing eggs in the nests and then putting the sitting hens on them.

Probably the most striking feature of the film then follows. The explanation is given that: "The chicks begin to hatch." Two eggs are shown and two small cracks in each appear. The chick is breaking the shell. The break becomes gradually larger and larger as the chick struggles to free itself. Finally one breaks the end of the shell off and its head appears. The other one has a little harder struggle, but is making progress. A few violent kicks and the first one throws its head and neck completely into view, laying its head down flat and rests a moment to gain further strength, then renews the attack, finally breaking through its prison walls by the time the second chick is about half way through the shell. The film finally shows two happy, fully developed, dry, fluffy chicks standing beside the discarded shells, taking their first view of outdoor life. They evince their pleasure in the outcome by running around and exercising themselves, to the delight of the audience.

Immediately there is run off on the reel a most realistic view of 100 chicks just hatched in the incubator. The whole bunch is in motion and the effect is most striking. This completes the first feature of the film, which may be called the old and new way of poultry keeping.

#### Marketing.

The moving picture machine then takes up the subject of handling and marketing eggs. It is estimated that about \$50,000,000 a year are lost to the producers of the United States on eggs, through methods that injure their quality and selling value. Two or three things are portrayed on the film that are responsible for a large part of this loss.

A few years ago, or to be more accurate, two or three thousand years ago, hen eggs had no market value. Biddy was then a wild denizen of the jungle. She laid eggs for the purpose of hatching chicks out of them, or, in other words, for reproducing her kind, and not for the purpose of reducing the high cost of living. The ancients didn't eat eggs and they didn't know what they were missing. Finally one year the crops failed and there was famine in the land. A farmer found a stolen nest (they were all stolen then, and the trait of stealing her nest has not yet been bred out of the hen). The farmer was going to see if those eggs would preserve his life a few days longer. He proceeded to break into an egg and it proceeded to break out upon him and the smell of it very nearly ended his flickering life then and there. No eggs for him. He preferred to die of starvation, and he did.

A century or two later another farmer was in dire need of something to eat. He found a fresh-laid egg. He tried it on the dog first and it didn't kill him; then he ate one himself, and, behold, it was good! And instead of porterhouse steak at starvation prices he robbed the hen's nest and defied the high cost of living and the beef trust. That was the beginning of our billion-dollar egg industry. One man got a bad egg from the stolen nest or broody hen and wouldn't eat any more. The other man got a good egg and demanded more of them. The stolen nest and the broody hen have come down to us from the ancients, and we have the rotten egg and stale egg problem with lessened consumption. If we can abolish the stolen nest and relegate the broody hen to her proper sphere, there will be a demand for millions of dollars' worth of eggs more than are now eaten.

The results from poor handling of the eggs and poor marketing methods are vividly portrayed on the film. Dickey is playing around the barn, when he hears a cackle, and turning around sees a hen run from under the barn. This gives him an idea and he hurriedly crawls under the barn. He comes out with a smile on his face and a hat-full of eggs, and runs with them to his mamma. His mamma is exceedingly pleased and the boy hurries off to repeat the performance. Next we see him fighting with a broody hen on the nest. The hen fights hard and pecks at him and looks like the proverbial wet hen. The boy is evidently scared, but he watches his chances and finally secures another hat-full of eggs and runs in great glee to his mother, who praises him. As the mother enters the house the boy picks up an egg from the porch steps which had dropped from the hat. He throws it quickly down, however, and holds his nose.

The next scene shows the farmer and his wife starting off to town, eight miles distant, with a case of eggs. It is 104° in the shade and no shade for the eggs. The eggs are shown in the back of the buggy with the hot sun beating upon

them. Hatching temperature is 103° and incubation will start at lower temperatures. By the time they get to town, of course, incubation has started in the eggs. Then the film explains that:

"Before the eggs reach the consumer the broody hen sits on them a while, the sun incubates them a while, the railroad rides on them a while, the city storekeeper broods over them a while, and the consumer raves over them for quite a while."

Next we see a city consumer at the breakfast table. His wife brings him a couple of boiled eggs to eat. When he breaks the first egg the contents, which are of a black color, run out into his plate. He looks disgusted and raves about the egg, and his wife holds a handkerchief to her nose and cries. No more eggs for him. The farmer has lost a customer. Thus the producer shows his love for his best friend, the consumer, and the consumption of eggs is curtailed.

A valuable lesson is then given on quality of chicken meat. The farmer is told that the old hen is not profitable.

"A Good Lesson."

"Kill off the old hens that have lost their teeth. They are not good layers.

Neither are the old hens good for the consumer.'"—College Bulletin.

The farmer is therefore not treating either himself or the consumer right by keeping the hens too long. Acting on this advice, the farmer is shown in action culling out the old hens. Those without teeth he puts in a crate and ships to market. Then the consumer is shown sitting down to dinner with a good appetite and a pleased expression as a roast

First R. C. Black Minorca cockerel, club show, Boston, Mass., January, 1913. Bred and exhibited by H. A. Keister, Bangor, Mich.

chicken is set before him. He begins carving and the smile on his face gradually dies away as he fails to make any headway. He wrestles with the chicken awhile, sharpens his knife and tackles it again, only to give up in disgust. "Thus the old hen has curtailed consumption." With a better quality of chicken meat consumption would be doubled.

A lesson in candling and grading the eggs is then run off the reel, showing the actual operation.

Some lessons in breeding and breeds are given. There is a procession of 200-egg hens, followed by a procession of 100 Barred Rock cockerels, lively vigorous fellows, all bred from 200-egg hens. Individual good and poor layers are shown, and individual male birds, scratching, crowing and flapping their wings on the screen.

The operation of trapnesting the fowls is clearly demonstrated with the Oregon Station trapnest. The fowls are seen jumping up to the nests, entering the door and closing it behind them. The attendant comes around, releases the hen, takes the egg and marks the egg record.

Finally a very attractive scene is shown, entitled "A College Threshing Scene." A hundred White Leghorn pullets are threshing a shock of wheat. This is a sort of self-feeding separator. The scene is exceedingly lively, and after the sheaves are torn to pieces the fowls are busy scratching in the straw, when suddenly and without apparent cause, they take to their wings and fly at the audience, and the picture machine says SHOO.

# Stoddard on That Remarkable Bulletin

A Detailed Review of Dr. Pearl's Recently Issued Bulletin of the Bulletin of the Maine Station  
By H. H. Stoddard, Riviera, Texas

IT IS PROPER on receiving a bulletin, to turn to the summary. Darwin set the good example of the summary, and scientific writers have been following it ever since. Often it is not necessary to read the body of a bulletin at all, because you need to know only what the author is trying to get at, the nature of the experiments by which he proposes to reach the truth, and, lastly, his conclusions. A thousand details in the body of the pamphlet the reader may skip if he is pressed for time, and I observe that the very class most likely to read a scientific treatise is a class that almost always is thus pressed.

The summary in the bulletin under discussion is, however, so misleading that if Dr. Pearl finds he is misunderstood he has only himself to blame. Ninety-nine out of a hundred readers naturally believe that his bulletin teaches that descent of high fecundity is only through the male line, and that the females cannot bestow it to their progeny of either sex. Yet really what it teaches is that the females have just as much power to impress fecundity on the race as the males have. See Bulletin of Maine Station, No. 205, pp 378-9, or quotations of same in this magazine for March, p. 487, col. 3.

What Dr. Pearl really teaches is that high fecundity is transmitted equally by both sexes, and by alternation, but in his summary (misleading because incomplete) he has laid a trap for his readers; for, although it tells what the daughters inherit, and from which parent, it is silent as to what the sons inherit and from whence. Such information must be picked out of the body of the treatise where it is like a needle in a haystack. If the doctor had studied hard to be obscure, he could not have better achieved his purpose. He winds up, page 391, with the observations:

"To the practical poultryman the data and conclusions of this paper would appear to have some significance. They make it possible to outline a scheme of breeding for increased egg production which shall be intelligently directed towards the attainment of that end. This, however, is not the place to discuss such a scheme. That will be undertaken later in another place."

Readers, however, need not wait for another bulletin. The proper "scheme of breeding" is apparent at a glance, supposing the Pearl doctrine of inheritance of fecundity through alternation by sex is true, as we shall see farther on.

As I have said, the bulletin's summary naturally leads its readers to infer that high fecundity is inheritable through males only. Here I will take the liberty of using Mr. Taft, a neighbor of mine, to enable me to illustrate.

When the president was making a campaign speech in New Haven, Conn., a civil appearing man begged to ask a question. "Certainly," the orator said. "If a man has a wife and four children, and not a cent, and has hunted a job in vain for three weeks, what is he to do?"

"The Lord only knows," said Mr. Taft, and went on with his speech. A poultry keeping neighbor "dropped in on me" who had been reading the bulletin under present consideration. He was a trifle excited and exclaimed that it taught that big laying does not descend through hens but only through roosters.

"Where did they get it?" I asked. "From other roosters," he replied. "And where did they get it?" "From others." "But where did it come from in the first place?" "The Lord knows," he said, "but anyhow cockerels inherit fecundity from their sires, according to Dr. Pearl."

My correspondence with others, in various parts, imbibed the same idea, and thought that the bulletin asserted that hens, though indispensable as egg producers and useful in a way, were of no account as transmitters of unusual laying powers. That males were the high priests to carry the ark of the covenant.

But my neighbor had not read with sufficient care. I asked him if he was sure regarding Pearl's position. "Oh, yes," he was, "and the doctor applied it to the production of butter and beef also, and lectured before a farmers' or cattlemen's meeting in Maine to the effect that breeders had been wrong hitherto in placing their selection on the

female side or on both sexes, but should select males alone as the basis of the quality desired, be it color, shape, size, butter fat or anything else."

Whatever may be true about Dr. Pearl's speech, and I believe my neighbor misunderstood it, in part at least, it is true that the Bulletin, although it gives on pages 378-9 (quoted in A. P. J. editorial, page 487, col. 3, March issue) what appears to be at first sight a complete Pearl formal doctrinal compendium, to-wit:

"High fecundity may be inherited by daughters from their sire independent of the dam.

"High fecundity is not inherited by daughters from their dam.

"A low degree of fecundity may be inherited by the daughter from either sire or dam or both," yet this summary omits stating whether or no cockerels inherit from the dam the factor of fecundity which it says they transmit to their daughters.

But we are not left entirely in the dark. My neighbor had not read, or he too hastily read, page 317 of bulletin, about an illustrious male Barred Plymouth Rock, No. 552, who had poor laying sisters but whose mother was a good layer, which even in winter gave sixty-one eggs. "From her he evidently got," says Dr. Pearl, "a factor of high fecundity which his sisters could not acquire in this way."

Therefore we are justified in adding to the bulletin, page 379 information from page 317, and by changing the form so as to be concise, we have:

High fecundity is inherited by daughters from their father and by sons from their mother; but is not inherited by daughters from their mother nor by sons from their father.

This shows that my neighbor was mistaken in construing the bulletin. It does not teach that high fecundity descends from grandfather to father and from father to son, but that it descends, by regular succession of generations through regular alternation of sexes, that is, from great-great-grandmother to great-grandfather, then to grandmother, thence to father, thence to daughter, thence to son, and so on.

Taking the above as a guide regarding the "Mode of Inheritance of Fecundity in Domestic Fowl," to quote the bulletin's title, the poultry breeder who is aiming to produce that which he long has sought and mourned because he found it not, namely, a 200-egg strain, may proceed confidently.

First, to get highly fecund males, beg, borrow, buy or steal a female eminent in fecundity. Mate her with any cock according to convenience, no matter whether his fecundity is high or low. From this mating you will raise roosters that will, when mated with whatever hens that are handy, no matter whether they are of high or low fecundity, produce daughters that will lay like sixty.

Mark the result. Of course you will, in succeeding generations, have no poor layers on your premises. You will have superior layers all your life, after the old stock is killed off, and will again need to beg, buy, borrow or steal nary an extra fecund female, from which to raise eminent males for breeding purposes, to get other eminent females, to yield other eminent males, to mate with eminent females, and thus and so on and on. If you don't go outside of your own ranch for breeders it will be impossible for you to procure anything other than good birds of either sex for breeding stock.

The path of the poultryman is to be henceforth greased with butter. What can be more simple than the plan above described? Yet the doctor sneers at the "childishly simple scheme" hitherto followed. See page 388 where he says:

"Selection to the breeder means really a system of breeding. Like produces like, and breed the best to get the best; these epitomize the selection doctrine of breeding. It is the simplest system conceivable. But its success as a system depends upon the existence of an equal simplicity of the phenomena of inheritance. If the mating of two animals somatically a little larger than the average always got offspring somatically a little larger than the average, breeding would certainly offer a royal road to riches, but if, as a matter of fact, as in the present case, a character is not inherited in accordance with this beautiful and childishly simple scheme, but instead is inherited in accordance with an absolutely different plan, which is of such a nature that the application of the simple selection system of breeding could not possibly have any direct effect, it would seem idle to

continue to insist that the prolonged application of that system is bound to result in improvement.

"It seems to me that it must be recognized frankly that whether or not continued selection of somatic variations can be expected to produce an effect on the race depends entirely on the mode of inheritance of the character selected. In other words, any systematic plan for the improvement of a race by breeding must be based and operated on a knowledge of the gametic condition and behavior of the character in which improvement is sought rather than the somatic. Continued mass selection of somatic variations as a system of breeding, in contrast to an intelligent plan based on a knowledge of the gametic basis of a character and how it is inherited seems to me to be very much in the same case

to the long inclement winters of a climate unnatural to descendants of *Gallus bankiva*, to the cumulative effects of artificial incubation continued through successive generations or possibly to inbreeding to some extent, or to less care given in the later generations. Any lack of equal conditions in the environment in different years, as the experiment progressed, would, of course, vitiate conclusions.

The fact is the bulletin is wrong. High fecundity and low, too, may descend from either sex to either sex or it may not descend at all directly from either to either. There will be sometimes great irregularity, and scattering every which way, and reversion to remote ancestral types, especially if there has been a cross of strains considerably diverse.

Selection for the purpose of breeding from the best to get the best even if it is "childishly simple," will continue to be the only way to fix characteristics, and among many misses there will be some hits. Breed "the best to the best" and though you may find that some of the progeny may not be as good as the average of their parents, yet some may be as good and some decidedly better. It was eminent layers arising from eminent layers that in the course of ages brought the six or eight eggs, twelve or sixteen if there were two broods per annum, of the jungle fowl to, say, fifty and upwards, under the mathematical law that the more eggs a domesticated bird lays the greater the chance that her eggs will be set. Also profuse laying implies profuse feeding and poultry keepers gave more food, and through a longer time of the year than their wild ancestors, and their still wilder predecessors with little farming or none had little to feed their fowls with.

In time the average of fifty eggs, or such a matter increased, as was inevitable under the mathematical law above stated, to seventy or eighty, and then in certain parts of the world where there were no long, cold seasons, the trait of non-sitting came to help. This trait, at first the result of

as a man who, finding himself to be imprisoned in a dungeon with a securely locked and very heavy and strong door with the key on the inside, proceeded to attempt to get out by beating and kicking against the door in blind fury, rather than take the trouble to find the location of the key and unlock the door. There is just a possibility that he could get out finally in a very few instances by the first method, but even in those cases he would be regarded by sensible men as rather a fool for his pains."

See how Dr. Pearl despises the old-fashioned practices. But now come to look at it, how different is the method I have described as the one a convert to Pearlism, or alternation, would have to follow from that which poultrymen have been accustomed to pursue? When they have trap-nested and used for breeding no hens but heavy layers they will soon have, according to Dr. Pearl, no cocks at all to use but those whose dams were heavy layers; and have they not been acting exactly like a Pearlite? They selected an eminent layer. Of course they had not dreamed that her excellence came from her father according to the Pearlmanian theory of alternation by sex, but that did not matter. Paired her with a cock whose constitution was just loaded with latent fecundity derived from his dam, the literally damed good quality being just what a Pearlite would approve. Now, if the "childishly simple scheme" or "breeding from the best to get the best," which "is the simplest system conceivable," was so totally and disgustingly fruitless in the past; will the identical practice result differently because masquerading under a new name?

Notwithstanding selection of the best to get the best has power to increase fecundity, that power may be offset by unfavorable conditions and may even be more than offset, so that in spite of the most rigid selection the stock may not only fail to improve or even hold its own, but may deteriorate. The oft quoted failure of the Maine Station to increase laying has been attributed by different writers

fecundity, later became its cause and effect both, and the one hundred mark was reached. The breeding "from the best to get the best" has brought certain strains of fowls from that point to the one hundred and thirty-five egg standard. If it is to reach the two hundred notch, it will be in the same way progress has been made through past ages. Natural laws have not been repealed and will not be.

Bulletin No. 205 of Maine Station contains a curious unreliable statement. On page 286, we read:

"The mere presence of an anatomically normal reproductive system, including a normal ovary with a full complement of ova, and a normal oviduct, is not enough to insure that a hen shall lay eggs, that is, exhibit actual as well as potential fecundity. While comparatively very rare, cases

do occur in which a bird possesses a perfect ovary and perfect oviduct and is in all other respects entirely normal and healthy, yet never lays even a single egg in her life time. Such cases as these prove (a), that what we may call the anatomical factor is not alone sufficient to insure that potential fecundity shall become actual, and (b) that the anatomical and physiological factors are distinct, in the sense that the normal existence of one in an individual does not necessarily imply the co-existence of the other in the same individual.

"A case of this kind is found in hen No. 8051 hatched March 29, 1909, and killed for autopsy record August 24, 1911. This bird had the secondary sexual characters of the female perfectly developed, and was entirely normal in other respects (body weight, 2366 grams). This bird never laid an egg during its life. The ovary was normal and was of about the size proper to a fully developed pullet just reaching the point of beginning to deposit yolk rapidly in certain oöcytes in preparation for laying. While counts were not

identical personality and character, at this very instant of time, in the exact spot of all others on this globe where you are now, and reading these very lines; while I should mayhap at the same instant be wondering whether in these sentences I made my meaning plain to you.

Fatality is omnipresent throughout the universe, no matter whether human life or bird life or anything else is considered. All things have to be as they are and all of us do as we have to. No drop of rain falls but the direction it takes is as strictly determined as that of the late stupendous flood, and the path of neither could have been followed if every previous drop of water on the globe had not moved just as it did at the time it did.

Please read the quotation again and notice the very broad and comprehensive terms laid down. "All other respects entirely normal and healthy." Every condition necessary to laying, both anatomical and physiological, is present; and yet a bird might never lay "even a single egg in her life time." The anatomical requisites are all there surely, for the hen has a "normal reproductive system including a normal ovary with a full complement of ova and a normal oviduct," and the physiological requisites are all present, yes, every one, or she could not be in all respects "entirely normal and healthy." Why! Under those conditions not even the influence of a male bird would be needed, and she could no more help laying than gunpowder could help burning if a live coal should be placed on it.

Now, if some Pearlite should say that on top of every other imaginable requisite a certain platonic "principle" or "essence" of fecundity, or reproduction, must appear as a "factor" at a certain age of a hen-pullet or she couldn't have the laying power, the reply would be darned transcendental nonsense. It would be like saying that the warmth and rains of spring, in conjunction with fertile soil, and perfect life and vigor of a tree could not make it leaf out unless an impalpable transcendental essence or principle of vivification or leafication were added.

The naive description Dr. Pearl gives, page 286, of "Hen No. 8051, killed for autopsy," is remarkable as proceeding from a professor of biology. "This bird had the secondary

made this ovary appeared to carry a normal number of oöcytes. In general it was anatomically normal, but physiologically in the state of development appropriate to a five or six months old pullet just about to lay. The same was true of the oviduct. In this case the physiological factor or factors necessary to the bringing about of ovulation were simply totally lacking, in an otherwise perfectly normal bird."

The above will not hold good at all. A hen possessing "a perfect ovary and perfect oviduct and which is in all other respects entirely normal and healthy" will lay, that is all there is about it. Of course, food, warmth, exercise, etc., are implied or the hen couldn't be "entirely normal and healthy."

Dr. Pearl, of course, means that the bird is in a suitable climate, has suitable food and drink and so on, otherwise the proposition would be sheer nonsense. He would not insult his readers by tying the bird down in a snowbank and starving her. She wouldn't remain entirely "healthy" very long. No, take the case just as he states it, and it would be as impossible for the hen not to lay as for water to keep from running down hill, or for thistle down to not be wafted in a gale.

Our author ignores the doctrine of fatality. There is an inevitability in every occurrence no matter what. Given a certain heredity and a certain environment, and certain results follow as surely as night follows day. If you and I were to be born again, of the same parentage, at the same age of the world as before, and subjected to exactly the same influences of bringing up, with the same neighbors, playmates and surroundings, in a word the same environment as before; you, my reader, would be, with your

A prize-winning Silver Campine. Owned by Manhattan Farms, Brighton, N. Y.

sexual characters of the female perfectly developed and was entirely normal in other respects (body weight 2366 grams). This bird never laid an egg in her life."

Just as if scalpel, microscope and human eye could reveal everything. Am reminded of a discussion between two persons, one being a Spiritualist who claimed that there were sometimes cases of suspended animation where the spirit left the body and went away off somewhere on a roving commission, and came back when it got ready, and reanimated the body of clay. The other person replied that

the physiological machinery of the seemingly dead subject was out of order, and, on some change taking place, consciousness reappeared. "Oh, no," said the other, "suspended animation sometimes occurs when the subject is perfectly healthy and all right in every respect."

"It is impossible to tell by any test that can be made," was the reply, "whether such a delicate and complicated machine as comprises human nerve and brain is exactly right or not. A small thing may stop a watch, a small obstacle in the brain may produce fatal apoplexy, and a very elusive thing may banish consciousness."

A very valuable addition to knowledge is given by this Bulletin in stating the results of a careful count of the oöcytes, or beginnings of possible eggs, visible in the ovaries of fifteen hens. These vary from 914 to 3605. Thus the old Geyelin yarn is officially discredited, and more thoroughly than ever before. The ghost is laid.

In Geyelin's book, the American edition of which was published in 1867, it was asserted that the minute ovules clustered in the ovary numbered 600 and "therefore a hen during the whole of her life, cannot possibly lay more than 600, which in a natural course are distributed over nine years in the following proportion:

First year after birth.....	15 to 20
Second year after birth.....	100 to 120
Third year after birth.....	120 to 135
Fourth year after birth.....	100 to 115
Fifth year after birth.....	60 to 80
Sixth year after birth.....	50 to 60
Seventh year after birth.....	35 to 40

## Report of National Egg-Laying Contest

Black Langshans Make Record for March—White Leghorns From England Still Lead for the Entire Time, With a Total of 890 Eggs

THE race is becoming much more interesting. The majority of the hens have settled down to business and nearly every pen is making a very creditable showing, some doing much better than others, of course. The total record for the month was 12,889 eggs, which runs the grand total for the four and a half months up to 34,525 eggs. No remarkably high records have been made thus far, but the general average is much better than last year. The English pen of S. C. White Leghorns is 129 eggs in advance of the next highest pen. From the results obtained thus far at this place and at Storrs, Conn., and from our own knowl-

edge of conditions, we believe the English breeders have been studying the question of breeding for egg production much more than have the breeders of this country. This is one of the objects of this contest. We hope to stimulate some such interest in this country. Notwithstanding the views of some of our leading authorities to the contrary, we believe if the fowls have been properly bred, if given reasonably good care and reasonably good feed, they will produce a greater number of eggs than another pen of fowls of the same variety which have been carelessly and promiscuously bred, even though this last mentioned pen may get as good or perhaps better feed than the first named pen. Our observations and investigations thus far bear out these facts.

One Buff Orpington pullet, No. 647, laid 29 eggs in 28 consecutive days this month, laying 2 eggs in one day. She then went broody for the second time this season. Broody hens now begin to trouble us. Six hens—one White Wyandotte, one Buff Plymouth Rock, one Black Langshan, two White Orpingtons, and one Buff Orpington—each laid 30 eggs in the 31 days. One hen, which made a high record last year, has only laid 2 eggs this year. Another high record hen is also making a good record the second year. A pen of Black Langshans, No. 57, from Missouri won the silver cup for the best record for March by laying 248 eggs in the 31 days. Three out of the 12 highest pen records for March were made by Black Langshans, 2 were White Wyandottes and 2 were Silver Wyandottes.

The twelve highest pen records for the first four and a half months of the contest are as follows, three pens out of the twelve highest having tied:

Eighth year after birth.....	15 to 20
Ninth year after birth.....	1 to 10

That preposterous rigmarole has been in the absurd poultry columns of agricultural papers showing how much their authority amounts to.

Reader, please notice the yield for the first year of "15 to 20," yet the poultry press has shown over and over again that in a majority of cases the hen-pullets beat the hens.

In April A. P. J. concerning Dr. Pearl's Bulletin it was pointed out that as a tendency towards unusual frequency of twins (in the human race and in all animals which produce normally but two at a birth) frequently descends from dam to daughters or granddaughters, and crops out for a number of generations making a "twin strain" irrespective of the sires which are from non-twin strains; it is therefore proved that, outside of bird species, unusual prolificness may descend on the mother's side to her daughter's in cases where it plainly does not exist at all on the father's side.

Now, it should be added that the tendency towards twins is decreased fifty per cent, we may reasonably suppose every time there is a union introducing blood with no such tendency, and accordingly the twin-bearing trait peters out in a few generations. But while it lasts, the following very significant fact is revealed. Not the daughters alone of a twin bearing human strain transmit the fecund trait to following generations, but the sons also inherit the same power of transmission to their progeny. Both sons and daughters may inherit fecundity from fathers, and both sons and daughters may inherit fecundity from mothers.

During the first 136 days of this year's contest, the leading pen has laid more eggs than the two leading pens of last year's contest laid in the first 151 days. The leading hen this year has laid 113 eggs in the first 136 days of the contest, and the leading hen last year laid 116 eggs in the first 151 days. The individuals and pens are each making better records this year than last. The 12 leading hens have made the following records for the first 136 days:

### The Feeding Test.

We are now beginning to hatch a few chicks from these pens to determine, if possible, if the different methods have any noticeable influence on the percentage of fertility of the eggs, the hatchability of the same, and on the livability of the chicks. We have male birds of the same age and breeding in all pens.

In the pen where the same kind of feed has been kept before the pen of five White Leghorns and five Buff Orpingtons, and are allowed to eat as much or as little of each kind of food as they desired, the results have been as follows:

They have laid more eggs than any other of the ten feeding test pens and have eaten the following:

77 pounds oats, principally rolled oats;  
66 pounds wheat;

### "LADY BEAUTIFUL."

Winner of first prize and shape special at Madison Square Garden, New York, 1912-13. Lady Beautiful, like all the great winners of the day, combines with her wonderful form and color a temperament only found in really great birds. She has the natural carriage along with her quality that adds to her attractiveness. Her barring is of the cleanest possible kind with strong contrast, there is no intermingling of the dark bars into the white, but they stand out strong, and seem to lay right over one another. "Lady Beautiful" is a prize, with the best of breeding back of her. Her line has been a prominent winner for years, and we look to her owner and breeder, Mr. C. N. Myers, Hanover, Pa., to produce and show more like her in the future. Mr. Myers makes a specialty of the female line. H. P. Schwab.

60 pounds corn, principally cracked corn;  
36 pounds millet;  
24 pounds sunflower seed;  
18 pounds kaffir corn;  
12 pounds cane seed;  
10 pounds oyster shell;  
189 pounds water;  
130 pounds buttermilk.

They are allowed to help themselves to either and drink a little more water than buttermilk.

They have eaten but little of anything else than the feeds mentioned above and but very little ground feed of any kind. They have eaten twice as much cracked corn as whole corn. The hens in this pen do not seem to be any fatter than the hens in the other pens. They are in just good laying condition thus far.

### Pen No. 64—The Canadian Method of Feeding Laying Hens.

This is one of the most simple methods of feeding hens. Thus far is this proven to be one of the most satisfactory and the hens are making a good egg record.

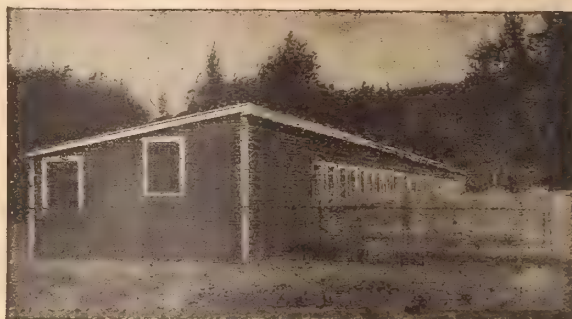

In winter months the grain mixture is composed of two-thirds corn and one-third wheat, thrown into the straw litter. In summer one-third corn and two-thirds wheat; in the spring and fall months equal parts corn and wheat. We feed about a pint to ten hens in the morning and perhaps a little more at night. Rolled oats are fed from a hopper. The hens are also supplied with grit, shell, charcoal, and some wholesome green food. They are given nothing to drink except buttermilk. In our opinion, this is a very well balanced ration for any farmer to use. It is about as simple as you can make it and still get the best results.

### Care of Growing Stock.

Do not fall into the all too common habit of thinking that after a chick is past the first three weeks, it will raise itself. If a chick is to develop into a healthy, vigorous cockerel, or a strong, active pullet that will shell out the eggs next winter, it must have the best of feed and care throughout the entire growing period.

**DO NOT OVERCROWD.** Many of the ills and much of the mortality among growing chicks is due to overcrowding. The brooder or coop should furnish ample room for the little fellows to stretch themselves out at night without coming in contact with each other. Plenty of fresh air should be admitted at all times in such a way that there will be no draughts, causing the chicks to huddle together.

**FIGHT LICE AND MITES.** Like the poor, these little pests are always with us, and a continual warfare must be waged to keep them from exacting a heavy toll of dead,

Breeding pens on the Idlewood Poultry Farm, Swanville, Pa.

dwarfed and stunted chicks. Watch for head lice. Greasing lightly the heads of all chicks over two weeks old with a mixture of kerosene and lard, equal parts, will serve either as a preventative or cure. Also grease lightly under the wings. Be careful not to use too much grease and oil. Application should be repeated in about two weeks if chicks are badly infested. For mites, paint or spray brooding quarters with a mixture of eight parts kerosene to one part crude carbolic acid. This will also serve as a good disinfectant.

**PROVIDE PURE WATER.** The importance of an abundance of fresh, cool, pure water cannot be overestimated. Filthy drinking water is one of the most common causes of disease, and lack of water a too common cause of unsatisfactory growth. All drinking vessels should be scalded at least once a week. In cool, damp weather sufficient permanganate of potassium to give the water a deep reddish tinge will assist in preventing cold and bowel trouble.

**GOOD FOOD PROPERLY FED.** Good feed and plenty of it, easily accessible at all times, is one of the most important "secrets" of successfully producing the best birds, either for market, laying, or exhibition and breeding purposes. After chicks are six weeks old, if they are on free range, they should have free access to a hopper containing equal parts by weight of cracked corn and cracked wheat. If they are confined to runs in which there is no green feed they should be given daily lettuce, sprouted oats or lawn clippings. The grain mixture above mentioned should be sifted and fed in a deep litter of cut clover or alfalfa, or chaff from a barn mow, or finely cut straw, so as to induce plenty of exercise. Plenty of clean, sharp grit should be provided, and a hopper containing the following mixture kept before them at all times. The proportions given are by measure:

8 parts bran;  
4 parts corn meal;  
4 parts shorts or middlings;  
2 parts fine meat scraps;  
1 part fine charcoal.

# Ten Years Trap Nesting W. Wyandottes

Increased Egg Production Influenced by Plenty of Food in Variety and Removal of Eggs From Nest Soon as Laid.

By Helen T. Woods

THE CLAIM TO A 200-egg strain of poultry has been put forth by poultrymen from time to time for a number of years, the inference being given that once you have a flock of 200 egg hens, with the right care in breeding and feeding, you may have them always, if you so desire. It might appear reasonable to believe that by breeding from 200-egg hens mated to cockerels from 200-egg hens that a 200-egg strain may in process of time be evolved. The question which naturally arises, What is lost and what is to be gained in such a process, is worthy of consideration.

Any good, live, well-bred utility strain of poultry today will range from 120 to near the 200-egg mark per year if they are given an opportunity to do so; that is, they must be well fed, meaning good food in variety and plenty of it, kept in open-air quarters, and water supplied them at all times. Under such conditions they could not be kept from laying. Now, in order to increase the annual yield of eggs, birds may be fed a little more heavily and must have the brooding habit checked whenever it makes itself known. The 200-egg hen has little time to devote to hatching and rearing chickens. She produces the eggs and her owner may work weary nights and days over hatching them by artificial means, or under other hens (these will, of course, be less than 200-egg hens, since a 200-egg hen has not much surplus time), and the result is seldom what he would expect from the offspring of such a phenomenal mother.

A little more than ten years ago, Louis H. Lemke, Bryantville, Mass., then living in a western state, began trap-nesting his flock of White Wyandottes with the idea of increasing the egg yield by the yearly selection of the best layers. His birds were of the best utility stock obtainable and he believed that in order to get eggs the birds must be well fed throughout the year. This meant that a supply of green food of some nature must be given in winter as well as summer, and he believed that too much broodiness must not be tolerated. Trap nests of two patented kinds were installed, as well as several others of his own design, and complete and exact records kept of the eggs laid by each bird in his yards. Occasionally one of the birds with either a light tread or a dainty way of getting into the nest would fail to trap herself as she entered or made her escape, and on one or two occasions a nest was found closed with an egg deposited therein, while the hen who had thus shown her cunning had escaped, but on the whole the records kept may be said to be exceptionally accurate.

Mr. Lemke is a man who has kept egg records of his birds not for the opportunity that it offered to advertise their laying ability, but because he earnestly desired to have in his yards the best layers possible. During all the time he has kept records of them, he has adhered to his rule of marketing any bird which remained in the "non-producing class" for more than six weeks at a time. We may be reasonably sure that, in studying these records, they are at least not doctored documents, since there has been no incentive whatever to add to the actual egg yields.

In the beginning, Mr. Lemke was surprised to find that some of his birds were laying between 150 and 180 eggs per year. There were, however, others that did not go much above 100, though having the same food and care. The poor layers were culled out as soon as discovered and eggs from best layers used for hatching. And here disappointment awaited Mr. Lemke, for from one of the best layers he had ever had in his yards, No. 7, who in her pullet year laid 228 eggs, and 183 eggs as a yearling, with a record of 128 eggs as a two-year-old hen, her most prolific offspring, No. 68, laid but 168 eggs as a pullet, and was not kept over for another year. No. 7 was a well-developed specimen and one which, during her three years of service, showed little inclination to become broody. At such times she was easily dissuaded, showing that her idea of usefulness was more the production of eggs than that of perpetuating her race. This was true in more ways than one, since her eggs were not as fertile as were those from birds laying fewer eggs.

The question naturally arises, What is lost by an exces-

sively high egg yield? Providing an abundance of food in variety will increase yield of eggs, and the quality of the egg as food will not be impaired; in the matter of the production of healthy offspring, there is room for serious consideration. Is the game worth the candle if from the eggs of heavy layers we get a low fertility, or weaklings in the offspring? It would seem to depend largely to what extent the matter was carried. In the matter of forcing, in whatever direction it is undertaken, the secret of success lies in knowing the mean between extremes. While it is principally eggs that Mr. Lemke is after, he has trap-nested enough birds to believe that it is not necessarily the best layer in a flock that is the greatest profit-winner. His efforts are to establish a mean between extremes whereby he can get the greatest number of eggs per bird consistent with good breeding.

Last season, for instance, he kept the following birds in one yard; the individual egg record of each bird is given, four of which are above the 200-mark, and the best fertility was shown by the eggs from birds that were not the heaviest layers.

Bird—	Eggs Laid.	Began Laying in—	Hatched.
No. 50.....	235	October	April 11
No. 51.....	226	October	April 11
No. 53.....	197	October	April 11
No. 57.....	208	October	April 11
No. 59.....	191	November	April 11
No. 60.....	193	November	April 11
No. 61.....	179	November	April 11
No. 63.....	194	November	April 11
No. 64.....	181	November	April 11
No. 71.....	194	October	April 11
No. 49.....	227	September	April 11

Mr. Lemke gives credit for the increased egg production in his flock to the abundance and variety of food given them, and to the removal of eggs from the nests as soon as laid. That the hens invariably find empty nests, that is, nests without eggs in them, goes a long way toward inducing a hen to continue laying. No one with any experience with poultry can doubt the effect on laying by constantly removing the eggs from the nests as soon as laid. The hen who steals her nest and lays more than fifteen eggs therein before she is overtaken by the broody fever is most unusual. As soon as any self-respecting hen finds her nest full, in other words, that she has laid all the eggs she can well cover, and the nest is left unmolested for a night or two, she proceeds to cover them and begins the arduous task of rearing a family. Whereas, if the eggs have been steadily and promptly removed, as in the case of the trap-nested bird, she either can't "keep count" or she is so busy producing eggs to make glad the heart of her keeper that she can't spare the time for motherhood. In the case of actually seeing the eggs in a cosy, secluded nest, the mother instinct is too strong to resist.

It naturally follows that a well-fed bird, if not allowed to sit when she becomes broody, will very soon begin laying again, and she can be "broken up" again and again with but very little loss of time from laying.

During the time that the records here given were kept, these birds were shipped by express a distance of about five hundred miles with no let-up in the laying. The birds were cooped and shipped in the evening, and upon reaching their destination the next morning were immediately placed in comfortable quarters. Being trap-nested birds, they show no alarm at being handled at home, and a one-night railroad journey did not affect their laying.

More carefully kept egg records, as carefully kept as those of Mr. Lemke and covering a period of years, would prove of great value in determining the rate of laying most desirable for domestic poultry. An average yearly egg yield from the different varieties of poultry, together with the comparative fertility of heavy yielding flocks and medium heavy yielding flocks, would prove of great value to the average poultry keeper. Such average egg yields for the different varieties would, of course, vary considerably under different methods and conditions of poultry keeping, but what any breed might do in the egg-producing line should be well-known, and published for the benefit of all poultrymen.

Notary Public.

### OUR GUARANTEE.

We guarantee our subscribers against loss due to fraudulent misrepresentation in any display advertisement appearing in the American Poultry Journal, providing the subscriber when ordering the fowls or merchandise states that the advertisement was seen in the American Poultry Journal, and places the order during the month or months in which the ad is inserted in our columns and notifies us of the fraudulent misrepresentation of the advertiser, giving full particulars, as soon as it occurs.

### Hats Off to Professor James Dryden.

Poultrymen should take off their hats to Professor Dryden, of the Oregon Agricultural College, Corvallis, Ore., as one of the most enterprising and down-to-date instructors in poultry husbandry. He has very successfully demonstrated the great value of the moving picture film in teaching poultry keeping and has set a pace that others, including the American Poultry Association, should be prompt to follow.

Several times we have mentioned Oregon's "movies" and for some time have been endeavoring to get Professor Dryden to tell our readers about them. Now we have his story in this issue and it is a most interesting one. Professor Dryden has proved by actual practical test that moving pictures teach poultry husbandry far better than ordinary lectures or any other method of teaching. The illustrations used with his article, "Moving Pictures Teach Poultry Husbandry," are from photos enlarged direct from the film. Fifteen hundred feet of picture film are used in these "movies." Here are extracts from Professor Dryden's letter to us, which accompanied his manuscript:

"Dear Dr. Woods: You and Mr. Stoddard were, I believe, the first to make mention of my moving picture poultry film. It has been quite a success. It has been in use most all winter. I have just finished a four weeks' lecture trip over the whole state, in which I used the film for half an hour, then lectured with slides for an hour more, sometimes two hours when the crowd seemed very patient. Had a talk every day, sometimes twice a day. The moving pictures, of course, were a bigger attraction than my talks. I used the moving picture theaters and there were big crowds. In January the film was shown in the city auditorium during the Colorado poultry show for a week, running it twice a day. I have a letter from them saying it was the

Look at the address on your wrapper. See that it is absolutely correct and notify us of any mistake, no matter how slight. Note the expiration date which appears thereon, as American Poultry Journal stops with the issue marked on your wrapper.

If you change your address give both your old and new address as well as your subscription number when notifying us of the change.

AMERICAN POULTRY JOURNAL is the oldest poultry paper in America. It has a national and world-wide reputation. The best writers on poultry matters contribute to its columns. It receives the patronage and endorsement of the foremost representative breeders of standard poultry and manufacturers of poultry appliances in the country.

hit of the show. Several other states and colleges have requested the film, among them your New England state of New Hampshire, for a grange organization. I have written a description of the film in response to your request for an article. The pictures were enlarged direct from the film. Sincerely yours,  
James Dryden."

We are glad to be able to present to our readers this interesting story of the most progressive movement yet made in teaching poultry husbandry. The story of this poultry film is a delightful one, full of human interest and with a lesson in every picture and lessons that cannot fail to prove a lasting benefit. The audience visits "Farmer John" and his wife and with them get the actual experience. Then they see the chickens hatch, see the flock of husky, busy chicks just out and they take these pictures home with them in their memories to see them again over and over. The poultry "movies" are a big thing. Professor Dryden has done untiring pioneer work in this field that is invaluable and we hope to hear of many other instructors who are following his lead.

### If the Coat Fits, Put It On.

When we see some of the fowls that are sold for breeding stock and some of the eggs that are sold for hatching, we cannot help wondering how some breeders manage to stay in the business. Of course a good many customers will complain anyway, a good many complaints are absolutely unreasonable and a good many customers are not sufficiently well posted to know what they should expect for a certain price. Nevertheless, there does not seem to be any reasonable excuse for the indifference and carelessness on the part of some breeders when filling orders.

We believe that a good many ship-

ments of poor stock and poor eggs are due to ignorance and inexperience on the part of the shipper, and, in some cases of experienced men, to an exaggerated idea of the value of certain stock and eggs.

If a man does not know healthy fowl, he ought to get busy and learn to know sound healthy specimens before he attempts to sell birds for breeding stock. It is bad business to let poor birds go off your place to be used as breeders. It is bound to advertise you as a producer of undesirable specimens and a man to steer clear of in the future.

We recall a certain breeder, a conscientious man of good standing, whose exaggerated ideas of the value of birds from his yards caused him the loss of considerable business. In common with a good many other fanciers he considered any old culls from his flocks plenty good enough, and almost too good, to sell as "utility stock" at low prices. He was in the habit of charging long prices for breeding and exhibition specimens and naturally enough convinced himself that any bird from his matings should be worth a good price. Result was that most of his culls went for "utility" purposes, when many of them should have gone straight to the pot through the market man. We saw a flock from his yards bought at \$3 each for females and \$10 for the male, that did not in our opinion have one \$3 bird in the lot. In that flock were several crooked breasted birds, two with wry tails, one with a "roach back" and there was little evidence of type or shape or size in the lot. With the exception of two or three birds the whole lot should have gone to market and would have brought about 75 cents to 85 cents each. It is all nonsense to pretend that because of the breeding back of these birds they were worth more money and would be likely to throw good chicks. As breed-

ers we wouldn't use them for a gift and there were few of them that we would care much for as table poultry. We put this case up to the breeder and he exchanged the birds for others more satisfactory, but he could not see wherein he had done wrong. He considered two of the deformed pullets very excellent specimens.

Another point where a good many fall down in "delivering the goods" is in the sale of eggs for hatching. Here again the exaggeration of value (because "anything produced by my pens" must be just about right) comes to sow the seed of dissatisfaction among the customers. Because of a big demand for eggs and because of high prices obtained for eggs, any old egg

insure safe delivery under ordinary handling. There are plenty of good shipping packages and they cost very little more than poor ones.

Give the customers a square deal and they will help build up your business. There is no better advertising asset than a satisfied customer. It pays to try to satisfy even the unreasonable ones. One "knocker" who is sure he has been "badly stung" can do a mighty big lot of damage to your business and to the business of others as well.

We know some big breeders who make it a point to try to satisfy every customer, no matter whether his demand is unreasonable or reasonable. They tell us that it pays and we be-

be as lenient as possible under the circumstances, and give these breeders an opportunity to fill their orders later on, and be patient about the matter even though there is some delay. Remember, these breeders who were thus affected have lost much more than you have, and because of this loss certainly are in need of your patronage. Therefore we suggest you be as patient as possible, and if not having already placed an order, you contemplate doing so, that you patronize these breeders whenever possible.

The American Poultry Journal extends its sympathy to the poultrymen affected by the flood.

—o—

### First Year Success Sometimes a Handicap.

From considerable experience and observation we have been convinced that success the first year in the business too often proves a considerable handicap to beginners with poultry.

The beginner, starting with everything new and on new ground, wins success too easily the first year and convinces himself that poultry keeping and chick rearing is "easy." If he happens to be a young man in the twenties, even moderate success the first year serves to convince him that he knows all there is to know about the business. The bug of conceit bites him so hard that he is certain he can show the old-timers a thing or two about poultry and make their more conservative methods look like a relic of the dead past.

The optimistic view of things, and the exaggerated ego that goes with it at that age, is a very natural phenomenon and not at all unpleasant to look upon, that is unless you happen to be directly and financially interested. Often a good many things can be learned from beginners, if you go about it in the right way. Besides, the "know it all" stage is not confined to any age or walk in life and it is a good deal like the measles. One is pretty certain to "catch it" some time and the later in life it comes the more serious the results may be. Usually a good recovery from the attack insures immunity in the future.

First year success leaves the beginner up in the air. He takes all the credit to himself and does not make due allowance for the work that new stock, new land and new equipment has done for him. Confident that the work is easily learned and that he now knows all that is necessary, he often rides to a hard fall. Sooner or later he has to find out by bitter experience that things are not as easy as they seem to be and that there are many little details that have to be attended to in order to have the work go smoothly and that one has to learn to be a keen and quick observer and pay close attention to his work in order to win continued success. Like any other legitimate business you can only gain what you earn in poultry keeping. There is no quick road to easy money that is safe to ride on.

Experience and skill are what counts most. The experience of others helps some, but mighty few people profit by the experiences of others. Advice can be had too cheap to have it do any good. Real experience is often dearly bought. It is only human nature to disregard the warnings of others and try it for oneself. Tell a child that a

from a certain mating becomes wonderfully increased in value—in the breeder's mind. As a matter of fact some of the eggs that are sent out to customers in \$5 and \$10 sittings are a disgrace to the breeder. All sorts of misshapen eggs and thin shelled eggs get included in the shipment, when they should go to market only.

Eggs with wrinkled shells even when badly misshapen will often hatch good chicks, but in a single sitting egg box they are a bad advertisement for the breeder. Eggs with thin shells, rough shells, or badly "water-marked" seldom hatch and often fail to arrive at destination unbroken. Eggs for single sittings ought to be carefully selected and should not include misshapen eggs. In incubator orders it is difficult to avoid including some slightly misshapen eggs and, as such eggs are sold at lower prices, no reasonable person will object to them if the fertility and hatchability is good. Badly misshapen eggs, thin shelled eggs, very big eggs, or very small eggs, or very rough shelled eggs should never be included in shipments of hatching eggs.

Another point that is not given sufficient attention is the sort of carrier used for shipping hatching eggs. The breeder cannot afford to use a poor shipping package. It is up to him to deliver the eggs to the express company, or parcel post, securely packed in a down-to-date container that will

lieve them, for we, in our long experience with poultry correspondence, have yet to receive our first complaint concerning them.

Put on your "thinking cap" for a while.

—o—

### The Recent Flood.

The flood which recently devastated large portions of the states of Ohio and Indiana, two of our most prominent poultry states, caused great loss to a large number of advertisers in American Poultry Journal.

While the loss was very great indeed, in many cases it has been exaggerated, and while many of our advertisers lost heavily, most of them report that they were able to save a large portion of their stock, and that they are still doing business. Many of them of course were unable to fill orders during the past month, but now report that they are in shape to take care of orders promptly. Some of the farmers who had eggs in mammoth incubators had serious loss and were unable to fill their orders for chicks promptly. Even in some cases, where they were not directly affected by the flood, we learn that gas mains were broken, on which they depend for heat; the eggs became chilled and the hatch lost.

We would suggest to those having placed orders with poultrymen who were affected by the flood, that they

hot stove will burn him and immediately he has to test it with his finger to see if it really will burn him. The better the brain equipment of the youngster the fewer times he will be burned before he learns to let hot stoves alone.

Don't burn your fingers more than once on first year success. It takes time to learn any business and the poultry business is no exception to the rule.

### Poultry Farms on the Market.

The managing editor of A. P. J. has information concerning two desirable farms suitable for poultry raising in eastern Massachusetts. As our readers have frequently written us for information concerning farms that are for sale we make this announcement and will be glad to furnish further details to anyone who intends to purchase and means business.

One farm is ideally located on a southerly slope, good buildings and abundant water supply. It contains about 30 acres divided about equally in woodland and good cleared land available for grass and tillage. There are down-to-date colony houses for the accommodation of fully 1,200 head of breeders and layers. This farm can be bought for \$7,000.00 cash including some equipment. Another smaller farm of about 19 acres with fairly good

buildings and excellent location and with a poultry house for 100 fowl can be had for \$3,000.00 cash. A desirable piece of woodland, unimproved, well located and adapted for poultry keeping, mostly southerly slope and containing a little less than 40 acres (no buildings), can be bought for \$1,500.00 cash.

### William Barry Owen Retires.

That Mr. William Barry Owen is retiring from the poultry business does not come as a surprise to those who know Mr. Owen personally, and the great amount of work he was doing in connection with the immense business which he has built up for Owen Farms.

In retiring from the poultry business Mr. Owen does so with all honor due him. He has done a great work in the advancement of the fancy poultry industry, the force of which has been felt in every civilized country, and anyone connected in any way with the poultry business is indebted to him.

The reputation of Owen Farms is world wide, as their shipments of poultry have been sent to every country where poultry is bred, and Owen Farms certainly enjoy an enviable reputation for honesty and fair dealing, as well as for producing and furnishing winning specimens in all of their several varieties. Mr. Owen has labored unceasingly and established this reputation,

and the very energy put into the business has caused it to grow so large as to become a burden, in fact the burden which now forces Mr. Owen to retire. This he can do knowing that he has succeeded in his desire to produce the best specimens the country has ever known, in each of the varieties bred by him, and knowing that his victory is complete.

All honor is due Mr. Owen for the good work done by him, and now that he desires to lay down the burden of responsibility entailed in the immense business he has established is certainly entitled to do so. In retiring from business it must be a great pleasure and satisfaction to Mr. Owen to know that the business he has taken so much pains to build up is being left in the hands of such a capable and competent man as Maurice F. Delano. Never were two men more closely associated or more completely agreed in their business policy than Mr. Delano and Mr. Owen, and the public can rest assured that Mr. Delano's conduct of the business in the future will be along the same generous business policy on which Owen Farms has been conducted in the past.

It is not necessary to introduce Mr. Delano to our readers, for he is one of the truly great men in the poultry business today; his enviable reputation for honesty and fair dealing is world wide. He has been and is doing much good in the upbuilding of the poultry industry, and in securing the full ownership of Owen Farms Mr. Delano has only opened up still greater possibilities for himself and the good of the industry.

To Mr. Delano is due a large measure of the success of Owen Farms. He has been the general manager under Mr. Owen ever since its inception, always advising and consulting with Mr. Owen in the conduct of the business. He has worked early and late, always having the farm's best interest at heart, always striving to please every customer. That honesty and fair dealing will succeed is proven by the large annual increase in Owen Farms' business. No advertising is quite so good as that of a satisfied customer, and Owen Farms has hosts of them in every state in the Union and large numbers in foreign countries.

Mr. Delano is also one of our most prominent poultry judges, and has done good work in a number of specialty clubs and in the American Poultry Association.

He is always a pleasant person to

## WHITE ORPINGTONS

### An Established Strain with an Established Record

Write for catalogue giving list of winnings at Madison Square Garden, Chicago, Buffalo International, Cleveland, Allentown, Hagerstown and Pittsburgh. We have supplied hundreds of guaranteed winners and have started thousands of people in the chicken business with breeding stock at moderate prices, quality considered. We are now booking orders for winners for the fall and winter shows, in Single Comb as well as the new Rose Comb White Orpingtons, on payment of a small deposit.

**We have improved the White Orpingtons  
and we can improve your flock**

A few bargains left in yearling breeders. "Poultry for Profit" gives the essentials of the poultry business. Price 25 cents. It contains no advertising. Our advertising is free for the asking.

**LAWRENCE JACKSON FARM**  
BOX A, HAYSVILLE, ALLEGHENY CO., PENNA.

FIRST PRIZE WHITE ORPINGTON COCK BUFFALO SHOW 1911.  
BRED AND OWNED BY

meet and has a smile that won't come off. He is a prominent figure in all of our most prominent poultry shows, and is personally known by poultrymen throughout the country. The poultry world needs more men like Mr. Delano and the American Poultry Journal extends its congratulations and best wishes for his success.

While we deeply regret that it is necessary for Mr. Owen to retire from active work among us, yet we know his heart is still with us, for once a poultry fancier always a poultry fancier. The work he has done and the name he has made for Owen Farms and the name of William Barry Owen will live forever. The American Poultry Journal extends to Mr. Owen its very best wishes for his future health and prosperity.

### Raising Baby Chicks.

Do you realize that on the successful raising of your baby chicks depends your whole future success in the poultry business? We often hear the remark made by a poultryman when a baby chick is found dead, "Oh, well, it is just one chick." Do you ever stop to consider just how important the life of just that one chick may be to you? Do you realize that in that very chick may have been combined the results of all of your years of labor, hopes and desires, that would, had it grown to maturity, produced the one top notch bird that you have lived in hopes of being able to produce; the one bird that could have won the blue for you at a show like Madison Square Garden, and placed your name in the front ranks as the best breeder of your chosen variety. We wish to repeat that in just that one chick may have been the very thing you have been striving for, and may mean the difference between failure and success to you. Therefore it is very important that you look after the life of each and every chick hatched.

In the past it has required a great deal of time to properly feed baby chicks, especially those hatched in incubators and raised in brooders, for the reason that with no mother hen around to call the babies, and to pick up feed and bugs for them, and keep them exercising so that their food is properly digested. Their crops are very small indeed and hold but very little food at a time, which is soon digested and more has to be furnished them. If any great quantity of feed is thrown at a time, more than they can eat up readily, this feed is trampled over by them and becomes filthy, absorbing the foul gases which makes it unfit for food. If in their hunger they are forced to eat it, these gases irritate the digestive organs of the chick, causing inflammation. The chick then drinks large quantities of water to allay the fever; this results in bowel trouble and the chick, having but little vitality to draw on, soon lays down and dies. Therefore, you can readily see how important it is that little chicks should be fed clean, sweet grain and because of their crops being so small they require but little food at a time, but require it often. To properly feed little chicks by hand requires much more time than most poultrymen are able to give them. However, there has recently been invented an automatic baby chick grain feeder which will do just this work. This is a wonderful labor saving device and will be greatly appreciated by the poul-

tryman who raises his chicks with incubators and brooders. A day old chick will successfully operate this feeder, getting its feed at any time that it is hungry. Chicks fed with one of these feeders develop the very fastest which is possible for them to do, because they are not stunted for want of food. By using these feeders they are always fed clean, sweet grain, just when they want to eat it. Hence it prevents a large amount of loss, sickness and disease. Further than that the weak chicks have a chance to get fed after the strongest ones have satisfied their appetites. Many poultrymen have successfully tried out this feeder and are loud in their praise of results obtained from it.

### DR. WOODS' NOTES AND COMMENT.

The American Poultry Association election became a bit strenuous in the contest for the presidency during the past month. The ballot has yet to be counted on May 5 and not until then shall we know positively the choice of the voting members. Meanwhile it is significant that the American Poultry World in its April issue published an editorial headed "The Election of E. E. Richards as President of the American Poultry Association," in which his election appears to be a foregone conclusion and the association receives Mr. Curtis' congratulations. Also the R. P. J. for the same month publishes an editorial of like tenor and Mr. Richards' campaign literature was practically all Curtis endorsement and that of Mr. Curtis' employees. One is at liberty to wonder just how far Mr. Richards, if elected, will be called upon to pay his obligations to Mr. Curtis.

E. B. Thompson, over thirty years a breeder of poultry and for twenty-two years a member of the American Poultry Association, when the returns are in may prove the winner in the presidential contest. He became a candidate for president of the A. P. A. at the earnest solicitation of friends and breeders from every section of the country. Mr. Thompson is one of our leading representative breeders. Mr. Richards is editor and publisher of the Western Poultry Journal. It is noteworthy that Mr. Curtis' activity on

behalf of Mr. Richards and against Mr. Thompson did not develop its full head until after E. B. Thompson had made the following pledge to the members of the A. P. A.:

"If elected I will take office FREE FROM ANY PLEDGE OR PROMISE to any man or men, except the pledge I now make to you—viz.—to bring to the high and important office of president all the ability I have and to use it for the benefit and best interests of every member and breeder in this great industry of the United States and Canada. My rulings and every official act on all questions coming before me will be fair and just to all, according to my best judgment.

(Signed) E. B. Thompson."

Extended comment on above paragraphs is not necessary. It has been clearly put up to every member of the American Poultry Association to make his decision and to cast his ballot. By the time this magazine is in the mails most of the ballots will have been cast. It remains for the final count to show the will of the majority of A. P. A. members. If Mr. Thompson wins it will be clear that members want a breeder for president and a man who will be president in both name and action and who will take the office with no pledge or promise except to fulfill his duties to the best of his ability and to be fair and just to all. Should Mr. Richards be elected we may learn why he re-entered the presidential contest after saying he was not a candidate and why G. M. Curtis dropped Mr. Thompson to become such an ardent and aggressive supporter of Mr. Richards. Time will tell.

We are in receipt of attractive catalogues from the following breeders: A. C. Hawkins, Plymouth Rocks, Lancaster, Mass.; E. B. Thompson, Ringlet Barred Rocks, Amenia, N. Y.; John S. Martin, Regal White Wyandottes, Port Dover, Canada; U. R. Fishel, White Rocks, Hope, Ind.; DeGraff Poultry Farm, R. I. Reds, Amsterdam, N. Y., and Dr. J. H. Prudhomme, Silver Campines, Thurmont, Md.

The second annual year book of the Rhode Island White Club of America has just been received from Mrs. C. M. Vertrees, secretary, Cecilia, Ky. The

## May Chicks Are Best

The month that the flowers come into bloom seems to be the best month to hatch exhibition chicks for the winter shows. My five winning cockerels in the open and pen classes at the last Boston Show were all hatched during the last week of May and the beginning of June. The weather is warm, vegetation springing up, and fertility runs high and the chicks are strong and vigorous. Why not choose this month to become acquainted with Regal White Wyandottes? I guarantee a good hatch. Mr. R. K. Baker, Waseca, Sask., writes me as follows:

"We got fourteen nice chicks from the fifteen eggs you sent us. We consider this hard to beat, as the eggs had been shipped almost 2,000 miles by rail and were six or seven days on the road, being changed from one road to another several times. They were certainly well fertilized and well packed."

Such a hatch would not be possible with any other than the Regal Strain.

Eggs for hatching from 20 beautiful exhibition matings, per 15..... \$ 5.00  
Per 30..... \$9.00 Per 45..... 12.00  
Per 100..... 24.00  
Dorcas settings at same price during May  
Utility eggs, per 100..... \$9.00

Crusader III, a Boston Winner

club has more than doubled in membership since its organization, at which time it had 76 charter members. Increasing interest and rapid gain in popularity for Rhode Island Whites is reported by the secretary. The club now has members in thirty-five states and in Canada. The year book contains the standard for the variety and is sold at ten cents a copy.

\* \* \*

The Wozelma Farms Producing Company, formerly of Silver Lake (Kings-ton), Mass., has moved its poultry plant and business from Massachusetts to New Jersey and is to establish itself on a small farm in West Orange near Verona. At the annual meeting of this corporation the following officers were elected: President, Hubert V. W. Card; treasurer, John E. Zeller; clerk, H. LeB. Sampson; directors: the president, treasurer and Ralph L. Mason. We understand that the plant is to be devoted to the production of high class market poultry and eggs exclusively.

\* \* \*

It doesn't do any good to kick about the weather—simply smile and make the best of it. It has been a hard season for early chicks thus far. Rain and exceedingly high winds for most of March and long drawn out drenching downpours for the greater part of April up to time of going to press. The Anchorage Farm is wetter than it has ever been since we located on it, but luckily the soil drains quickly and a few days of sunshine will improve things wonderfully.

\* \* \*

John H. Robinson fears that we are concerned about our status in Massachusetts Branch of A. P. A. Not very much concerned, John, merely interested in how others stand. By the way, you have the dates mixed. The writer joined in 1907, not in 1909.

\* \* \*

In writing us concerning our editorial mention of the Lecture Bureau's (A. P. A.) appeal, Chairman Whittman says: "I wish to thank you for your editorial mention of my A. P. A. Bulletin report. Every member of the Lecture Bureau wrote me highly approving of same. I have had other kindly words of approbation from other sources BUT NEVER A SINGLE

LINE OR PHOTO FROM A SINGLE BREEDER. I knew there was little interest in educational work among the poultry fanciers, but was not prepared for such monumental indifference. I hope your editorial will help bring about a change of attitude."

It certainly would appear to be time to wake up and shake off the Rip Van-Winkle sleep that seems to affect some of our breeders. Progress in poultry educational work ought to make better business for the fanciers. Why not put your shoulder to the wheel and help boost?

Editor American Poultry Journal.

Dear Sir: Have just been reading H. H. Stoddard's article in the April

Champion Buff Orpington Cockerel; also winner of silver cups and other special prizes. His dam was a famous Egg-a-Day Strain Hen, bred and owned by I. Brooks Clarke, Dept. C., Newark, N. J.

Journal regarding the statements made in the "Maine" bulletin.

While I do not wish to take sides as to whether the bulletin is correct or otherwise, as I have made no definite experiments on that line, and am an amateur in the poultry business, Mr. Stoddard will have to bring some evidence other than his bold assertion to prove his points. His first article proves nothing on the point in question. Denial of a point is neither argument or evidence as to its truth. It is not generally disputed that too much inbreeding will produce undesirable re-

sults, but this is not the point in question. Let Mr. Stoddard bring some evidence to prove his contention. Let him give us the results of careful experiments covering both sides of the case. Practically no one disputes that we will get a mixed lot of offspring from mixed breeding so far as size and color are concerned. But how about eggs? That is the point. Have you, Mr. Stoddard, any definite experiments to bring forth to prove your contention? If so, let us have them. Your last two paragraphs of questions bring up various points, but those questions are not proof. Get "down to brass tacks" and show up if you have anything to show.

Ashland, Wis. Irving C. Smith.

### A FALLACY EXPOSED.

G. C. McKinney, M. D., Doyle, La.

FOR some time past I have read in several poultry journals of the advisability of giving strychnine to poultry for the purpose of killing lice and hawks. From time to time this advice has been given freely in the columns of the poultry press. It is taken for granted that every one knows that strychnine is the active principle of nux vomica, which is the form of the drug which is usually claimed to have been given. Now, according to those who claim to give nux vomica to poultry in order to kill lice and hawks, they feed it to the poultry just as though it were grain or palatable mash.

Experimenting with this drug and its effect on poultry, I found the following:

On September 9, at 7:30 p. m., one-fifth of a grain of strychnine sulphate was given to a vigorous White Minorca cockerel, ten months of age. Visiting the roost at 10:30 the same evening, I found him on the floor in a state of tonic spasm, breathing about one hundred times per minute.

The condition being typical strychnine poisoning, a solution of tannic acid, a chemical antidote, was given, followed by a solution of chloral and sodium bromide, physiological antidotes. At 1 a. m. the muscle spasms were much reduced and breathing slower. At 7 a. m. he appeared better than at 1, but the breathing was of a gasping nature. At 8

## RUDY'S PERFECTION WHITE WYANDOTTES

SUPERIOR TO OTHERS THE ACME OF PERFECTION

### Eggs for Hatching

Get the best you can for your money. Don't buy eggs from questionable stock. They may be somewhat cheaper, but the outcome of the hatch will look the part.

Rudy's Perfection Wyandottes are known all over the country as the peer of the Wyandotte.

Get my mating list—free for the asking—and see the reasonable prices at which you can buy eggs from the Grandest Matings obtainable.

If you want to know all about breeding White Wyandottes, send for my Art Catalog. Absolutely the best book of its kind. Gives full information on how to succeed, how to take care of baby chicks, what to do when your fowls are sick. An article on how to fit birds for the show room is worth dollars to any breeder. Send 10c in stamps to help pay cost of mailing, etc.

Geo. H. Rudy, R. 15, Mattoon, Ill.

a. m. I found him dead, considerable yellowish material having passed from the bowels.

Like cases of strychnine poisoning in the human, unless a chemical antidote is given at once, there is very little hope of recovery, as shown by this case.

The most astonishing thing about this experiment is the size of the dose, as it shows that poultry is even more susceptible to nux vomica than human beings. According to authorities an adult fowl is capable of taking one-third as large a dose of drugs as an adult human. In fact this is the basis of treatment in poultry. Now this would have been equal to a dose of three-fifths of a grain of strychnine for an adult person, and while that size dose would undoubtedly bring on convulsions, it would not as a rule be fatal with the treatment given this cockerel.

In view of this experiment, what is the truth of the matter? Simply this, that as in all other matters of a scientific nature, the evidence of the average person is absolutely worthless. These people who claim to have given nux vomica to poultry in large enough doses to kill lice and hawks without harming the fowls have deliberately falsified—or perhaps they were not intelligent enough to know nux vomica from powdered charcoal or road dust.

#### A PRACTICAL CHICK FOR PRACTICAL FANCIERS.

By S. A. Noftzger.

WHY do we hear this talk about "Fuss and Feathers?" Has the real back-bone—the foundation—the very life or intent of thoroughbred poultry rearing gone to the bow-wows? Are we fanciers truly a lot of ordinary "chicken cranks"—fanatics on the subject?

Or, do we hear this "fuss and feathers" talk from only the uninitiated, who have never really had the pleasure of gathering eggs and feeding the food that made possible their production?

Have we not reached a higher level in the production of thoroughbred poultry than mere feathers? Is it not a fact that the Standard by which all poultry is judged during this day and age, places more value upon shape and carcass measurements than on feathers?

Is it not correct that the Standard is revised every five years by the best qualified practical fanciers of America and do these men not spend weeks of their time in research and investigation that they may be able to change the shape requirements of every Standard breed so as to make possible a fowl of such carcass measurements that it will be better adapted for egg laying or table use?

Most certainly the latter is the case and those who cry "Fuss and Feathers" do so because of ignorance regarding standard poultry requirements and the great work already accomplished by the true fancier of beautiful, practical fowls.

Years have passed, the poultry world has changed its costume several times, since I first undertook the origination of Partridge Plymouth Rocks—a beautiful, practical fancy fowl for practical fanciers.

The pure bred poultry business in those days could scarcely be looked upon as a business, let alone an industry. Today we find the result of those true business men, who were the real practical fan-

cier of the years gone by, is nothing less than a billion dollar industry. Though still in the cradle, it now promises to become the greatest of America's natural industries.

In originating and perfecting the Partridge Plymouth Rock to its present state of excellence, I realize my success depended upon the success of the fowl, on which the best efforts of my life were to be spent.

Years ago we heard the same talk of "chicken cranks," "Fuss and Feathers," etc. These remarks only impelled me further in my determination to some day offer a practical fowl, unexcelled for beauty, hardiness, egg basket, table and ease of rearing.

As to how well my desires were fulfilled by the new beauty breed—the Partridge Plymouth Rock—thousands of breeders can more gracefully testify than I.

There are a few facts that go to show the Partridge Rock chick is in reality "A practical chick for practical fancier" that I wish to mention.

Having the genuine mahogany brown Partridge color, the baby chick is therefore of the same characteristic color found on the newly hatched among practically all our wild game. It is a proven fact that this nature color carries with it—is symbolic of—strength and hardiness.

Beyond any question one of the greatest attributes to the present day world wide popularity of the Partridge Plymouth Rock is the hardiness, strength and quick growing characteristic of the baby chick.

Actual profits is the basis of the stability of the poultry industry. A newly hatched chick is an expense. Profits are dependent upon those that are reared. This being so, it behooves us to consider well the natural hardiness of the fluffy youngsters.

Often we are misled in the belief that the feathered chick can safely be counted a raised chick, only to have a sparrow, hawk or chicken hawk feast upon several of the most promising.

Here again we find the Partridge Rock chick a practical one for, as it roams among the weeds and grasses, the shrubbery and orchards with its coat of beautiful brown, it is not easily discovered by the hawk. As a result, the hawk being strictly a fowl of nature, proceeds along the course of the least resistance, finding it much less difficult to speed on to the neighbors where it can feast upon the light colored youngsters more easily discovered from the distant sky.

Truly the Partridge Plymouth Rock chick is "A Practical Chick for the Practical Fancier."

Fashion Plate, 1st Cockerel, Indianapolis

#### A FIRST EXPERIENCE WITH POULTRY.

A. N. Amateur.

HAVING READ MANY articles of interest written by amateurs, telling of their experiences and success with poultry, has prompted me to write mine. I became infected with the chicken bug and a good attack of indigestion at about the same time. Being employed in an office and not getting the proper amount of exercise in proportion to my appetite, I found it necessary to undertake something that would give me more outdoor exercise.

At this time I had been a reader of the American Poultry Journal for over a year, and naturally my thoughts turned toward chickens as a means of outdoor employment. In the spring of 1911 we moved from our city apartment to a dwelling situated on a good deep lot of land and I immediately got busy working before and after business hours in the work of constructing an open-front house for poultry. In connection with this I made what I call a portable yard, by means of wire fencing five feet high, using one-inch wire mesh at the bottom, and the two-inch mesh wire above the first foot. This fence is so constructed that I can easily swing it around to three sides of the poultry house and thus give the birds a fresh run and grass every few days.

Previous to the time of embarking in the business I had taken a great fancy to the Mottled Anconas and placed my order for baby chicks before the house was finished. The chicks arrived on May 10th, all alive and strong. Of the flock I believe I only killed seven with kindness and I considered that very good for an amateur. Of those that survived a very good per cent were pullets and they began laying on the 17th of October, being just five months and nine days old.

I kept them well supplied with a good

Chas. V. Keeler R. F. D. 11 Winamac, Ind.

variety of grains and fed cabbage in a wire rack hung on the wall within easy reach of all.

One hen became egg-bound during the winter, but finally started laying again, producing a double-yolked egg, and each egg thereafter increasing in size until she laid one six and one-half by eight inches. After that she walked about like a duck for several days and I finally killed her.

All the hens have laid well and I have had excellent reports from eggs sold for hatching. As an experiment I set a hen with fourteen eggs after the cock bird had been in the pen only four days and hatched nine chicks. A number of times I have had a good mother hen bring out thirteen chicks out of fourteen eggs and have had reports of as high as

twenty-seven chicks out of thirty eggs sold for hatching.

In mating up my birds the following spring I followed the rule set forth by many of our large poultrymen, that of mating a two-year-old cock to pullets, to throw a large per cent of females, with the result from this pen, in thirty-eight chicks there were but six cockerels. I believe in the rule.

I have kept an exact account of expenditures from the start and find that I have just about doubled my investment in less than two years, and this I consider very good, since I have only given a little time morning and evening to the work.

The following is the egg record for a pen of twelve hens from October 1, 1911, to September 15, 1912. In April three

of the hens were used for sitting, and in January several of their combs were frozen. It will be seen by this record that the birds averaged 153 eggs each in the eleven months and fifteen days:

October, 1911.....	29
November .....	132
December .....	129
January, 1912 .....	92

## THE BEST RESULTS FOR YOU IN POULTRY RAISING

*Whether you are a professional or an amateur you want the maximum result from the investment of your time and money.*

### "WRIGHT'S NEW BOOK OF POULTRY"

*Is the Key that Unlocks the Door of Poultry Success.*

It is the foremost practical book on Poultry and Poultry-raising that has yet been published, in the opinion of all the leading Poultry Editors and Poultrymen.

The Poultry papers quote from it constantly as the **Authority**. Hundreds of purchasers have written to us, unsolicited, commending it without stint.

#### Will You Examine it at No Expense to You?

We want your permission to place this volume in your hands for **Five Days Free Examination, All Expenses to be Paid by Us.**

Fill out the application form below and mail it to us with 50 cents, and we will send you this book on approval express prepaid.

#### Who Is Lewis Wright?

Lewis Wright wrote his first Poultry book thirty-five years ago. It was called "The Illustrated Book of Poultry." The present work, new throughout, thoroughly modern and up-to-date, is the natural fruit of his long experience in raising and writing about Poultry. He visited hundreds of model plants and interviewed the most successful poultrymen in all parts of the World to secure his data; and his book, first and foremost, is based upon Actual Experience. Mr. Wright was the one Poultry expert selected to write all the Poultry articles for the new 11th edition of the Encyclopedia Britannica, perhaps the greatest honor that could be conferred upon him.

What safer guide than Mr. Wright can you follow to success? Why not take advantage of Mr. Wright's experiences, his mistakes and successes?

The book has chapters on the following subjects and others: Poultry Houses and Runs—The Science of Feeding Poultry—Practical Management and Feeding of Fowls—The Egg and Sitting Hen—Artificial Incubation—Rearing and Care of Chickens—Poultry for the Table—Poultry Farming—Exhibition Poultry and Utility—Pedigree or Line Breeding—Practical Breeding and Rearing of Prize Poultry—Exhibiting—Judging—A chapter on each breed of chicken of all countries, besides chapters on Turkeys—Guinea Fowl—Pea Fowl—Ducks and Ornamental Water Fowl—Geese and Swans—Poultry Diseases and Vices—Vermin.

#### Let Us Make Our Offer Plain To You.

The 50c you remit with the Application Form is simply an evidence of good faith; it is placed to your credit. The signing of the Form does not obligate you in any way to purchase the book. If you decide to keep it,

you need not remit until the next monthly payment of \$1.00 is due. If unsatisfactory, the book need simply be held awaiting our instructions, and we will at once refund the 50 cents.

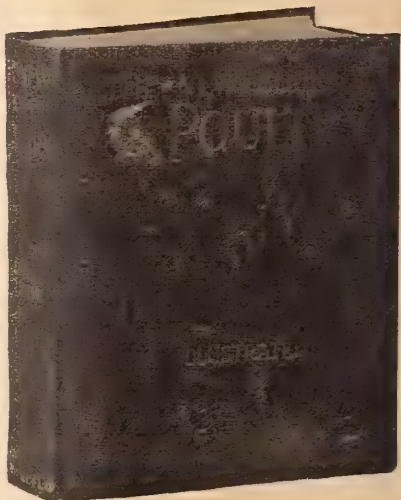

#### We Could Not Make It Easier For You To Inspect This Book

before buying; and the present plan of sale is based upon our unbounded confidence in the very great practical value and usefulness of this work to you. An examination, moreover, will enable you to judge its merits far better than any description from us. But let us add a few details.

#### Special Offer To Responsible Readers:

Let use send you this great work on approval. We want you to examine it thoroughly before deciding. We want you to judge for yourself its great, practical, money-making value to you. The price is only \$8.50. Just send us 50c with the coupon opposite and you will receive the book, carriage prepaid. If after five days you don't want it, simply notify us and hold subject to our order. We will then refund your money. If you keep it pay us the balance \$1 a month until settled in full. [If you wish to pay us cash deduct 5%.]

The present stock of the work is limited, and it takes a period of time to reprint. May we ask, therefore, that you mail the Application Form at the **earliest possible moment**, so that you may avoid the necessary delay should we be out of stock later? The books will be shipped out on approval in the order of the receipt of the Application Forms.

#### Beautifully Printed and Illustrated and Strongly Bound

Forty-five full page plates in colors and black-and-white of this splendid work, all by J. W. Ludlow; and there are innumerable pictures throughout the text. Finely printed in a large, clear, readable type and bound in stout, durable cloth binding with lettering in gold; gilt edges on three sides. Size of volume 9 1/2 x 11 1/2. Weight, seven pounds.

#### AMERICAN POULTRY JOURNAL, 542 So. Dearborn St., Chicago

Gentlemen:—I send you herewith 50c, for which kindly send me, carriage prepaid, one copy of Lewis Wright's "New Book of Poultry." It is understood I may examine this work five days, and if I do not wish to keep it I agree to notify you and hold subject to your order, and you are to refund my money. If I decide to keep it I agree to pay the balance of \$8 in monthly installments of \$1 each until settled in full.

## Good Things for Everybody

Helen F. Woods  
Editor

### THE GARDEN BEAUTIFUL.

Being An Account of the Woman With  
the Hoe and Her Success With  
Gladioli.

Harriet W. Ashby.

HAVING A FRONTAGE of 600 feet with an equal distance from the paved street, a speedway to one of our country clubs, we felt that it behooved us to put this space in something which would help pay the taxes, and at the same time not mar the appearance of our home. The greater part was put in alfalfa, but I was ambitious to have a peony hedge on each side of the driveway, and enough of some variety of flowers to not only satisfy the eye, but to bring returns substantial enough to pay for themselves in a season.

"Will gladioli pay taxes on the land they occupy?" I asked our florist. "Yes," he replied, "if you get the good sorts. I wouldn't give two cents a peck for cheap mixtures yielding small, short-stemmed blossoms, but get enough of two good varieties, say Mrs. Francis King and America, to make it worth while for a florist to buy your bulbs and I'll guarantee they'll more than pay the taxes. The flowers will pay for the use of the land and labor."

So I ordered 1,000 Mrs. Francis King, and 500 America gladioli bulbs, good bulbs which cost me practically fifty dollars, and followed the florist's directions as to culture.

In early spring the ground was covered with well-rooted manure, plowed deep and harrowed several times. Three equal plantings of the bulbs were made, the first May 15, the last about June 10. (Another year I would make one planting July 1 as there is more demand for the later flowers). For planting, the plow marked out a furrow in which I put the bulbs down firmly, stem end up, about 6 inches deep and 10 inches apart in the row. The rows were 3 feet apart. With less land I would put the bulbs 3 inches apart in the row and the rows 18 inches apart. The object in planting deep is two-fold; to plant deep enough for the stalk to stand firmly without staking, and to insure abundant earth covering to the new bulb, for each season the bulb planted dies, and a new bulb forms on top. Sometimes two new bulbs form from the old one, and it is these bulbs which blossom. If not deep enough to be firmly fixed, the heavy blossoms fairly wrench the bulb from the ground. I planted in full exposure to sun where the roots would not be shaded by foliage. The bulbs were hardly covered until the "velvet weed," alias the "button weed," alias the "pie print" arrived. When I turned back from hoeing out a row, I met reinforcements of the enemy on my newly-hoed ground.

Weeds were not all I had to contend

with in the gladioli bed. After every rain our soil would pack, becoming almost as hard as clay, sometimes it cracked open in ziz-zag lines which were my despair. We had the soil analyzed. "Fine," said the scientist who analyzed it, "fine, the sample shows 600 pounds of nitrogen per surface acre! How much is available I can't say, but with more humus you could grow anything."

"Where can I get humus?"

He looked at me pityingly (Scientists have no conception of the depth of ignorance of the amateur gardener). "Humus is vegetable matter," he explained. Well-rotted manure provides humus quicker than anything else, but the same results come in time from a green crop plowed under, clover, peas

or alfalfa are specially good."

"But we have a crop of gladioli on the land."

"In that case, try a mulch, and keep the ground mellow with a hoe." A load of dead leaves—a 14-inch wagon box packed as solid as it could hold—was brought from the woods and these spread between the rows and gradually raked into the ground relieved the packing greatly.

Then another difficulty presented itself, the tips of the leaves began to turn yellow before the plants blossomed. Again the scientist was called in. He thought the need of a dressing of agricultural lime was indicated. With the lime treatment this yellowness disappeared. The scientist chuckled delightedly when we told him (it seems

## ONEIDA INDIAN REDS

The Strain that has made the Breed Famous. Our Rose and Single Comb Reds made the most sensational win by winning more prizes than all competitors combined. This we consider the greatest triumph of the show season at the Pittsburg Fanciers' Club Show, February 17th to 22d. We made ten entries in Rose Comb Reds and one pen of Single Comb Reds. We won on Rose Combs, 1st and 3rd cocks, 1st and 4th cockerels, 2d and 3rd hens, 1st and 4th pullets; 2d on single comb pen, 40 points for best display. All other exhibitors combined winning 43 points. We have stock, eggs and baby chicks for sale. Illustrated catalogue free.

TIFFIN CHICK HATCHERY Dept. A Tiffin, Ohio

curious to me that scientists sometimes are so happy at finding a theory upheld by practice. One is tempted to wonder if they get more than they expect).

It seemed a long time before the first blossom came, then we had a dozen Mrs. Francis King at once—glorious bits of rosy color on stalks from three to four feet long. When fifty were out, we sought a market. The florists at that time were selling the blossoms at \$1 per dozen. Although ours were larger and finer than the blossoms they offered, we were asked to take 36 cents by one florist, others didn't want them at any price. They "ordered all their flowers from Chicago until their own field blossoms were out." They fairly sniffed at the idea of an amateur presuming to grow finer blossoms than came from Chicago, and gave the credit entirely to the soil. Then our twelve year old boy took them to our city market where he was able to sell a limited quantity at from five to ten cents per stalk, reducing his prices on large orders.

Never were more glorious blossoms, the delicate beauty of the pink America rivalled the regal splendor of Mrs. Francis King—a rosy red. The flowers were both beautiful and lasting, keeping in the house for a week or more, and often growing more beautiful with the fading of the flowers. Some of the Kings had three blossom stalks on the one stem. When cutting for market we cut with long stem, retaining enough foliage to feed the bulb, if for the house I tried to save the second blossom which while not quite so well filled as the first was especially beautiful in the tip blossoms.

The children filled the house with gladioli and carried them to the neighbors and hospital. From time to time when I saw our wealth of bloom I sighed for a market which would take all our surplus, yet when at the close of the blossoming season a call came for all the blossoms we had, I did not find the satisfaction in seeing the flowers go that I expected. On the

contrary, while the buyer snipped right and left, emptied my vases and lamented that he had not come earlier, in my heart I resented his presence in the bed from which I had allowed no one to cull but myself, and I realized that I didn't regret that the market had not taken all of our blossoms. The pleasure of having a satisfying quantity of beautiful flowers was worth more to the family than the money from their sale. The children had given away without stint, they had come to look upon this flower as a part of the higher living within their reach. The elevating influence of my gladioli equalled that of music or art.

We took a hundred stalks to our state fair, winning six dollars in prizes, and were told that our blossoms were equal to those shown by professionals at the Chicago gladioli show. This was due to the quality of the bulbs, the character of the soil, and—the woman with the hoe.

We harvested the bulbs in late October, before danger of heavy frost, after the leaves had turned yellow and the bulbs ripened. From the 1,000 Mrs. Francis King we harvested 1,250 blooming size bulbs with from 10 to 35 korms on each bulb. After digging we left them in the sun and air to dry for a day or so, covering with carpets at night, then we cut the stalks, and spread on shelves till thoroughly cured when we put them in barrels in a cool dry potato cellar. From the 500 Americas we harvested but 508 blooming sized bulbs and from ten to twenty-five korms. It may be that the America is not a shy bearer with others, but it was with us.

We let the korms dry with the dirt, keeping them separate of course. In early May we will plant them and get blooming bulbs for next year, first removing the outer skin (if our patience holds out, as our florist says the removal of this skin is conducive to better growth). Our receipts from the flowers, counting the premium money, was \$18. I used the increase in bulbs largely, as Christmas gifts, wrapping

the bulbs in different colored papers, and packing in a cheap but pretty basket. Our profit will come when the korms are of a size to sell although we cannot hope to get anything like what we paid for the bulbs as the supply is increasing too rapidly. For instance, two years ago a friend paid a dollar each for ten bulbs of the Nia-

gara. The ten gave twelve blooming sized bulbs this past year and one hundred and fifty korms. The past spring he picked off the tough outer skin from each korm and when he dug them in the fall he had about one hundred bulbs of blooming size which he has already sold for twenty-five cents each. Bulbs which multiply rapidly get cheaper from year to year, poor multipliers like the Contrast continue high priced.

The gladioli is called the "Poor Man's Orchid" (although this title is disputed by the Iris) because of its coloring and the fact that it can be had at a price within the reach of every one. With the gladioli you not only eat your cake in the shape of beautiful flowers, but you keep it as well, because you get back your seed and some over each year, and a bountiful harvest the second year. Then, too, it is a flower which is adapted to the poultry breeders' garden because it is not so apt to be injured by fowls, especially if planted deep. Ducks, however, are destruction to the plants. The delight of our Indian Runners last summer was to escape from their yard and climb a gladioli, teeter tottering on the stalks and tips of the leaves in an endeavor to force the bulb up.

Whether the gladioli is a profitable crop to grow for market depends on the market, but no flower will give the owner more joy than the gladioli. It can be had in all shades and at all prices. My order for my own pleasure this year includes Niagara, Contrast, Rochester White, Taconic, Scarlet Velvet, Smokey Violet, Queenly and Europa.

#### Rhubarb Conserve.

E. H. J.

3½ lbs. rhubarb (chopped).  
2 lemons (grated rind and juice).  
3 lbs. sugar.

The rhubarb should be picked when tender and cut into inch pieces and allowed to cook together with the sugar and lemon for about half an hour. Then add one-fourth pound of blanched and shredded almonds and one-fourth cup of preserved orange peel, shaved in thin pieces and allow to cook another half hour.

#### Boston Brown Bread.

E. H. J.

Sift one cup each of yellow corn-meal and rye meal and half a teaspoonful of salt. Add the well beaten yolks of two eggs and half a cup of molasses and a cup and one-half of thick cream. Fold in the whites of the eggs and turn into a buttered mold and steam four hours. Place in the oven to dry off before serving.

#### Apricot Sherbet.

E. H. J.

Drain the juice from a can of apricots and remove the pulp from the skins and cut up in small pieces. Add this to the syrup, together with two cups of sugar and a quart of cold water. Stir until the sugar is thoroughly dissolved, and freeze.

#### Orange and Rhubarb Marmalade.

E. H. J.

Peel the rhubarb and cut into inch pieces, using four cups of rhubarb to three good sized oranges and seven cups of sugar. Peel the oranges, removing all the inner white from under the skin, remove also the seeds and grind up the remainder of the orange in a meat chopper. Cook slowly for about three-fourths of an hour.

## TO AMERICAN BLACK MINORCA CLUB MEMBERS.

For a number of years the American Black Minorca Club, which is recognized as the leading specialty club devoted to S. C. Black Minorcas, has only been giving one show a year, that being wherever the annual meeting of the club was held. I have been an officer in the club for the past seven years, and during that time I have felt the great need in giving S. C. Black Minorcas a boom which they most decidedly deserve, and I felt that the best way to bring that about was to arrange for holding two club shows a year, one to be held in the fall and the other in the winter in connection with the annual meeting, and I brought this matter to the attention of the club at the annual meeting held at Philadelphia and also at the recent annual meeting of the club at Baltimore, and stated that an excellent idea for the fall show would be if the club members would each contribute 50 cents or \$1 to a fund to be used for purchasing a handsome silver

cup to be known as "The American Black Minorca Club Challenge Cup," this cup to be competed for once each year at a show to be decided upon by the entire membership of the club and to be awarded to the club member winning the greatest number of points at that show, the cup to remain the property of the club, but the winner to have the custody of same from the time it was won until the next show where the cup was to be competed for. However, there is always such a small representation of our members present at the annual meetings that no definite action on this important matter has ever been taken; therefore, since the Baltimore meeting I have taken up with the newly elected board of directors, requesting them to place the matter before the club members and offered to make a liberal contribution toward the fund myself, but for some reason that I am unable to explain practically no attention has been paid to this suggestion by the board, as I only received a letter from one member of the board regarding the matter. I have therefore

decided to send a communication to the poultry journals on this subject, hoping in that way to reach the members of the club and the many other Minorca breeders who are not members of the club, and to all Minorca fanciers who are interested in the purchase of this trophy I would suggest that they send their contributions direct to me and I will start the fund by offering to contribute \$25 toward it myself.

The club is now in a flourishing condition, and to all Minorca breeders who are not members of our club I would suggest that they immediately send their applications to Marcus A. Northup, secretary-treasurer, Orangeburg, Rockland county, N. Y.

Yours very truly,  
Frank McGrann.

Lancaster Pa.

## AMERICAN CAMPINE CLUB HAS ADOPTED A STANDARD.

On February 21, 1913, a revised standard was sent to members of the American Campine Club for a club vote

**R. C. Caldwell Ships Baby Chicks of Quality on short notice. See pp. 825**

# WHITE ORPINGTONS

## Superb Type and Superior Quality

### January and February Hatched Youngsters For Sale

Never have I had young chicks to prove more completely the claim made for them regarding **type** and **quality** than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in January, February and March. As it is possible to detect

any minor faults in birds after they are eight weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced. These will be ready for delivery in June—large, vigorous, massive birds raised on acres of blue grass sod.

### Order Stock at Bargain Prices

Due to the fact that I must make room for younger stock, it will be necessary to dispose of a number of **hens** and **cocks** on the breaking up of my breeding pens the first of June. These, of course, must go at attractive prices; and here is an opportunity to get some foundation stock the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 8,000-acre Elmendorf Farm.

Eggs at \$5, \$10 and \$20 a setting, and would urge all customers to place orders for same at as early a date as possible in order to get their choice of matings as the breeding pens will soon have to be broken.

An extra fine line of Duroc-Jersey young pigs for sale.

**Russell Cave Poultry Farm** Elmendorf Stock Farm  
Louis Lee Haggin, Prop. R. 3, Box 1025, Lexington, Ky.

on its adoption, the polls remaining open until March 7th. The vote resulted as follows: Yes, 136 votes; no, 7 votes.

Three parties voting no stated that they did so on account of the weight clause.

A number of parties voting yes commented very favorably upon the standard.

Each new member of the club is entitled to one of these standards. These Campine standards can be secured by non-members of the club at 10 cents each.

At the present time the club has a membership of 322. The secretary is very anxious to increase this membership to at least 1,000 members by January 1, 1914.

The secretary requests that all members of the club and all interested in the Campines assist in increasing our membership to the thousand mark.

M. R. Jacobus, Secy.-Treas.  
Ridgefield, N. J.

#### AMERICAN BARRED PLYMOUTH. ROCK CLUB.

This will be the last chance to notify all the members who may have anything to send in for the club catalogue which will be issued this spring to let me hear from them at once. Also all those wishing to join the club should do so at once, so that their names may appear in the catalogue. Initiation fee and dues, \$1.

The subject of the new Standard is being taken up by the club, and the president has appointed a committee from the club to revise our Standard, the same to be voted on by the club members before it is presented at the next meeting of the American Poultry Association. All members are invited to express their opinion on this subject and send the same in to the secretary, to be submitted to the committee. Join the club and help the good work along.

Henry D. Riley, Secretary.  
Strafford, Pa.

#### ATTENTION, BLACK ORPINGTON BREEDERS OF VIRGINIA.

The time has come when we, the American Black Orpington Club, Virginia branch, must try our very best to progress. Progress only can be obtained by the co-operation of members.

If the members of our club will not lend a hand to our advancement, the officers can do nothing.

There is an old and well-worn saying, but still useful, that of our patriot, Benjamin Franklin, who remarked in the course of a quarrel among the members of a meeting, "If we do not all hang together we shall hang separately."

Club members, there is a wealth of meaning to you in that old speech; if we do not co-operate and help each other and operate our club as one body, one person, we, too, shall, in another manner "hang separately."

What can we, the officers, do without your loyal support? The world could go on minus any kings or presidents, but what could these heads of nations do without the people?

The same rule applies to you fellow-member; "get in the swim," so to speak, make yourself heard in the cause and advancement of our club; it cannot

Hustle, go after some of your friends, get them into the club; in fact, put all this talk in one word, "Boost," and boost well, but mind who you are boosting, "American Black Orpington Club, Virginia branch, for boys, for girls, for women, for men, for the betterment of all."

Anyone desirous of joining the American Black Orpington Club, Virginia branch, can do so by addressing W. C. Lassiter, vice-president; care Lassiter Orpington Yards, Highland Park, Richmond, Va.

#### JACKSON COUNTY POULTRY ASSOCIATION, MURPHYSBORO, ILL.

This association has chosen dates of December 16, 17, 18, 19, 1913, for the next annual show. Judge Joseph Dagle, of Richland, Iowa, has been engaged to place the awards. The association will offer ten fine silver cups and a large assortment of valuable merchandise specials aside from the regular premiums; the association will offer premiums on mated breeding pens in both cockerel and pullet matings in the Barred Rock class. There was a large exhibit at the last show, and the management expect to run the entries up to 1,000 birds this season. Premium list will be out early.

Jean Dagle, Secretary.

Murphysboro, Ill.

#### NEW YORK OPENS SEASON.

**Greater New York Fair and Exposition  
August 1-31, 1913—Of Great Interest to Poultry, Pigeon and Bantam Breeders.**

The Greater New York Fair and Exposition will be held during the month of August, 1913, at Empire City Park, New York City, which is only twenty to forty minutes' ride from the heart of a city of five million people, and within three hours' ride of a population of ten million people.

There will be three big poultry events held in connection with this great National Fair and Exposition, in a splendidly equipped building designed especially for the purpose and cooped with the most up-to-date patterned exhibition coops.

The Greater New York Fair and Exposition Poultry Show will be held the week of August 4-9.

The Greater New York Fair and Exposition Pigeon Show will be held the week of August 11-16, and

The Greater New York Fair and Exposition Bantam Show will be held the week of August 18-23.

Breeders and exhibitors in every part of the country should make a note of these dates, as there will be no other state fair held during the progress of this show. A winning at New York is

a valuable asset, and from all indications these three events will be the biggest exhibitions of their kind ever staged in this country. Full particulars in next month's poultry journals. Address John A. Murkin, superintendent, Nashville, Tenn., for further information.

#### THE BLACK LANGSHAN SPECIALTY CLUB.

Do you realize the fact that the text or reading matter of the Standard of Perfection is to be revised shortly, also that there will be a number of changes made in the ideal illustrations as now published. Perhaps the changes will not be important in our breed. Several sub-committees are collecting data and suggestions, with a view to improving the word descriptions.

I believe in active, progressive specialty clubs, and I believe also that well-conducted specialty clubs should have an important say-so when it comes to fixing the standard requirements for the variety they represent. We should be a truly representative specialty club and we should look closely after the welfare of our breed; especially so at each time of standard revision.

The existence of several specialty clubs, each devoted to the Langshan, should be encouraged, the clubs to work in different sections of the United States and Canada; but all such clubs

FIRST PRIZE WHITE PLY ROCK COCK AND HEN  
AT NAT. WHITE ROCK CLUB MEET SPRINGFIELD ILL. JAN. 1913  
BRED AND OWNED BY H. W. HALBACH WATERFORD WIS.

should work unitedly and really form one country-wide organization.

I think they should be conducted on a similar plan to the state branches of the A. P. A.

It is impossible to stand still, no matter what business or enterprise you are in; you must go forward or backward.

Are you going or coming?

If you are lending your support and taking an active interest in the specialty club that represents your breed; you are not only going forward yourself, but are taking others with you and are causing the advancement of poultry culture in general.

The membership dues are \$1 per year. If you are not a member, send me your application.

John A. Rhodes,  
Cedar Rapids, Iowa. Secretary.

#### ATTENTION, BREEDERS AND JUDGES.

As a member of the revision committee for the 1915 Standard, I would be glad to receive any suggestions of desired changes to be offered in the next Standard. The committee solicits these suggestions from breeders everywhere, and you can rest assured that they will be given due consideration by the committee when they meet in May.

Would also like to receive any suggestions from judges, and we feel sure that the judges have a better opportunity of discovering omissions and mistakes in the Standard than almost anyone else. We would ask the breeders in all sections of the country to not delay this matter, but to at once forward same to W. C. Pierce, 825 State Life Building, Indianapolis, Ind.

#### ANNUAL MEETING NATIONAL WHITE WYANDOTTE CLUB.

The annual meeting of the National White Wyandotte Club was held in connection with the Albany, N. Y., show on January 15, 1913.

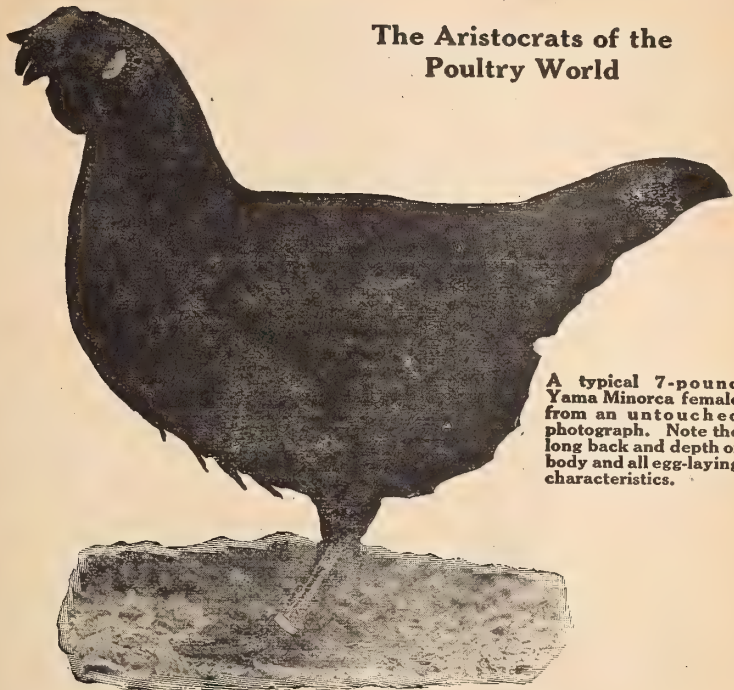

The following officers were elected for the ensuing year: President, L. J. Demberger, Stewartsville, Ind.; vice-president, John S. Martin, Port Dover, Ont.; secretary-treasurer, A. J. Gies, Delmar, N. Y. Executive committee, F. B. Williams, Naugatuck, Conn.; A. H. Emch, Toledo, Ohio; R. E. Bruce, New Orleans, La.; A. J. Smith, Cedar Rapids, Iowa; Chas. D. Cleveland, Eatontown, N. J.

The meeting very clearly demonstrated that renewed and very enthusiastic interest is being taken in the club by its members and indications point to another very good year for White Wyandottes.

Entries of White Wyandottes in practically all exhibitions during the past year have increased very much in number, and the average quality is decidedly better.

The club is in a very prosperous and flourishing condition, and will offer this year, at many shows all over the country, handsome club ribbons as special prizes, that will be eagerly sought after, as they will be one of the handsomest ribbons ever offered by a specialty club. In addition, the state cups offered will be better than ever, and it is hoped to offer very liberal cash prizes at a number of the large winter shows.

Every representative White Wyandotte breeder ought to be a member of this live club. The dues are \$1 a year,

The Aristocrats of the Poultry World

A typical 7-pound Yama Minorca female from an untouched photograph. Note the long back and depth of body and all egg-laying characteristics.

## Yama Single Comb Black Minorcas

WE believe there have never been put together twelve better pens of Minorcas. Every one is headed by prize-winning males—and one of the best judges of Minorcas wrote us on February 17: "I would like to show six of your Minorca cocks against any six in the country."

Of the 51 cockerels and pullets we have exhibited this Winter at four shows, 42 were placed and EVERY ONE WAS BRED AT YAMA FARMS.

Eggs for hatching from these pens, \$10 a setting.

Utility Minorca eggs for setting, from brothers and sisters of these selected pens, \$3 a setting, \$15 a hundred.

At Madison Square Garden, N. Y., December 30 to January 4, 1913, Yama Farms won on S. C. Black Minorcas, first, third and fifth cocks; first, fourth and fifth cockerels; first, fourth and fifth pullets; third hen; first and fourth pens; four firsts out of a possible five.

At the last Madison Square Garden Show, we had more Barred Plymouth Rocks placed than any other breeder. There IS no better pullet-mating line than we have to-day and our cockerel matings are headed by such great birds as Cock Robin, the first cockerel and championship male at Buffalo, January 1913.

See from our catalogue and show records the kind of Barred Rocks we are breeding. We know the full pedigree of every bird in our pens and have given much care and attention to these matings.

Eggs for hatching from pens Nos. 16 to 22, \$10 a setting, as they run. Eggs, \$1 each if all from one pen.

Utility Barred Rock eggs, \$3 a setting, \$15 a hundred.

Send for our catalogue illustrated from untouched photographs, also our 1913 mating list.

## YAMA FARMS

Napanoch, Ulster County, New York

Newton Cosh, Manager Poultry Department

but applications received now, accompanied by \$1, will secure a paid-up membership until October, 1914. If you are a breeder of White Wyandottes, and are not a member of the club, you cannot afford to let this opportunity of joining go by.

The handsome Year Book of the National White Wyandotte Club has just been issued, and you can secure a copy of same and full particulars relative to the club from A. J. Gies, Delmar, N. Y.

Eatontown, N. J., April 19, 1913.  
American Poultry Journal.  
Gentlemen: As previously announced

in the press, the board of directors of the New York Poultry, Pigeon and Pet Stock Association, Limited, has elected me to the office of secretary and superintendent of the Madison Square Garden show.

I am to succeed Mr. H. V. Crawford, who for twenty-one years has had charge of this, the greatest of all American poultry exhibitions, and whose skillful management has made it what it is today.

As Mr. Crawford's friend and admirer, and as an exhibitor under him for the past six years, I honor him for the great work he has done and feel that he has set a standard hard to equal.

The aim of the Madison Square Garden show is to be the greatest quality show of America, just as is the Crystal Palace the greatest in England; in the past the ideal has been realized at the Garden, and I shall endeavor to maintain this standard. In conducting the future exhibitions I pledge myself to the following:

1. A modern and up-to-date show, elegant in appearance and convenient for the exhibitors.
2. A policy by which the best birds will win, regardless of who shows them.
3. Uniform and absolute enforcement of the rules.
4. A spirit in which I will endeavor

# OPEN-AIR POULTRY HOUSES FOR ALL CLIMATES

*By Dr. Prince T. Woods*  
America's Leading Authority on Practical Poultry Keeping

The best house book ever published. Now ready for delivery. Be sure to read it before you build or make alterations in your poultry houses. Just out. 88 pages, 46 illustrations and 5½x8 inches in size.

A WELL WRITTEN, WELL PRINTED, WELL BOUND (in cloth)—a REAL BOOK, not a pamphlet or catalog. Just what you are looking for if you want to be successful with poultry. All NEW. Special illustrations from pen drawings and from actual photographs of construction work. Plainly worded. Easily understood. Tells plainly how to build and what to build so that anyone at all used to handling tools can build a good practical open-front poultry house.

## The Three Best "Fresh-Air" Poultry Houses

Tells how to build the kind of houses that the most successful breeders all over the country are building and recommending. Government workers favor these open-air houses. The "Fresh-air House" has come to stay and you will want to build one. It means Better Fowls, Freedom from Disease in the Flocks, Better Egg Yield, Better Fertility, Better Chicks.

## No Matter Where You Live, If You Keep Poultry You Need This Book

There are nine chapters and every one of them full of live interest and helpful information. Just look over the table of contents:

Chapter I—**Sunlight and Fresh Air.** Importance of pure open air both day and night for all domestic poultry. Relation of sunlight and fresh air to health and vitality. Nature's best aid in the prevention of disease.

Chapter II—**Why Use Open-Front Houses.** A few more reasons why you should use open-front open-air houses for the comfort and well being of your fowls as well as the betterment of your profits.

Chapter III—**Hints and Helps on Building.** Tools and amount of experience required. Materials. Suggestions for saving cost, floors, frame, eaves; shingles or roofing. Portable or permanent buildings. Foundations.

Chapter IV—**Location of Poultry Houses.** Land. How to face the building. Relation to surrounding country. Prevailing winds and wind breaks. Continuous or colony buildings. Yards.

Chapter V—**Dr. P. T. Woods' Improved Open-Air Poultry House.** New descriptive photographic illustrations showing how to build and actual construction of house built to illustrate this

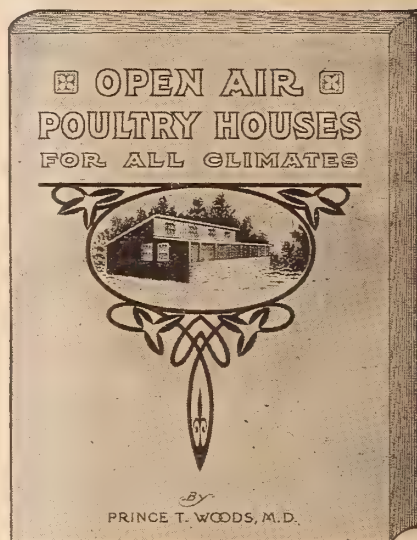

book and now being successfully used to winter 100 valuable White Plymouth Rock breeders. Dimensions of buildings. Suggestions for building on colony or continuous plan. Building instructions and list of material required for house to be boarded in, up and down.

Chapter VI—**Another Plan for Dr. Woods' House.** Line drawings showing plans and detail of frame. House to be boarded horizontally. How to build. List of material required. Complete building PLANS.

Chapter VII—**The Gillette Open-Air House.** The house used in the International Laying Competition. Description, plans and list of material required.

Chapter VIII—**H. H. Stoddard's Open-Air Cage Roost.** A protected outdoor roost for fowls in warm or hot, dry climates where no houses are needed. Diagrams showing two types of cage roosts. Night quarters which help solve the stickfast flea problem and afford greater comfort for fowls in tropical and semi-tropical climates. Rain tight roof may be provided where frequent heavy rains prevail.

Chapter IX—**The Tolman House.** Brief description and some views of this pioneer among modern "fresh-air" houses.

## Does This Mean Anything to You? Greater Comfort for Your Fowls, Better Fowls, Better Returns, Bigger Profits

If it does appeal to you, then you want this book on Open-Air Houses. If it does not appeal to you, better read it and find out what others are winning success with. Fresh-air methods have helped others to become successful and make bigger profits. WHY NOT YOU?

Price of "Open-Air Poultry Houses for All Climates," 75c Postpaid. With American Poultry Journal, One Year, \$1.40. Remember Cloth Bound, 9 Chapters, Profusely Illustrated, on High Grade Paper, Only 75c. Canadian Subscription and Book, \$1.65; Foreign, \$1.90

American Poultry Journal Pub. Co., 542 So. Dearborn St., Chicago, Illinois

to meet the exhibitors half way on any reasonable ground.

I have in mind certain amendments of the rules, as well as some changes in the arrangements, all of which will be announced somewhat later, and I can only say just at this moment that the dates will be from December 31, 1913, to January 5, 1914, inclusive—this will mean that the exhibition will be open on Sunday and thus afford the very busy classes an opportunity to view the show, and it will also mean that exhibitors will have ample time during the week days to ship the birds to the show and to secure their arrival home.

I have much to learn, and must ask that all bear with me until I am in full command of the reins of my office. If I can hold the confidence of the exhibitors I shall be satisfied, and my only regret is that I can no longer continue to be an exhibitor myself at America's greatest show. Yours very truly,  
Charles D. Cleveland.

Don't fail to send for the summer sale list just issued by Guy Daily, Jeffersonville, Ind. He is offering some grand bargains in Mature White Plymouth Rocks.

#### GREAT INTERNATIONAL SHOW.

The stockholders of the great International Show of Buffalo, N. Y., held their annual meeting March 14 and re-elected the same management: Mr. J. F. Knox, president; G. M. Soverhill, vice-president; Dr. S. A. Merkley, secretary, and the same board of directors.

The 1913 show was a huge success in every way, and an effort will be made to make the 1914 show, which will be held January 12 to 17, still bigger and better if possible.

Resolutions were adopted thanking the Buffalo Poultry and Pigeon Club, the Chamber of Commerce, and hundreds of Buffalo business men for their able assistance in making the Buffalo show one of the great shows of the country.

At the annual meeting of the Southwestern Minnesota Poultry Association the following officers were elected for the ensuing year: President, John A. Kennedy; vice-president, D. L. Williams; superintendent, W. N. Williams; treasurer, J. W. Flathers; secretary, Clarence A. Boyd. The next annual show will be held at Rochester, Minn., from December 3 to 6, 1913, and Ralph Whitney will judge.

Clarence A. Boyd, Secretary.  
Rochester, Minn.

The Forest City Fair, which will hold its inaugural exhibition August 25-30, 1913, has prepared for a poultry show which will be second to none. The premium offerings amount to more than \$3,000, and the classification is strictly up to date. Mr. Shepard Strong, of Cleveland, well and favorably known as a fancier and exhibitor, will have immediate charge of the show, and has given a great deal of time and thought to the preparation of the prize list. The result of his labors is, I believe, a list that will be much more pleasing to exhibitors than the average list of the state fairs. For further information address The Forest City Fair,

H. J. Kline, General Manager.  
North Randall, Ohio.

## CRETACEOUS WHITE WYANDOTTES

The sky is the limit of their quality. Eggs—Eggs—Eggs. Clean sweep at the big shows. First pen Cleveland, O. All firsts Wellington, O. Silver cup for best display Wyandottes. Silver cup and specials for best pen in American class. Mating list.

## THE PROFITABLE CAPON.

HERE is today no more profitable source of revenue open to the American poultry raiser than the capon. When the ease and quickness of the operation is considered, the fact that anyone can become an expert caponizer with a little experience, and the further advantage that the high priced capon is merely the transformation of a cockerel that would have been

good caponizing set is about the only real essential, as the capons require no special quarters, nor particular feed, nor any more time and attention than an equal number of cockerels. In fact, they are far less trouble than the rangy, quarrelsome cocks. Every poultry owner should investigate the possibilities of capon culture—it is a field in which there is little competition and great profits.

The prime advantage of the capon is,

regardless of season, and can be handled in connection with fancy trade and hotels to bring the very highest profits. It should be remembered, also, that capons weigh from 8 to 10 pounds and over, while ordinary poultry will not tip the scales more than half as much. Many successful capon raisers state that they get 100% profit from their capons, considering only the actual cash outlay involved.

The institution of a capon department on the commercial poultry plant means also that a more rigid culling of cockerels can be made, because the culls can be converted into capons and sold for a good price, whereas at certain seasons the cockerels bring in no profit, and are often left in the flock. The coming of the capon will mean an improved stock at no loss, but even an increase in profit.

## Important Considerations.

There are a number of questions usually raised by the poultryman interested in capon raising, of which the most important are: Can I easily do it myself? What is the best time to caponize? Will the section in which my place is located affect my market?

Answering the first question; it can be said that any man with ordinary intelligence can learn to caponize quickly and efficiently in a short time. A few hours spent learning the directions, a few experiments to give the knack, and the rest is a mere matter of experience. The beginner will probably kill two or three birds to start with, but as a cockerel killed in this way is just as good for market as one killed in the ordinary manner, there is nothing lost. The first bird may take fifteen or twenty minutes for a satisfactory job, but very soon it will require only three or four minutes. Expert caponizers turn out a bird in two minutes and even less. No particular knowledge or experience is necessary to caponize well, nor very much time. Anyone can do it. It is just a simple surgical operation, requiring chiefly good instruments, a little care and cleanliness.

As to the time to caponize, this depends more on the size of the cockerel than the age. In general, the bird should be from two to three months old—never more than six months—and should weigh from one to two pounds. Most of the capons are made in the months from April to October, for the reason that

Sicilian Buttercup pullet, "Princess Lunette," winner of first at six shows this season. Bred by Isaac F. Tillinghast, Factoryville, Pa.

sold at a very low price, it is hard to realize that the demand for capons is never quite filled, and that more poultrymen do not take up this extremely profitable line.

Capon raising can be taken up as a side line on any poultry plant with hardly any increase in equipment and without necessitating a greater cost of maintenance. The purchase of a

of course, the high price it brings, and the excellent market conditions that attend its sale. Ordinary dressed poultry will average anywhere from ten to fifteen cents a pound, according to season, and often the poultryman encounters adverse market conditions that result in a very small margin of profit. The dressed capon, however, commands from 25 to 35 cents a pound, almost

# CHAMPION BUFF WYANDOTTES

(America's Great General Purpose Fowl)

AS TO QUALITY—Champion Buff Wyandottes won 30 out of a possible 32 first prizes at Chicago, Indianapolis, Nashville, Cincinnati, Hamilton, during 1912.

AS TO PRODUCTIVENESS—Champion Buff Wyandottes averaged 22 eggs per hen during the month of March, 1913.

If you want to win the blue ribbons next winter, or if you would like your egg basket full during the entire year, raise Champion Buff Wyandottes, America's great general purpose fowl.

Every bird and every egg we sell is fully guaranteed. You can't lose if you raise Champion Buff Wyandottes.

Besuden Bros. : R. W. Sturtevant, Manager : P. O. Box 359B, Cincinnati, Ohio

spring chickens arrive at the proper weight for caponizing during these months, and also because capons made during this period arrive at the proper weight for market from November to May, at which time the demand for them is greatest and prices highest.

There is not, however, any reason for selecting a particular season for caponizing, and the only reason that capons appear on the market at certain well-defined periods of the year is because of the demand exceeding the supply and the comparatively few large capon plants in existence. Capons should be on the market all the year, and the time is coming when they will be. A bird can be caponized at any season with good re-

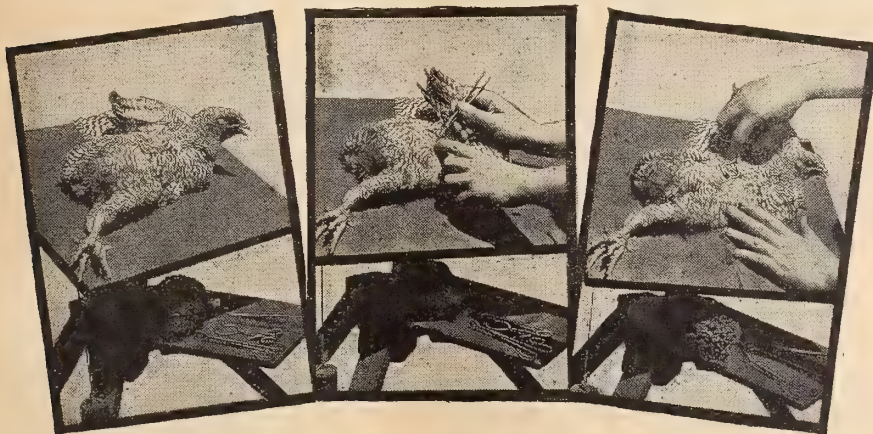

### The Operation of Caponizing.

The actual caponizing, as stated above, is merely a short and very simple surgical operation. However, space forbids here a detailed and minute description, or anything more than a general set of directions. The beginner should secure his method of procedure from one of the many books written on the subject, from issues of poultry journals that have treated the subject, from State or Government bulletins, or from the handbooks distributed by makers of caponizing instruments. Among these latter, that published by the Geo. Pilling Company, of Philadelphia, perhaps the best known makers of poultry and cattle in-

struments for caponizing. Only the very best should be used—best in material and workmanship, as well as convenience and efficiency. The caponizer should begin with one of the sets of capon tools sold by dealers, rather than attempt to pick his own tools. After he has attained expertness, he can pick out special instruments that he is able to use with better success than others—but at first he can do no better than get a complete set of capon tools.

Among the many sets of such instruments, those manufactured by the Geo. Pilling & Son Company, of Philadelphia, possess decided advantages in the way of finest tested material and adaptability for their particular uses that has come from long experience. The Pilling company has been making caponizing tools for over fifty years, and their instruments are in use everywhere, by the best caponizers. They are heavily nickeled, a fact that renders them absolutely sanitary and safe. They embody every improvement invented in this country and abroad, and they are reliable and satisfactory in every respect. The Pilling company issues an illustrated catalog of capon tools that every poultryman should send for, if for nothing else than its information. A copy will be sent free on request.

After being caponized, the former

sults, provided the operation is conducted on a sunny day and with ordinary precautions.

The locality of the plant should not affect a capon business. Just as good capons are produced in the West, the North or the South as can be made in New Jersey or in the vicinity of Philadelphia. These regions have secured their repute simply because they were the pioneers in capon culture. The name, "Philadelphia Capon," does not imply that the bird was raised near Philadelphia, but that it is a certain type of capon—a type that can be produced equally as well in Virginia as in Ohio.

struments in the country, is excellent. This book, "The Complete Guide for Caponizing," takes up the subject in detail, and can be secured free of charge from the Pilling people.

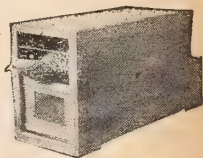

In caponizing, care should be exercised to keep hands and instruments clean, and a certain dexterity, easily acquired by experience, is needed. However, it is wonderful to note how quickly the birds recover and how much rough and inexperienced handling they can stand. It is very essential, however, that good instruments be used.

Too much importance cannot be attached to the selection of the right in-

HUGH A. ROSE

FONTHILL, ONTARIO

F. CONWAY, MANAGER

cockerel loses all of his objectionable traits. He no longer chases about the yard, spoiling for a fight, running off his flesh, eating his head off, waking the neighborhood at sunrise and otherwise causing trouble. He becomes quiet, gentle and content, seeking the company of little chicks and never molesting his fellows. The capon begins at once to put on flesh and to increase in stature, growing much more rapidly than his brothers

who have not been caponized.

Although advisable to make some arrangements for housing and keeping capons together, especially if there are many of them on the place, it is not essential to go to any expense for special equipment or feeding. Plenty of water and soft feed should be available directly after the operation, which, by the way, seems to produce no bad effect on appetite or health, even for a short time.

Also it should be remembered that the capon is to be fattened for market, and fattening feed should therefore be fed. The capon is very hardy and healthy and requires no special attention.

The capon is usually kept for a year before killing. Some keep them longer, on account of market conditions, but this is immaterial. One year, however, is the minimum age for capons. By this time they have become large, fat and beautiful birds—well worth the top prices they command.

#### Killing and Dressing Capons.

There is a great difference between the dressing of capons and ordinary fowls. When the bird is ready for market, it should be kept without food for twenty-four hours before killing, in order to entirely empty the crop. A clean, light, cool place is selected for killing, and two reavy nails are driven about a foot apart in an overhead beam. Two nooses of strong string hang from these, and a leg of the capon is secured in each. Catch the head of the bird, and with a French poultry killing knife cut the vein at the back of the throat through the mouth. Never cut this vein from the outside. Immediately it is cut, run the point of the knife through the roof of the mouth clear through the brain. This causes instant death and also makes the feathers come off easily. Begin plucking at once.

A sharp hook, with a weight of about two pounds attached, should be fastened in the lower bill after killing and renders plucking easier. Capons are always dressed with the head on, as this is their distinguishing mark. Feathers are left on the wing up to the second joint, also the head and hackle feathers, the tail, those on the leg half way up to the drumstick and the long feathers on the hip close to the tail. Take care not to tear the bird, wash the head and mouth in cold water, removing all blood, and then place in the cleaning box.

Cut carefully around the vent and remove the intestines. The fat with which they are covered should be pushed back and slightly turned outward, and after hardening will give a very rich appearance. Let the birds hang in a clean, cool place until thoroughly cold and then pack for shipment.

#### Points to Remember.

There is less competition in this than in any other field of poultry raising. Every season the demand for capons is greater than the supply.

What kind of bird makes the best capon? Any kind! Even the dung hill fowl is twice as profitable if caponized. Plymouth Rocks and Langshans, however, on account of their size, make the largest and usually best flavored capons.

Be SURE to have good instruments. Don't torture fowls with bad ones. Don't risk using imperfect tools. For first class results, first class means must be used.

Remember, capons range in price from 25 to 35 cents until February, when they advance steadily until July. Capons weighing 9 and 10 pounds sell around 35 cents per pound.

Start caponizing NOW! Don't mind killing a few cockerels to become expert—they are just as good for eating as if killed in the regular way. Get a Pilling Set and become a proficient caponizer. Write the Geo. Pilling & Son Company, Philadelphia, Pa., for their booklet and catalog, and investigate this great poultry opportunity.

## EGGS AND CHICKS

### From our Vigorous, Free Range, Bred-to-Lay S. C. White Leghorns

Are the kind to start with. Eggs, \$1 per 15; \$5 per 100; \$45 per 1000. Chicks—big, vigorous, healthy fellows at 10c each. Illustrated catalogue free.

## Origin and Characteristics of Indian Runner Ducks

By LOUIS A. STAHMER

No breed of ducks has ever received such an enthusiastic welcome by Farmers and Poultry breeders in response to the extensive publicity, which they have received, as the Indian Runner. Regarding their origin a number of authorities differ, but that they were originally introduced into England about fifty years ago is generally accepted as true. According to Mr. M. J. Donald of Wigton, an authority on the subject, they were first brought to White Haven, England, from India by a sea captain and presented by him to some of his friends living in Cumberland, and for this reason the name of Cumberland Ducks is still being used to designate a certain variety of this breed. Although some fanciers claim that the original color of these birds

was penciled there is a difference of opinion regarding this matter in the United States, and when the Standard was made by the American Poultry Association, through the influence of many prominent breeders in this country, the English color Standard was changed and instead of making the penciled variety the accepted Standard color, the description of fawn and white was adopted instead. Although penciling is not classed as a disqualification, birds of this color stand very little show in competition with the fawn and white variety. In some shows, however, two separate classes are made, and at New York at one time two good size exhibits were shown. The shape of the Indian Runner Ducks is what distinguishes them from other members of the duck family, and on account of their upright position compelling them to take shorter and faster steps they were named Runner Ducks, and from the fact that they were originally imported from India the name of Indian Runner Ducks seems to be appropriate. The peculiar shape of the head, and the unusual length of the bill are other distinguishing characteristics and the dewlap found in the heavier varieties is missing entirely. Big claims are made for them from the utility standpoint, and one of the greatest and in fact the main asset of these ducks is their enormous egg laying capacity on the strength of

which they have been named the "Leghorn" of the duck variety. A 125 egg average for a whole flock is nothing extraordinary and 200 eggs per year records are not uncommon. The ducks are not very large and a fully matured specimen will not weigh much over five pounds. Their flesh is of exceptional quality not being near as greasy as that of the Pekin or Rouen duck. For the size of the bird, in comparison with the different breeds of poultry of the same weight, the Indian Runner Duck lays very large eggs. The eggs averaging about six to the pound are quite delicate in flavor and much in demand. Indian Runner Ducks are very easy feeders, they are the greatest foragers of any ducks, and if left to themselves will pick up

three fourths of their living if there is a possible chance. They are very poor sitters and it is best to have the eggs hatched by hens or in incubators. They require absolutely no water to swim in, as is generally supposed by many people, and for this reason are an ideal bird for the city or the suburban poultryman. What we have said about the fawn and white runner Ducks applies also to the pure white variety. Until about four years ago there were very few of this kind in America, but today they are giving the fawn and white variety a big run for popularity.

Undoubtedly the largest flock of

this variety is owned by Mrs. U. R. Fishel, Hope, Ind., wife of the well known White Rock breeder. Mrs. Fishel informs me that the demand far exceeds the supply. On my last visit to their place I saw close to 2,000 of extra fine specimens showing very good type. Indian Runner Ducks require very little shelter no nests are needed, and as they will persist in laying on the ground, for that reason they should be kept penned in until about 10 o'clock in the morning, as after that hour very few eggs are laid. Indian Runner Ducks should lay pure white eggs. Green eggs show the presence of an outcross either for size or color.

Increased production has made keen competition at the shows, resulting in a better understanding of type and color.

A Flock of Young White Runner Ducks

HIGH GRADE FIRST PRIZE WINNERS AT PITTSBURGH, FEBRUARY, 1913.

WHITE PLYMOUTH ROCKS THAT SHOW ALL THE DESIRABLE FEATURES OF THE BREED.

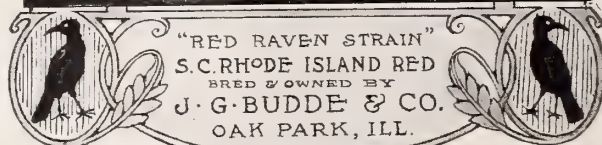

#### INDIAN RUNNER DUCKS.

They are great layers of large eggs and will equal in production any of the modern breeds of poultry. Averages of close to 200 eggs per year are not uncommon. Their flesh is of fine texture and quality and not as greasy as that of the Pekin or Rouen Duck. They are very active in their habits, great foragers and will pick up three-quarters of their living if there is a chance.

# American Poultry Journal Experimental Station

Dr. Prince T. Woods, Director

## Some Changes.

Hereafter the American Poultry Journal's experimental work and investigations in poultry husbandry will be conducted on the Anchorage Farm, the home of the managing editor, at Silver Lake, Plymouth County, Mass., and on the home farm of our associate editor, H. H. Stoddard, at Riviera, Texas.

The Anchorage Farm now occupies about 29 acres of land on the shore of Forge Pond, near Silver Lake, and is well equipped for experimental work. Owing to some unexpected changes, which have occurred since the middle of February and which interrupted all poultry experiments and stopped all poultry operations, the farm will be restocked on a smaller scale and under the sole proprietorship of Dr. Woods. To perfect plans for this reorganization and reconstruction will take some time and it is intended to take ample time for the work and keep it under exclusively one-man control. We are confident that the results will prove more satisfactory to Dr. Woods and to our readers.

The Wozelma Farms Producing Company, mentioned in the January American Poultry Journal, is no longer associated in any way with our experiment station, and Dr. Woods no longer has any connection whatever with that corporation. At the annual stockholders' meeting the Wozelma company re-elected John E. Zeller treasurer, who is principal owner of the company. H. LeBaron Sampson, Esq., of Boston, was made clerk of corporation, and the following directors were elected: John E. Zeller, East Orange, N. J.; H. V. W. Card, New York City, and Ralph L. Mason, Wellesley, Mass. We understand that the plant, including all breeding fowls, is to be moved to New Jersey within a short auto drive of Mr. Zeller's parental home. The company will not be in any way associated with our experimental work. Any further information which may come to us concerning it will receive due consideration as news. The company still retains a considerable area of woodland on the shore of Silver Lake.

Experimental work on A. P. J. Experiment Station since the middle of February has been so interrupted that we have little to report. Practically all of the work with fowl which had not been concluded by that date was so interfered with that it will have to be started again with new flocks, owing to the changes mentioned above. We believe that eventually these changes will work out to the best interests of this magazine and our readers.

## Tested and Found Good.

Following are listed a few things that are due for report and which have been tested at American Poultry Journal Experiment Station:

## Hatching Egg Carriers.

**Egg Bale.** The Egg Baler Co., Kansas City, Mo. A specially prepared package or bale of excelsior for carrying eggs for hatching, either by parcels post or by express. This is an excellent and economical carrier for hatching eggs and it can be depended upon to carry valuable eggs safely. No other packing required.

**H. & D. Egg Box.** The Hinde & Dauch Paper Co., Sandusky, O. A good, strong, light-weight shipping package, made of celliform jute board. Stands shipment well. Some packing required around eggs.

**Safe-Egg-Pak.** Star Egg Carrier & Tray Mfg. Co., Rochester, N. Y. A good parcels post and express carrier for hatching eggs. Case is of wood. Fillers are special design and protect eggs without extra packing.

## Equipment.

**Poultry Wire.** Silver Finish Brand. Clinton Wire Cloth Co., Clinton, Mass. Styles tested: fly screen mesh, 1/4-inch mesh for house fronts, 1-inch hexagon mesh, 2-inch hexagon mesh. Very satisfactory and durable wire goods.

**Galvanized Iron Nests.** H. L. McIntire, Rockwood Farm, Burlington, Kan. Practical, serviceable nests made of galvanized iron and supplied in single nests, and banks of three or six nests.

**Twelve-Bird Laying House.** E. C.

**Young Box Co.,** Randolph, Mass. A convenient, low-priced, well-made combination colony house. Made with and without patent back allowing roost to be exposed to weather by day. Convenient for small flocks anywhere and especially so for the back-lotter.

**"Planet, Jr."** No. 25, Seeder and Double Wheel Hoe. S. L. Allen & Co., Philadelphia, Pa. Very convenient and efficient implement for use in the garden. A great labor saver.

## Supplies.

**Beef Scrap.** The Geo. E. Marsh Co., Lynn, Mass. A good, wholesome feeding scrap, which runs uniform in quality.

**"Sterlingworth Charcoal."** An excellent quality poultry-feeding charcoal. Our supply obtained through Jos. Breck & Sons, Boston, Mass. Can be had of supply dealers generally.

**Sifted Oyster Shells.** Eastern Grain Co., Bridgewater, Mass. A good quality crushed oyster shell for poultry feeding, cleaned and graded in three sizes.

**Green's Poultry Account Book.** Horton B. Green, Dixon, Ill. A convenient and easily kept account book for poultry keepers.

Numerous other things have been received, but there has not been opportunity to test them. No report is made unless test shows sufficient merit to warrant it.

## J. W. PARKS' STRAIN BRED-TO-LAY

### BARRED PLYMOUTH ROCKS

My hen "Liberty Bell" laid 266 eggs in 1912, winning championship cup at Illinois State Show, Springfield, January, 1913. Circular free.

Eggs for Hatching and Day-Old Chicks

O. F. Mittendorff : : Lincoln, Illinois

# TABASCO REDS

## Champion S. C. Rhode Island Reds

Winners—1913—of best display at Madison Square Garden, with First and Fifth Cockerels, First and Second Pens, etc. Thirty Points to the next competitor's nineteen.

Winners—1913—First Cockerel and Second Pen, with Specials, at Boston's Great Show. First Cockerel at both New York and Boston in one season is an unequalled record to date.

Winners—1912—of the \$50 Cup for the best Cock, Cockerel, Hen, Pullet and Pen, at the annual meeting of the R. I. Red Club of America, at Boston.

Winners—1911—of First and Third Cockerels at Madison Square Garden, and First and Third Cockerels at Boston.

Winners of seven of the sixteen ribbons in the Cockerel Classes at Madison Square Garden the last three years.

Winners of First Pen at Boston five of the last six years.  
For red-hot Tabasco Reds address,

Old Acres :- Foxboro, Massachusetts

### May to Mid-June.

For best results get small chicks out on the ground early. Provide a green run if possible and increase size of run gradually as they become used to it. Always train brooder chicks to use the outdoor run and see that they learn to go into the brooder to warm up. Prevent huddling out of doors in sunny spots.

\* \* \*

Look out for hawks, foxes, cats and other marauders at this season. You will need to wage war all the time against furred and feathered chicken thieves. Foxes and hawks are particularly plenty and bold in our section this season. We had a big red-tailed hawk make way with an eight-pound hen early in April and it swooped down into the run near the house for its victim.

\* \* \*

When through using eggs for hatching take the males away from the hens. You will have better warm-weather market eggs and the hens will be benefited. Any males that you do not intend to carry over another winter, or hold for sale as breeders, had better be sold now for market.

\* \* \*

Hens that have laid well all winter and show signs of knocking off work for the warm season can often be induced to give a fine summer egg yield by giving them a good, well-shaded woodland or orchard range, with no shelter but the trees. Provide plenty of roofed nests in sheltered spots.

\* \* \*

When thinning out the garden do not forget that the fresh young greens will be relished by the fowls and chicks. Feed an abundance of fresh

green food. Give them all that they will eat. Plant a patch of rape to supply fresh greens for growing chicks later in the season.

\* \* \*

Apple blossom time is a fine season for young chicks in the orchard. Be careful though not to mix up the chickens with the free use of poisonous spray mixtures. Green stuff drenched with lead and arsenic spray mixtures will kill chicks.

\* \* \*

Bear in mind that while sunshine and fresh air are two of nature's best gifts, protection should be provided against high winds and also some shade is necessary when the sunshine becomes too hot for comfort.

\* \* \*

Provide plenty of cool drinking water. Keep it in a shady spot, where it will stay cool. Keep the drinking vessels reasonably clean.

\* \* \*

Don't overcrowd chicken coops at any time, but be particularly careful at closing up time to see that coops and boxes are not crowded and that there is ample ventilation. We had two young men on the place last season that thought more of their own comfort than they did of the flocks, and one warm night they closed tightly a box coop that contained about three times as many 3 and 4-pound chicks as it could be expected to hold. Result that they held an inquest the next morning on a box full of dead chickens. They were "sorry," but that did not pay for the chicks and a little care at closing up time would have saved trouble and prevented the loss.

\* \* \*

Because you happen to have been

successful with one brood or have gone through one season with fairly good results and without many mishaps, don't get the notion into your head that you know all there is to know about poultry. There are a good many breeders, who have been at it for a score of years, who will tell you that they know less now than they thought they did at the close of their first year, and they are still learning. Don't be ashamed of what you don't know. Don't let your head swell too big with what you think you know. You may have to forget some of the things you feel so cocksure of now. It is a good deal better not to know so much, than it is to know so much that isn't so.

\* \* \*

One of the hardest things for some folks (especially some young folks who are in a rush to get through work to go pleasuring), is to clean up after a job when it is finished or before starting a new one. When through with sitting nests, clean them up and put them away. When through with incubators, clean them up and leave in good order; if hot water machines, drain off all water. Do the same with brooders, with tools and with everything you use. It takes a little time, but it saves both time and money in the end.

\* \* \*

Break up the broodies that you do not intend to set. A swinging coop with a slat bottom is a most effective breaker-up. If the hen is put into the breaker-up the first night she is found on the nest and allowed to stay confined three days without food, but with water to drink, she will usually be ready to go back to the flock and in three or four days more may be laying again.

## BABY CHICKS—U. R. Fishel's White Plymouth Rocks the Best in the World

## WHITE AND PARTRIDGE PLYMOUTH ROCKS

Chicago, Milwaukee, Racine 1913 Winners.

We have mated 12 pens of White Rocks and 6 pens of Partridge Rocks for the egg trade. Every pen is carefully selected and will produce birds of type and quality that will satisfy the most fastidious breeder. Remember that the prizes our birds won were won in the strongest competition at Chicago, against such breeders as Owen Farms and Guy Daily. I still have several splendid bargains in Partridge Rocks and Golden Laced Wyandotte Cockerels. Send 3 red stamps for our handsome new catalog just off the press. It will convince you that we have the goods and sell them at living prices.

PETER OLLE -- R. F. D. 4, BOX 110 -- RACINE, WISCONSIN

## 20th Century Dual Purpose Fowl

MONMOUTH S. C. BUFF AND WHITE LEGHORNS. We have perfected in our strain the long sought for result, exhibition and utility combined. Champions of the South, practically sweeping the decks in both varieties at Atlanta, Ga., December, 1912, also winning 1st pen Madison Square, New York, 1912-13, for the 5th year in succession in Buff Leghorns our only entry, places the MONMOUTH STRAIN in a class by itself. Our Buffs and Whites are producing wonderful results on many egg farms the country over, and reports from Argentine Republic and other foreign countries, who breed the MONMOUTH STRAIN, are most flattering, which substantiates our claim that we have perfected in our strain the DUAL FOWL. Why hesitate and experiment when a tried and true article is within your reach? Join the ranks of Monmouth Customers and tread the path of success. Years of experience are back of our matings this season. They are not problematical but assured facts. Our past records speak emphatically for our ability in this line. Send for our beautiful 1913 Catalog and Mating List which gives full description and prices of our matings and stock. Always address,

MONMOUTH FARMS J. C. Punderford, Owner  
Thomas Lockwood, Supt. FRENEAU, MON. CO., N. J.

## QUESTIONS AND ANSWERS

Questions will be answered in this department only when full name and address is signed by the writer.

Conducted by

Prince T. Woods, M. D.

### If Your Questions Have Not Been Answered.

If your questions have not been answered in this department over your own initials or those of some other correspondent, or you have not received a reply by mail, we are sorry that you have been disappointed. We have done the best we could for our correspondents, but we have been more than ordinarily busy this season and have received several hundred more letters than one man could possibly handle if he gave his whole time to it, and we can only devote a very small portion of our time to correspondence and to this department. So far as possible the more urgent cases have been answered by mail. Those of general interest to all have been answered in these columns so far as space and time would permit. If your letter remains unanswered or was sifted out in the "culling" we hope you will understand and not feel too badly about it. Next time we hope you will have better luck.

### Good Grass for Chickens.

Q. What would be a good grass to sow for chickens?

Washington, R. I.

R. W. A.

A. Any good lawn mixture that makes a tough sod. Would prefer one containing some white clover, which grows fine and low and stays green in dry weather.

### Lettuce for Chickens.

Q. (1) Is lettuce good greens for chickens? If not what is the best? I am feeding lettuce only.

A. (1) Lettuce is good if fed when young and tender. Chopped dandelion leaves make fine greens for chicks early in the spring. Dwarf Essex Rape is a first class green food to grow for chickens and fowl of all ages. Sprouted oats are eagerly eaten by chicks and fowls and there are many other green foods containing living cells that are good to feed. Raw potatoes will be relished when other live vegetable foods are

scarce. An abundance of live vegetable matter (greens and raw vegetables) are necessary to balance the grain and meat feeding.

Q. (2) Which kind of beef scraps is the best?

San Gabriel, Cal.

W. S. T.

A. (2) We have no data concerning beef scraps available in your locality. Good beef scrap should not have an offensive foul odor and should not smell like guano when scalded. It ought to be a light coffee brown, may contain some coarse particles of meat and bone, but should average rather fine. It should be free from lumps and should not contain wool or bristles.

### Worms.

Q. Do chickens ever have worms? If so what are the symptoms? What is the cure? We have a number of chickens that are old enough to weigh 2 or 3 pounds, but do not grow and are skin and bones. They are fed well three times a day. Use cracked corn, wheat, oats and bran. Give either steamed or sprouted oats once a day. Chickens seem weak in their legs. They are always hungry and eat everything they can get.

Omaha, Neb.

M. H. F.

A. Both chicks and fowls may have

parasitic intestinal worms. The symptoms vary. You may have abnormal appetite or loss of appetite. There may be leg weakness, diarrhoea, and partial paralysis of neck (limberneck). There may be cases where the chicks have fits (not always due to worms but may be in some cases). Usually there is loss of flesh, emaciation, stunting of growth. Diagnosis can be positive only when worms or parts of these parasites are found in the droppings. Remedy: The droppings must be thoroughly drenched with a good disinfectant and be removed often to be either burned or buried deeply. Crushed garlic bulb fed freely in the soft food is often effective. In some cases it may be necessary to starve the birds for 24 hours and then give good dose of turpentine and sweet oil. Mix one teaspoonful of spirits of turpentine with two tablespoonfuls of sweet oil. The whole may be given at one dose to adult fowls, give chickens considerably less in proportion. If this does not result in prompt improvement follow in a few hours with a dose of epsom salts. The dose of epsom salts for an adult fowl is  $\frac{1}{4}$  teaspoonful and it should be given well diluted with water. 8 weeks old chicks should not be given more than one-quarter of that dose. The turpentine and sweet oil mixture is best given with a syringe and injected down

### DIRK'S RED MITE KILLER

One application kills all mites and prevents their reappearance during the season. Keeps fowls free from body lice. Makes scaly legs bright and clean. Keeps lard, pastry and sweets free from ants. Write today for special trial price.

**M. E. DIRK, Box 102, North Baltimore, Ohio**  
Marshall & Marshall, Niagara Falls, Ont., Distributors for Canada.

## OCULUM

### The GREATEST EGG PRODUCER KNOWN

—is rapidly covering the country through many leading distributors. Experts and experiment stations are recommending it. Why? What is good enough for them, is none too good for you. Worst cases of cholera, roup, white diarrhoea and black-head readily yield to OCULUM. Here is what I. W. Scott & Co., Pittsburg, say:

"Yours received acknowledging our order for fifty gross (\$24,000.00 order) OCULUM. We have been handling OCULUM for more than a year, and although we have always put it out on your "money-refunded-if-not-satisfied plan," we have not been called upon to refund for a single bottle."

Will you still use the AXE? At your dealer—or send direct. Two extra syringes for dealer's name.

H. I. CO., Box B, Salem Virginia.

Inclosed find \$1.00, or 50c. Please rush me bottle OCULUM. If I am not satisfied after 30 days' use, my money to be refunded. (Write plain.)

the gullet directly into the crop. Usually a little garlic bulb fed in soft food is all that is needed for smaller chicks.

#### Cost of Building Woods' Open-Front House.

Q. We have one of Dr. P. T. Woods' books, "Open-Air Poultry Houses for All Climates," and contemplate erecting a 20x20 ft. house on his plan. Have had several bids taken, but the price asked to put up this building is way beyond our expectation. Kindly let us know what this poultry house has been built for before, in order that we may be guided by cost paid by others.

St. Louis, Mo.

L. H.

A. During the season of 1912 we built eight of these Woods' houses, each 20x20 ft. The houses were well framed and set on posts. The sills were of 4x6 spruce, studs and plates of 2x3 spruce, rafters 2x4 spruce. Covering-in boards were Michigan poplar. Second clear shingles were used for sides and best clear shingles for the roofs. The doors were made of good clear matched white pine. The nails and hardware were best quality for the purpose. Good new windows were used and were bolted on. One-quarter in. mesh galvanized netting was used for the fronts. The cost of these houses, including labor at \$2 per day for three men, and also including filling with gravel from our own pit near at hand, was \$115 per house. It is not necessary to hire skilled carpenters at \$4.50 per day and upwards to build poultry houses. You should, however, be able to find a con-

tractor who will put up these houses in lots of eight or ten buildings at a cost not to exceed \$100 per house for material and labor. A cement floor or filling in with gravel to tops of sills will add somewhat to the cost.

#### Charcoal.

Q. Have never used any charcoal for my fowls, but am thinking of getting some for them. Have no idea how much 100 birds (Wyandottes) might be expected to eat. They have an acre range in good weather.

Menan, Idaho.

J. H. Y.

A. Amount eaten varies a good deal. If not used to it they may eat a considerable quantity after they first take to it. Be sure to get a good grade of charcoal prepared especially for poultry feeding. We used half a ton for one thousand hens for one year, though they were without any for a couple of months. One hundred pounds would probably carry your fowls through the year all right. It is sold usually in 50-pound sacks and in barrels. If you cannot order 500 pounds at one time it will probably be better economy to have a barrel sent by freight.

#### What's the Answer?

Q. (1) I had six White Leghorn hens and three Buff Rock hens with a White Leghorn cock. The Buffs laid brown eggs and the Whites laid large, pure white eggs, no similarity between the two kinds of eggs. Is it possible

that chicks hatched from the Leghorn hens' eggs could be marked by simply having the Buff hens run with the Leghorns?

A. (1) We do not believe such contamination or "mental influence" at all probable.

Q. (2) I hatched chicks from the Leghorn eggs and had no sign of a mixture, but I sold some of the Leghorn eggs to a party and when the eggs were hatched there was a pure buff chick in the brood. The party claimed it was hatched from one of my Leghorn eggs. I do not believe it was, but think one of her Buff hens laid the egg in the sitter's nest without her knowledge. The chick when two months old looked like a pure Buff Rock.

Grand Rapids, Mich.

F.

A. (2) We don't believe the Buff chick came out of one of your Leghorn eggs. You may have included a bleached out Rock egg in the sitting. Her brood hen may have laid an egg in the nest from which the Buff chick was hatched, or, as you suggest, one of her Buff hens may have laid in the sitter's nest.

#### Scaly Leg.

Q. The scales come off the legs and feet of some of my hens, leaving them bare and rough. What is cause and the remedy? I have been told it is due to lice. If so, what kind of lice?

Dayton, O.

S. K. S.

A. Trouble is scaly leg, caused by a

# FRENCH'S POULTRY MUSTARD

## "Beware of Imitations"

If you will send us your name and address, we will send free of charge a copy of the booklet edited by Mr. Ralph Allen of Herts, England, containing a full description of the experiments conducted for over two years by Mr. Allen, in the feeding of mustard to poultry for increased egg production, together with testimonials and experiences of many of the largest and most prominent American fanciers. French's Poultry Mustard is an improvement upon the mustard that was used in England during these experiments. If you are not using it already, you should begin at once.

parasitic scab mite (the *Sarcoptes mutans*). Apply compound sulphur ointment to the affected parts and rub it in well. Give two or three applications a day or two apart and then soak the legs and feet in warm soapsuds. If they do not clean up well, repeat the treatment.

#### Feeding for Rapid Growth.

Q. Will you kindly tell me what combination of hard grains and mill feeds are necessary to promote rapid growth of chicks from three weeks old to maturity? I want a good mash and the required hard grains to go with it. A ration that will make bone and muscle rapidly and not fat and that will insure large massive frames and good sound muscle at maturity. I should mention that the chicks in this case never have free range from shell to maturity and are always kept in limited quarters. Thus they do not have the opportunity to gather bugs and worms that they would if allowed to roam. I want to know how to supply

the equivalent in their ration. I have tried several commercial foods and also several formulas given in papers, but all of them produce too much fat and not enough bone and muscle. I understand that growing chicks must have sufficient green food, together with shade in summer and plenty of exercise at all times. All of these features I have arranged for nicely and it is the addition of a good growing mash and proper hard grains that is necessary to produce the desired result.

Howard Park, Md.

W. J. G.

A. You can't grow good sound healthy youngsters without some fat, in fact a good deal of fat is necessary to arrive at the very results you wish to attain. We doubt very much if you can get the massive frames and good sound muscle you are after unless you supply a reasonably liberal amount of good green range. Arranged for exercise won't take the place of an open run that is well divided between grove and grassland. You will need to feed an abundance of fresh greens and

freshly chopped Dwarf Essex Rape is one of the best. Freshly cracked corn will be one of the most essential hard grains, followed later by whole corn. They will need an abundant supply of good beef scrap. For hard grains other than corn you will want plenty of good heavy oats and some good hard wheat. Oats should be fed plain and sprouted. For mash would suggest the following grains ground together into a rather fine meal: Whole corn, 50 pounds; whole hard wheat, 20 pounds; heavy clipped white oats, 15 pounds; best heavy barley, 15 pounds. Keep this meal before them all the time in a hopper. They will eat it eagerly hulls and all. Give, as usual, supply of clean water, charcoal, crushed shell, grit and granulated bone. If they get enough outdoor exercise and sufficient greens they won't take on excess of fat. If rather closely confined and not sufficiently exercised you will find that they will fatten. We don't believe that anything can take the place of a combination of green and woodland

## E. B. Thompson's Imperial Ringlet Barred Plymouth Rocks

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

Mr. E. B. Thompson:

Dear Sir:—From the Imperial "Ringlet" eggs ordered from you last Spring I have 23 of the most healthy and well marked birds, both in shape and barring that I ever had the pleasure to lay my eyes upon. Out of the 23 birds I have exhibited 13 with the following results:

At our Williamsport show in competition with 240 Barred Rocks, I won first cockerel on two entries. At Hughesville, Pa., showing 13 birds, I won 1st, 2d and 4th on cockerels, three entries; 1st, 2d and 3d on pullets, three entries; 1st pullet bred cockerel, one entry; 1st, 2d, 3d, 4th and 5th on cockerel bred pullets, six entries.

I have sold three of the cockerels at \$25 each and have refused \$150 spot cash for my first prize Williamsport cockerel, and \$50 for the other cockerel; I also refused a very flattering offer at Hughesville for my complete line of pullets. I must acknowledge the Imperial "Ringlet" strain is positively the best I can get. You may depend on me for a very substantial order very soon.

Yours truly,

C. E. Liebensberger.

Elegant cocks, cockerels, hens and pullets of the richest New York first prize champion blood for sale and mated to produce prize winners. I will take a warm personal interest in your success.

My "Ringlets" are wonderful layers of fine eggs as well as win the blue.

Richly illustrated 70-page catalogue upon request. It is full of illustrations of New York winners from life.

EGGS from the finest exhibition matings in all the world, \$10 per setting; four settings for \$35. One hundred eggs, \$60.

**E. B. Thompson** Lock Box 510, Amenia, New York

### The Finest Birds in All America Are Here on My Farm Today THOUSANDS IN NUMBER

The reason for my unprecedented winning at the last 1913 Madison Square Garden, New York, Show is very evident on my farm on all sides. See ad at top of back cover page for this wonderful record.

Emerson said:—"If a man can write a better book or make a better mouse trap than his neighbor, though he build his house in the woods the world will make a beaten path to his door." The path to my farm is well trodden by prominent breeders.

I invite you to come and see my Imperial "Ringlets" at home—on their native ground. A visit here will be a revelation in the science of Barred Rock breeding; you will see buildings full of the rarest of exhibition birds, and breeders full of New York First Prize blood, grand in size and shape, great length and breadth of backs and bodies, with tails carried right; splendid heads and clear blue color, with narrow, sharp, cleancut vivid barring to the skin. You will see my wonderful matings that will produce the champion first prize winners for next winters shows. I now have on my farm five times as many first prize Madison Square Garden males as any breeder in America.

### I Will Sell You Eggs from the Finest Matings in All the World

There Is No Strain or Line That Can Win in competition with My Best Imperial "Ringlets"

Williamsport, Pa., Dec. 31, 1912.

range for growing chicks where massive frame and well muscled bodies are the object.

#### Rose and Single Comb Reds as Layers.

Q. Is there any particular difference between Rose Comb and Single Comb Rhode Island Reds as layers?

Tippecanoe, Ind.

Subscriber.

A. No. Both are fine layers and fine sitters.

#### Age of Cockerel and Pullet.

Q. (1) How old must a cockerel be to be a rooster or cock? How old must a pullet be to be a hen?

A. A cockerel is a male fowl less than one year old. A cock is a male fowl more than one year old. A pullet is a female fowl less than a year old. A hen is a female fowl more than

a year old. These are the "official" definitions. It is, however, common practice on the part of poultrymen to call a male a cockerel through the first breeding season after he is grown and then to call him a yearling until he finishes another season, when as a matter of fact he may be several months over a year old by the time his first season closes as a breeder. With pullets they are often called pullets or pullet-hens until the close of their first year of laying, though they may be eighteen months or more old before they complete their first laying year; then they are classed as yearlings. The official definitions apply in case of show specimens on exhibition.

Q. (2) What are the standard weights of Orpingtons?

Fort Lee, N. J.

J. H. B.

A. (2) Cock, 10 pounds; hen, 8 pounds; cockerel, 8½ pounds; pullet, 7 pounds.

#### Discharge from Nostrils.

Q. There is something wrong with my fowls, the nostrils become pasted over with a darkish discharge, one eye will swell up, breathing is difficult and there is rattling in the throat. The combs are red and they continue to lay. Would like to know what to do. Is there a reliable book on diseases of fowls?

Shickley, Neb.

C. M. H.

A. Fowls have ropy colds. Get some good cresol disinfectant like creolin, kreso, napereol or model disinfectant. Add one tablespoonful of this to a gallon of soft water. Use this mixture as a dip for the fowls' heads.

# HATCHING EGGS

From Trapnested Stock with Record of 200 Eggs or Better, 30c Each

From Trapnested Stock with Record of 144 to 199 Eggs, 20c Each

From the Same Blood Lines as Trapnested Stock, 10c Each

If you desire the best stock for egg production, it will be entirely to your interest to rely solely upon the strain, and not the breed. There are good layers and poor layers in every breed, and up to the present time the poor layers are in the majority. Our specialty is "Egg Production," and it is for this reason only that we considered "Lady Show You" worth the price we paid for her, which was \$800. We purchased other birds as well, but at no time did we purchase a bird whose best qualities were not egg production.

There are many breeders of the varieties we have, making extravagant claims concerning the egg producing qualities of their stock. There are practically none of these breeders breeding for egg production. There is but one way to breed for egg production, and that is by the continual use of the trapnest. We are now trapnesting over eight hundred birds. The only certain income that can be derived from the poultry business is eggs. You should therefore make this your objective point. There are ninety million people in this country to sell eggs to, in comparison to a mere handful who desire feathers.

We are prepared to ship your order of eggs immediately. Write for 48-page instructive catalog.

Midlothian Farms & Hatchery John G. Poorman Manager R. 5, Tinley Park, Illinois

Hold their mouths open and souse their heads well in the mixture. House in open-front houses. Repeat treatment if necessary. Feed liberally. "Poultry Diseases and Their Treatment," published by Maine Agricultural Experiment Station at 25 cents a copy is an excellent book. We can supply you with Dr. Salmon's "Diseases of Poultry," at 50 cents a copy postpaid from Book Department, American Poultry Journal, 542 South Dearborn street, Chicago, Ill.

#### Beef Scraps and Ground Bone.

Q. (1) Which do you prefer, beef scraps or ground bone for growing chicks for layers?

A. (1) Usually the beef scrap contains all the ground bone required. When it doesn't we use a good poultry-

feeding, kiln-dried, ground bone.

Q. (2) How old should a chick be to be fed ground bone or beef scrap?

Pittsburgh, Pa.

G. S. Y.

A. (2) If we are entirely certain that the beef scrap is all right we feed it from the start. Some growers do not use scrap until the chicks are ten days to two weeks old.

#### Swelling Between Toes.

Q. I keep Barred Rocks and Black Minorcas. The latter are troubled with corns and some hens are lame with swellings between the toes. The Rocks are not affected. What is the cause of these big corns?

Andover, Conn.

G. E. W.

A. From your description believe your fowls have something more serious than corns. Where practically all of

them have "corns" and foot abscesses believe that there is constitutional disease. Would get rid of that flock of Blacks and start with a new lot. Clean up and disinfect the old quarters before you put new birds in there. Don't use small perches and do not have them too high.

#### Dosing with Cantharis.

Q. A person who has made a business of poultry told me that when he wished to start his fowls laying he fed them a few doses of Cantharis with good effect. Now, I am a pharmaceutical chemist and understand the action of the drug from such standpoint, but wished to get your opinion as to advisability of feeding the drug before attempting same.

# BABY CHICKS

From Trapnested Stock with Records of 200 Eggs or Better, 50c Each

From Trapnested Stock with Records of 144 to 199 Eggs, 35c Each

From the Same Blood Lines as Trapnested Stock, 20c Each

What applies to hatching eggs; also applies to baby chicks. The baby chick season is now at its height; and we are making prompt shipments to our customers throughout the country. You will save time by ordering direct from this advertisement, either by letter or telegram. You may telegraph us your order, and remit by mail. We will book your order received by telegram, and be prepared to make shipment upon receipt of your letter.

If you are to build up a profitable poultry business, it will never be accomplished by purchasing baby chicks from stock promiscuously bred. We are shipping repeat orders to very many of our customers. Our chicks are strong and active, and are the kind that will grow and give satisfaction. For this our customers will vouch.

If you are in need of new blood, we can not only supply your requirements, but can give you the blood lines that will greatly improve the laying qualities of your flock. A successful start, with good layers, will always result profitably. We have made this start possible for you. Kindly write for our forty-eight-page catalogue which describes the most profitable egg producing farm in the world. Please mention American Poultry Journal.

Midlothian Farms & Hatchery

John G. Poorman  
Manager

R. 5, Tinley Park, Illinois

A. We have, from time to time, noted the exploitation of Cantharis for this purpose. We do not consider that it has any practical value and believe that dosing fowls with Spanish flies is more likely to do harm than good.

#### Paralysis of Legs in Young Chicks.

Q. Will you kindly advise me what are the causes leading to apparent paralysis of the legs in young chickens, between birth and to age of three weeks?

Chicago, Ill.

N. H. M.

A. Autointoxication from putrefaction of intestinal contents or from poisoning resulting from bacterial infection. Indigestion. Improper brooding. Too heavy graining without sufficient greens. Too close confinement in ill ventilated and overheated quarters without sufficient opportunity to have outdoor exercise on open ground. Remedy, prevention and removal of cause.

#### Fish Scrap.

Q. Where can I buy fish scrap for poultry? I am located 75 miles south-east of Chicago. Do you advise use of fish scrap in preference to commercial

beef scraps?

La Porte, Ind.

E. H. M.

A. The makers of the only fish scrap we have tested are on the coast. Red Star Fish Scrap is made by the International Glue Company, Boston, Mass. The Western Tallow Co., San Francisco, Cal., make a fish meat meal, but we have not tried it. We use both fish scrap and beef scrap and have not tried substitution of the fish product for the other.

#### Wants a Breed Suited to Cape Cod Climate.

Q. I would like the name of a breed of fowl best suited to this climate (West Dennis, Barnstable County, Mass.). I want a fowl that will lay well, grow quickly, look well when dressed, lay brown eggs and I also want them heavy enough to keep in yards of not over five feet in height. I have White Leghorns now. They lay well, but the eggs are white and mine can fly for money. I have plenty of good land for them. I don't care for prize winners. I want hens for business. I don't like Rhode Island Reds. What can you recommend? Who has them?

West Dennis, Mass. C. W. Boynton.

A. Any American variety will do well in your location. Why not try Wyandottes, Plymouth Rocks, or R. I. Whites? See advertising columns for names of breeders. It ought to be easy to pick a fowl suited to your locality. Almost any brown egg fowl, bred right, would fill your requirements.

#### To Make Hens Broody.

Q. I have Rhode Islands Reds and I would like very much to know what to do to make hens get broody.

Des Moines, Ia.

G. J. M.

A. With Rhode Island Reds you ought not to have much trouble if they have been laying well all winter. Ours go broody often enough. Leave a few nest eggs in each nest and feed liberally allowing plenty of corn. We don't believe you will have a great deal of trouble getting enough broody Reds at this season.

#### Introducing a New Male.

Q. I have nine hens and one cock R. C. R. I. Reds and they have been running with a Single Comb cock. When the ten are put in a pen by themselves how long before eggs will be safe to use as all sired by the Rose Comb cock?

Whelen Springs, Ark.

O. P. I.

A. It all depends on how many hens had just started to lay their litter before you removed the S. C. male. Probably you will be safe enough in two weeks, but it is possible that you may get chicks sired by the S. C. cock within thirty days of time you banished him from the flock.

#### Rhode Island Whites.

Q. (1) What kind of fowl are the Rhode Island Whites and what breeds were crossed to produce them? Who was the originator?

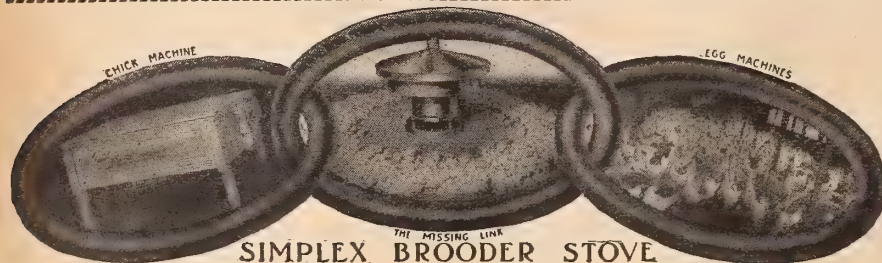

A. (1) J. Alonzo Jocoy, Towanda, Pa., is recognized as the originator of Rhode Island Whites. The first cross was White Wyandotte cockerel on Buff Cochins. The pullets from this cross were mated with a Rose Comb White Leghorn male. Out of 100 chicks from this mating there were ten pure white ones, two cockerels and eight pullets. These ten white birds from the second cross were the original Rhode Island Whites. The Whites are bred with both rose and single combs. They have very good shape that is between that of the R. I. Red and the Plymouth Rock. They are rated as excellent layers of good sized eggs. The weights given as standard by the Rhode Island White Club of America are: Cock, 8½ pounds; hen, 6½ pounds; cockerel, 7½ pounds; pullet, 5 pounds.

Q. (2) I had a hen that would not eat, had difficulty in walking with wings touching ground. Discharge from vent watery and some yellow in it. Thought she might be egg bound as she was badly swollen below the pelvic bones. Injected castor oil. She discharged a lot of watery fluid and the laying organs came out and also a piece of something like the white of a poached egg and about as large as my little finger, she died soon after passing this. Cut her open but could see nothing wrong.

Tamaqua, Pa.

C. F.

A. (2) Probably a case of broken egg and inflammation of oviduct. May have been due to injury or to some obstruction. It is seldom worth while to attempt treatment in such cases.

## White Diarrhoea No More a Scourge

If those back breaking, foul smelling, White Diarrhoea breeding hover brooders of yours are taking their usual heavy toll of the chicks you put into them you owe it to yourself to order one or more **Simplis Brooder Stoves** and not only save the chicks which are still living, but save yourself all that endless back-breaking work of caring for those little fifty-chick compartments.

If you have a building on your farm which is not less than 8x10 ft. or more than 15x30 it will be possible for you to install a **Simplex** and have it in operation within 24 hours after it arrives on your farm. No added expense to speak of. We furnish a stove complete, ready to set up and save your chicks. We will ship by ex-

press, prepaid, or make you express allowance if you live west of the Mississippi or south of the Mason-Dixon line, on day your order is received. **No Delay.** Send us the dimensions of your building with your first letter and we will tell you how to install the stove in it. \$29.50

pays for a stove complete with automatic oil regulator, oil pipes and connections and a 28-gallon galvanized oil tank.

#### Why Not Telegraph Your Order.

We will ship C.O.D. on the day your order is received. Full and complete instructions for operating go with each stove. **Just Nature and a Simplex are bound to make a profit for**

you. Don't hesitate to order. All stoves are sold on thirty days trial.

#### Why the Simplex Does Away With White Diarrhoea

With our system of ventilation, the air in the room is changed every fifteen minutes, and the carbon-dioxide which the chicks exhale in their breath is carried out of the room instantly. In the old fashioned brooding systems, which it is impossible to ventilate properly, the chicks are compelled to breath back into

their systems the poison in the shape of carbon-dioxide which nature has thrown off through their lungs and bowels. This carbon-dioxide is the only cause of bowel trouble and chicks which are kept in properly ventilated rooms are seldom afflicted with bowel trouble, and never when fed and housed correctly.

**"Successful Brooding"** is a book that really tells you something about raising percent fertile any month in the year and produce chicks that have a chance to live. Many brooding troubles begin in the egg. This valuable book sent for 50c. It will put you on the road to success. Send for our free catalogue. It tells all about White Diarrhoea. It also explains just why a **Simplex Saves 90 per cent of the labor, 75 per cent of the operating expense and brings to maturity from 20 to 50 per cent more and better chicks.** Write today for this catalogue. **IT'S FREE.**

**Simplex Brooder Stove Co., 137 Fourth Street, S. W., Grand Rapids, Michigan**

Chicago, Ill., April 9, 1913

Simplex Brooder Stove Co.,  
Grand Rapids, Michigan.

Gentlemen: Enclosed please find my check for \$29.50 in payment of brooder stove shipped me on the 7th. This is the second stove I have purchased from you this season, and of course the last one is purchased because the first one is doing the work. The stove works entirely satisfactory, and does all that you claimed it would do. **I believe you have solved the bothersome problems in brooding. THE STOVE HAS ENTIRELY ELIMINATED WHITE DIARRHOEA from which I suffered heavy losses, losing 50 percent of my hatch. The losses with the stove have been very small.**

Very truly yours,

J. C. Everett.

# Notes from the Southwest

Conducted by H. H. Stoddard, Riviera, Texas

## MECHANICAL ADVANTAGES.

**P**ROPHESIED A WHILE AGO that the horseless cultivator will be the thing in raising the great quantity of green stuff that will be fed to poultry by southwestern commercial poultry raisers.

In my teens and ever since I somehow had a fondness for prophesying. Twenty years before the machine for gathering and shredding cornstalks was invented I said it would have to come, because millions of acres of fodder going to waste begged and screamed for it.

The successful horseless cultivator overtook my prognostications not in twenty years, but in about twenty days after I mentioned the matter. There were two that turned up; considerably different in construction but both asking for no feed nor drink. Just a little oil. Not a tenth as much time for cleaning, oiling and keeping in order as the care of a team demands. See the advertisements in the recent farm papers. The earliest and imperfect horseless cultivators I do not count at all.

In a score of similar cases my pre-

dictions have been fulfilled. No great knack. Anybody can pick out something that is done by hand, or team, laboriously and to disadvantage, and then proclaim, "There ought to be a machine to do that." Reader, you try the expression in the hearing of your bright young machinist friend and see him

## Pick Up His Ears.

Later something may occur that may mean a productive power equal to that of many pairs of hands.

Prof. Summer over forty years ago, called this the "machine-ridden age." It is much more so now and will be still more so forty years hence. The machine at first operates against a small number of workers but later helps every worker, without a solitary exception, in every civilized country on the globe, for in this modern machine age human welfare knows no national or geographical boundaries.

Now, speaking of green stuff, whereas poultrymen used to regard it more as a relish than anything else, like grandfather's "raw onions cut up in vinegar," they now recognize greens as important food, real material to make eggs

of, just as a manger full of green alfalfa or freshly cut millet is material for butter fat if fed to your pet Jersey. Therefore, seeing that the fowl is more a grazing animal than a grain eater by nature, and turning to the

## Glorious Southwestland.

where instead of tropical suffocation there are refreshing sea breezes, the poultry keeper finds that succulent, juicy "living vegetable cells" can be grown in this climate to better advantage than anywhere else. But though some sorts can be sown broadcast, in other cases drills or hills are the proper caper and so either a horse cultivator or a horseless cultivator is needed and the last is bound to win. If not perfect as yet it will be made so. For one thing the operator should ride. In using either of the implements noticed above, he walks. Look here, Mr. Inventor and Manufacturer, there is not enough labor saving that way, and it won't prevail in the long run.

Another thing is needed and it's coming. A horseless and muleless seeder, that will open a furrow and drop in pulverized fertilizer and mix it with earth

# MAURICE F. DELANO

SUCCESSOR TO

## OWEN FARMS

## SALUTATORY

The most important sale ever made in the fancy poultry world has just been completed and I am now the fortunate **SOLE OWNER** of the entire **OWEN FARMS** flocks without reserve and including every mating exactly as made for 1913. On page      in this issue you will find an announcement from Mr. Owen that will give you his reasons for selling. My reasons for buying are self-evident. It is the proudest day of my life to succeed to the Owen Farms business and become owner of the flocks which I have managed during the past eight years. And I hereby pledge myself to every past customer of Owen Farms and to every present and future customer of Maurice F. Delano, that I will leave no stone unturned to give each and every one absolute satisfaction and full value for every dollar entrusted to me. It is my ambition to keep up and even enhance the reputation for absolute squareness that was so dear to Mr. Owen's heart and which brought to Owen Farms the largest trade on record in the history of the poultry business.

## Specials for This Month

I have a larger number of chicks April 10th than Owen Farms ever had on that date before, and will need to set fewer eggs in May and June than we have previously required. So have decided to give my customers full advantage of our successful season by reducing the price of eggs from all matings and not waiting for the usual June 1st.

## HALF PRICE ON EGGS

50c each. \$20.00 per 50. \$37.50 per 100. From the **BEST PENS** in existence. \$2.50 per 15. \$15.00 per 100. From **GRAND GOOD** matings.

**Buff, Black and White Orpingtons, White Rocks, White Wyandottes and Single Comb Reds**

**THIS IS YOUR OPPORTUNITY**

## SPECIAL STOCK SALE

Owen Farms listed in their 1913 mating list twenty pens each in Buff and White Orpingtons, White Rocks and White Wyandottes. I will sell five pens in each of these varieties exactly as mated for 1913. I will sell **ALL** of the matings of S. C. Reds and Black Orpingtons exactly as mated. Select from the mating list the pen you want and I will name a price for immediate delivery that you will accept, thus giving you the use of it this season. This sale will close in the first four varieties when five pens of each have been sold. The remaining sixty pens I will retain.

This **OPPORTUNITY** has **NEVER** been yours before. **REMEMBER!** these pens are exactly as we mated them for our own use.

In September I expect to issue a complete illustrated catalogue. Until then copies of Owen Farms catalogue and mating list will be gladly mailed you.

**Try the Delano way and receive Delano treatment and you will remain a permanent Delano customer.**

**Address, Maurice F. Delano** Maurice F. Delano, Prop. Frank H. Davey, Supt. **107 William St., Vineyard Haven, Mass.**

so it will not be too strong, and then, at a close following operation, drop beet seed, rape seed or whatever, cover the same with neatness and dispatch, and firm down at the last just as you do with the flat of your hoe when you plant cucumbers. Now about the

#### Fertilizer Part.

The poultry droppings under the roofless roost must be collected in a dry time. Here is one advantage of a semi-arid region, for instance, one of twenty-six and one-half inches rain annually. That is just the poultry notch exactly. A plenty for growing green stuff galore and at the same time lots of dry spells, when the poultry manure under out of door perches may be gathered and stored in a perfectly dry condition. And now again for a machine. It must be perfectly adapted to grinding the manure till it is almost as fine as bran. No gravel in it larger than what you have given the fowls, for this isn't a gravelly district. The horseless seeder should hold at least two or three bushels of fertilizer, and perhaps more, for it is supposed to be raked up carefully and not to have enough soil in it to make it heavy.

What a mighty force the poultryman will have at command. A fertilizer worth thirty dollars a ton as commercial fertilizers go, with a potency almost equal to that of Peruvian guano. How many of my readers know that several writers have independently arrived at the conclusion that the droppings of a flock of fowls carefully gathered, stored and applied for agricultural purposes are worth almost half the cost of the grain the fowls consumed? I do not know as anything more than reasonable guesses have

been made in this matter, but the Stations should take hold of the problem and work it down to statistics. Poultrymen are entitled to the figures in dollars and cents straight. Among the

#### Many Things.

the planning of a big poultry plant here involves, this problem of poultry fertilizer leads way off into wider considerations than at first appears.

Mind, the quantity of droppings needed in growing what greens the birds can eat isn't probably a tenth of what you will have, kept dry in the store house. The soil is rich, anyhow, by nature, but it is well to add a regular hot house sort of forcing to give the beets a lush growth of tops and to make the rape start up again quickly every time you cut it, which can be done over and over again. When you have used all the stimulator you need on your garden of greens, what must be done with the remaining nine-tenths or so? Sell it, would be the proper answer only just here you run against a circumstance. Truck gardeners are, ninety-nine times out of a hundred, ignorant of its great value. There are plenty of truck raisers in Texas, but a long campaign of education will be necessary before they will part with

#### Silver for Ammonia.

to any great extent. So what must be done? Why the poultryman is forced to become a grain farmer. He better not be one if he can help it, his time, capital, energy and thinking powers all being needed on his poultry, but how can he help it?

And now the question arises, what grain shall he raise? Indian corn ob-

viously, if that crop is proper to the locality. Well, it flourishes here sometimes. The predecessors of the English and the Spanish raised it, ground it by hand between two stones and lived on it here for numbered centuries. Like tobacco it originated down this way. But southwest Texas is not strictly in the corn belt as Iowa, Kansas, and six or eight other states are. But the seeds of the non-saccharine cane group are pre-eminently at home here. Always raise what is at home. You can raise oranges in Alaska, but better not do it. As there is no domestic animal pre-eminently adapted to the southwest but the fowl, so there is no

#### Food for Fowls.

that is so pre-eminently adapted for being produced here as non-saccharine cane seed. Of the three principal kinds, Milo Maize, Kaffir Corn and Egyptian wheat, the best is the last named. It can be harvested over and over again without reseeding as it springs vigorously from the stubble after being cut. Though it grows well on the rich natural prairie it yields still better under fertilization.

The horseless cultivator, also the seeder aforesaid, both in modified forms, will be used to advantage raising cane seed. When Egyptian wheat is put in, tended and harvested, to as good advantage as corn is in the loose soil district of Nebraska, where by using the lister and four row cultivator, one man can raise one hundred and fifty acres in a year; the volume of splendid nutritious grain this bountiful sun and soil will yield will astonish the world. There is no reason why the lay of the

# ALDRICH WHITE ORPINGTONS

Have proved their superior quality by winning one hundred and fifty-one prizes at all the leading shows in America during the past two years. Our customers have won in the best shows in all sections of the country, with birds purchased from us or hatched from eggs from our pens.

## THIRTY GRAND PENS

Our thirty mated pens are the best ever mated in the world, as these pens contain over 200 trap-nested prize winning females, each headed by a prize winning male at America's best shows of this and last season. Never before has such value been offered in eggs of such high quality, and at such reasonable prices.

### WHY EXPERIMENT

When you can get the very best by trusting us with your order. From May 10th to June 1st, our eggs will be \$3, \$6 and \$10 per setting of 15, and after June 1st, all eggs at half price or \$2.50, \$5, \$7.50 per setting. We will also offer a limited number of eggs from our sales stock pens at \$15 a hundred. We guarantee satisfaction to all customers. The following letters are a little evidence of the reasons of ours and our customers' success:

Irondequoit, N. Y., Dec. 1st, 1912.

Aldrich Poultry Farm, Columbus, Ohio.  
Gentlemen:—Am just back from judging the Ridgeway, Pa., Show, one of the very largest and best of the early shows, with the White Orpingtons, a leading class and found the first and second cockerels and the first pen females were all hatched from one setting of eggs bought from you last Spring. I consider this a phenomenal record and the assurance of quality and full value for your customers. We want more breeders like you. Yours very truly,  
H. P. Schwab.

138 Richton Ave., Detroit, Mich., March 24, 1913.

Aldrich Poultry Farm, Columbus, Ohio.  
Gentlemen:—I received the bird you shipped me on the 20th inst. in first class condition. He arrived here the 21st. I am extremely pleased with the selection you have made for me, the bird is more than I had dared to expect. After a recent experience from another poultryman which was entirely unsatisfactory, it pleases me greatly to know that the Aldrich people send something better and above expectations. Wishing you success, and assuring you my patronage in the future, I remain, Yours very truly, E. J. Gibb.

Send for our new catalogue with colored plates, and place your order early to insure delivery at any certain date. During May we can supply a limited number of high-class utility pens at \$20, and will include a setting of \$5 eggs. Pens of selected breeders at \$50, \$75 and \$100. Mention American Poultry Journal when writing.

**Aldrich Poultry Farm, R. F. D. 7, Columbus, Ohio**

land and quality of soil will not admit the use of the finest, most perfect machinery.

At present the non-saccharine canes are all planted and gathered here in ways so clumsy as to use up more than four times the labor necessary. Nature being so bounteous, and man so dull, the words recur:

"Every prospect pleases and only man is vile."

The harvesting part, as regards the poultryman's strong point, Egyptian wheat will very likely be met by the new perambulating threshing machines illustrated and described in a late number of *Literary Digest*. For a generation, grain has been cut and hauled to the thrasher. The new invention has a thrasher of a new sort, mounted on wheels, to be moved through the grain fields threshing the heads as they stand, winnowing and delivering the grain into bags ready to be tied up. Note the curious transposition. The stationary machine threshes the grain and afterwards by powerful currents of air winnows it and blows the straw to a stack. But the perambulating machine applies the air current at the start, to force the heads of grain within reach of the threshing teeth. The wheat straw, or stalks if cane is the crop is not gathered at all but left where it grew. In other words the air current is applied before threshing instead of afterwards.

See, according to what I have written what can be done by machinery, and will be done in this best part of Uncle Sam's whole farm, in the not distant future. Already in this great coastal plain, massive steam plows are at work. Rows of them in sight at once. Powerful fellows that rip right through the roots of bushes as big as your wrist, saving the laborious hand grubbing by gangs of Mexican peons, that was lately prevalent. The enormous fields, some of them not hundreds but thousands of acres in extent, turned over in a season, are a pledge of what machinery applied to the soil will do here, and nothing that I have said above regarding raising rape and other green stuff, and the wonderful wealth-producing Egyptian wheat, for the greatest poultry producing region mother earth has ever furnished, is at all exaggerated in forecasting.

The best farm machinery ever known, the best labor-saving poultry appliances and the best transportation facilities, in a region by nature the best, will raise and market poultry and eggs to the best advantage ever known.

\* \* \*

In an official account of the National Egg Contest for January, at Mountain Grove, Mo., we read:

Where we are keeping 28 different kinds of feed before the hens at all times, and are allowing them to help themselves, we are getting the best results. How long this will continue, we cannot say. If hens will lay as many or more eggs where the feed is kept before them, it will save a great deal of labor in feeding. This may work in winter, but we have our doubts about it in the summer. They have eaten exactly the same amount of wheat as they have of corn, 44 pounds of each. They have eaten about three times as much corn and wheat as of any other one kind of feed. Rolled oats, millet and sunflower seed come next. They have eaten but little ground food of any kind. They are drinking about the same amount of buttermilk as water.

Am very glad Mr. Quisenberry is mak-

ing this particular experiment and one which is destined to be tried a great many times, and in favor of the "all sorts before the birds always." Wish, however, that in the obvious intent to be fair the matter of supplying many sorts had not been a little bit overdone.

It is a case of standing up so straight as to lean over backwards. There is an embarrassment of riches. The birds will eat somewhere near the kinds they ought, but the fact that there are so many grades and shades of protein content will lead them sometimes to swallow something they do not need in order

to get at something they do need. The main matching up business is bound to turn on protein content and carbon content. One or two highly proteinized and one or two highly carbonized articles will enable a bird to quickly and unerringly "balance up" without getting completely satiated with nondecisive combinations while trying to balance; as often would be the case while sampling a number of sorts that are not of marked character but just betwixt and between.

I read the above to a friend who did not see why the fowls couldn't succeed

## ONLYA FARM WHITE WYANDOTTES

**High Quality Day-Old Chicks and Eggs**—From twenty carefully mated pens, which contain our many winners at such shows as Madison Square Garden, Grand Central Palace, Boston, Allentown, Augusta, Chicago, etc. Our birds having won at these shows many firsts and specials in the hottest kind of competition. Every bird shown, as well as every bird in our breeding pens, has been raised by us on our farm and banded with our seamless leg band. **Chicks, \$1, 50c and 30c each. Eggs, \$10, \$5 and \$3 per 15.** Breeding and show birds for sale. Cockerels and pullets, \$2 and up. Write for mating list.

Chas. Staaff, Manager

Florham Park, N. J.

## Tested Tried and True

## S. C. Buff Orpingtons

**Remember**—Your success or failure depends on the foundation stock. From inferior blood lines you can not produce high grade stock. The higher grade of stock you produce the better prices they will command.

**Bear in Mind**—Roseland Buff Orpingtons represent the finished product of many years of careful breeding. Our whole attention was devoted to their higher development. Just how we succeeded can be better told by our big wins at

### Chicago, Pittsburg and Cleveland

**Our 1913 Matings**—We believe some of the best Buff Orpingtons ever bred will be from our 1913 matings. Every one of our 20 or more matings will be headed by a prize winner or a bird sired by a prize winner. The same can be said of every female. Before placing your order we want you to send for our mating list. If you want winners get Roseland strain, the tested, tried and true strain of quality. **Breeding Stock for Sale.** Grand breeding birds for sale at reasonable prices.

### ROSELAND POULTRY FARM

CHAS. W. SWITZER, Proprietor

: : SOUTH EUCLID, OHIO

easily with twenty-eight sorts to choose from and so I gave him the following illustration:

You are to match sticks from a big wood pile in pairs as regards their straightness or crookedness. Pair one that is pretty straight with a crooked one and keep on doing it, and be quick about it. Now if the pile consists entirely of quite straight and decidedly crooked sticks, your task will be easy. But if the sorts shade into one another by hardly discernable grades, the matching up, domino fashion will be very imperfectly done in some cases.

Now man or fowl or any other animal, when well dosed with carbon instinctively seeks something distinctively proteinous and cannot match up well when it cannot quickly tell tother from which.

When Thoreau made up the commissary stores, for a trip in the primeval Maine woods, he put in, he said:

What if it had been lemon juice with water, in many bottles, some of it strong, and some so weak it could hardly run down hill.

Thoreau's over-greased digestive machinery calls loudly for acid, and he goes to the box and imbibes a bottleful which proves so weak as to be ineffective, but the unfortunate philosopher, being now filled up to his chin, has lost his chance.

In practice, corn and Egyptian wheat at one extreme and finely ground beef scrap and bran at the other, would be suitable and everywhere available.

But how about the green stuff? The excerpt from Prof. Quisenberry does not say. Both carbonaceous and proteinous qualities aside, I insist that, "before them all the time," there must be perfectly fresh greens. Not dirty, wilted, trampled stuff. And it must be chopped or of such a nature that it can be picked off readily, and must be of a sort they like, not such as some poultry keepers provide consisting of bitter lettuce or something else they will take to only as a last resort. And I do not warrant my prescription unless fowls are vigorous at the start, and not too closely confined or subjected to other debilitating influence.

Mr. Quisenberry, the director, says the trial "may work well in winter" but he has "doubts about it in summer." That's the very time it will shine. If heat or exhaustion from previous laying, or from moulting or anything else is unusually trying, then it is that "all sorts all the time" will operate to peculiar advantage because comprising

#### Fresh Vegetable Element.

Harvest hands under the hardest toil in the hottest weather stand to their

work well on meat with much fat in it, along with plenty of vegetables, both raw and cooked, and fresh berries which are like "lemons to correct the pork."

I expect that the flock in question will excel in the whole year's laying, and also as regards continued health and thrift; but if not shall insist that some untoward circumstance interfered, and that over and over again, by trials in all parts of the country, my position will be vindicated.

No animal can get into, and swim in, a full tide of health except under full feed. The season that all wild birds nest and incubate is when there is abundant food. Dr. Woods Hutchinson has lately insisted vigorously in a magazine article, that the creed of abstemious diet and cutting out rich foods so popular for the last twenty years is a foolish fad. He says, in substance, that more people suffer from underfeeding than from overfeeding, and that not merely plenty of food must be available if people are to be well and strong, but the food must include an abundance of the rich, highly nutritive elements. That continually curbing and restraining the appetite for hearty foods may lead after a while to inability to digest as much rich aliment as the system needs. In short he advises us to eat freely just what we crave the most.

## GREAT COLISEUM POULTRY SHOW

AT CHICAGO, ILLINOIS

Fifth Annual Exhibition--December 12, 13, 14, 15, 16, 1913

**Our Past Record**—Four of the most successful shows ever held in America. **Our Aim**—The world's greatest poultry exhibition. We have paid more premiums and put on more real down-to-the-minute features than any other show in America or abroad. We lead, others follow. If a feature is good, you will always find us first to introduce it. Nearly every act of the Coliseum show has been followed by other successful exhibitions. Look for our 1913 list; it surpasses all the rest. **No Risk, No Chances, Everything Guaranteed**—We, the undersigned stockholders, pledge ourselves, individually and collectively, to pay every premium offered by us that is won by the exhibitors: Ernest Kellerstrass, Reese V. Hicks, E. E. Richards, Frank Hare, Geo. H. Rudy, Jas. W. Bell, A. and E. Tarbox, D. M. Palmer, J. C. Dinamore, H. C. Dippel, C. S. Byers, Chas. G. Pape, A. E. Martz, Wm. A. Stolls, C. C. Coulter, Wm. A. Sibley, Theo. Hewes. Premium list Nov. 1st. Entries close Nov. 25. Your name on a card addressed to the secretary will guarantee that list will be mailed on time.

## YOUNG'S STRAIN S. C. WHITE LEGHORNS

(I HAVE NO OTHER BREEDS)

My strain won every prize and special offered at the world's greatest show, Madison Square Garden, New York, January, 1913. My individual winnings were: Cocks 1-3-4-5-6; hens 2-4-5-6-7; cockerels 1-2-3-6-7; pullets 1-3-5; pens 3-5; Elmhurst trophy, value \$150.00, for best display; New York State Cup, value \$50.00, for best display; New York P. & P. A. Special, value \$25.00, for best display. N. S. C. W. Leghorn Club special for best display; special for best cock; special for best male; special for best shaped male; special for best colored male; special for best headed male; special for best cockerel; special for best pullet; special for best female; diploma presented by A. P. A. for best cockerel. In fact, for the past ten years, my strain has won in every show of any note in the United States and Canada. They are the standard for all the Leghorns of America, and the greatest layers of all varieties of domestic fowl. (Remember you cannot win without my strain.) Mating list free. Address

# S.C.W. Leghorns

THAT LAY, WEIGH AND WIN

OUR SUCCESS, whether it be for the introduction of new blood or laying a foundation for your stock, depends upon the reputation of the man behind the firm from whom you secure your stock or eggs. Believing as I do, that the majority of the people are honest, I stand ready at all times to make good, stock or eggs secured from me, any claims that my customers might present. My business at present has reached such proportions, that it is almost impossible for me to meet the demands with the seven thousand head of stock that I have on hand. It is impossible for me to describe our methods of rearing poultry in so small a space, but if you will send for my illustrated mating list, which is sent free on request, you will receive in a concise form our ideas of a down-to-date poultry plant. Or if you will send fifty cents in stamps or coin, I will send you post-paid my 64-page catalogue which explains in detail every phase of the poultry industry. This book, as is everything else bought of the E. W. Grove, Jr. Poultry Farm, guaranteed satisfactory or your money back.

Now is the time to book your orders for eggs and join the list of satisfied raisers of Grove strain of S. C. White Leghorns. All orders delivered in the order in which they are received. Yours for better poultry,

*E. W. Grove, Jr.*

Route 1  
Clayton, Missouri

It's not the brand on a horse that makes him travel, nor is it fine feathers on a hen that makes her win or lay, but their breeding.

# Current News of the Poultry World

by J. F. Shureman

A certificate of incorporation was recently filed in the county clerk's office in Buffalo, N. Y., by the International Poultry Association, Inc. The concern is capitalized at \$5,000 and was organized to encourage the breeding and exhibiting of poultry, pigeons and domestic animals of all kinds and to hold exhibitions. There are fifteen directors.

Wilford Lau, a poultry fancier of York City, Pa., has a pet White Leghorn hen that has been trained to do a number of stunts and she follows him wherever he goes. When he goes to the postoffice for his mail, the hen goes with him, and if a piece of mail matter is given to her she will carry it home in her bill. She has been trained to jump over a stick, when held several feet high, and will answer to Mr. Lau's whistle by cackling. The hen grows frantic when she hears her master approaching and always meets him at the gate.

Poultrymen of Fort Wayne, Indiana, were heavy losers in the recent flood. Among others who lost not only most of their high-class poultry, but equipment as well, were Clifford Whearley, W. M. Klinkel, Theo. Egbert, Samuel Holtzman, William Aiken, John Rising and C. A. Didier. In addition to the loss of the poultry, many lost their equipment, including many modern poultry houses.

Statistics show that the egg production in the United States increased from 450 million dozens in 1880 to 1,300 million dozens in 1900 and 1,705 million dozens in 1912. Exports have also increased, being only 86 thousand dozens in 1880, going up to 5 2-3 million dozens in 1910, 13 1/4 million dozens in 1911, and 19 million dozens last year.

Stewart Hollenbach of the Berks county (Pa.) poor farm near Shillington, has kept a careful record of the work of the mixed flock of between 300 and 400 hens kept on the farm and has decided that hereafter instead of keeping a mixed flock, he will get rid of the stock and keep Rhode Island

Reds exclusively. During 1912 the flock laid 13,930 eggs, all of which were consumed at the institution. In January of the present year they laid 919 eggs, in February 1,388, and in March 2,564. During the Easter month 234 dozens, or 244 more eggs than the hens produced, were served to the inmates. By supplanting the "scrubs" with Rhode Island Reds, Mr. Hollenbach expects to increase the egg yield considerably and make the poultry department of the institution profitable.

The special poultry and egg laboratory and experiment station that has for some time been conducted in Nashville, Tenn., by the United States government, under the direction of H. C. Pierce, was removed in April to Sedalia, Mo. A laboratory has been built for Mr. Pierce by the Commercial Club of Sedalia, and two expert assistants will be furnished him permanently by the State University and the State Poultry Association. Free transportation will be given him and his demonstration car by the railroads of Missouri and an annual allowance of \$1,500 has been appropriated by the poultry industry of the state to help him in his work. In Tennessee he has received little assistance outside of that furnished by the government.

W. H. Manning of Saratoga Springs, N. Y., has been appointed superintendent of the poultry department of the New York State Fair. Mr. Manning is proprietor of the Turtle Point Farm at Saratoga Lake and is one of the largest breeders of Leghorns in the United States.

Charles Litzel of Seville, Ohio, is originating a new variety of poultry to be known as "Red Orpingtons."

The organization of the State Poultry Association of Utah was accomplished at a meeting of representative poultrymen from different parts of the state in Salt Lake City early in April. The association will be incorporated under the laws of Utah and all raisers of poultry within the state will be in-

vited to affiliate with it. Temporary officers were elected as follows: W. L. Bramwell of Ogden, president; A. P. Stone, vice-president; Harlow R. Grow, secretary-treasurer.

Poultrymen in the vicinity of Tulare, Cal., have organized a co-operative stock company, the object of which will be to establish a system of selling eggs direct to the consumer, cutting out the expense of handling through a commission house. The membership fee is \$25.00.

In the last ten years the cattle in the United States have decreased in number 8.7 per cent, swine 7.4 per cent and sheep 14.7 per cent, while in the same period poultry has increased in number 17 per cent. The increase in the number of eggs produced was 23 per cent, and inasmuch as this is considerably more than the percentage of increase in the number of fowls, it indicates that the production per hen has been raised considerably.

A bronze monument to cost \$25,000 will be erected by the poultry fanciers of the United States and Canada to the memory of the late John L. Cost, who about twenty-five years ago established the poultry show held annually in connection with the Hagerstown Fair at Hagerstown, Md. The monument, which is to be erected in front of the new poultry exhibition building on the fair grounds, will have a large marble base which will support a life-size bust of Mr. Cost in bronze.

The Oakland Products Company of Oakland, Ore., has been sued for \$4,050 damages by C. R. Cater, who some time ago bought a tract of land from the company and claims that they have failed to keep their numerous and glowing promises. Cater bought the land with the understanding that the Oakland company promised to teach him to raise poultry, to furnish expert advice and to market his product for him, none of which promises they have kept, according to the statement of Cater. Hence the damage suit.

# CHICK CHATS

by H. P. Schwab

Gee! But it is great to have friends.

Friendship—A friend is one who knows all about you and still loves you.

The winners at the next December and January Shows will be hatched during May and June. Late hatched chicks usually are superior in color. The parti-colored varieties particularly.

The whole continent thrills with the impulse of sympathy and helpfulness toward the people stricken by flood, tempest, fire and famine.

The Philadelphia, Pa., Poultry Association elected the following officers: President, Henry D. Riley; vice-president, R. Sweisfurth; treasurer, C. C. Kempton; secretary, Frank E. Gilbert, Mint Arcade, Philadelphia; directors, H. Ross Smith, W. B. Megargee, Thos. P. Scott, W. W. Deissler. Their next show will likely be held at usual time, December 9 to 13, 1913.

The annual meeting and banquet was well attended and enjoyable. Mr. Gilbert, the new secretary is a prominent Orpington breeder and a man well fitted for this office.

By the time these lines are read the members of the A. P. A. will have voted and elected their officers. The candidates are an unusually efficient and capable set of men, and we look for progress in poultry matters from those elected.

Baron Van Gink has left these shores, we will miss his artistic work and most likely an heiress also will be found missing.

When a woman tells you your coat is wrinkled in the back, and that she does not like your tie, go out and buy the ring.

Haldie Nicholson, Leominster, Mass., is meeting with great success in his Blue varieties of Orpingtons, Wyandottes and Leghorns. His Barred Rocks are also better than ever. In these he breeds the Cockerel line only.

In our travels we are told every day of the value of "Frenches" Poultry Mustard. This is a standard article and the sooner it is universally used, the better for the breeders.

The Dune-Alpin S. C. White Leghorns are making a great stride forward. Manager Geo. Kerr is working harder than ever before. Wonder if he thinks he can surpass his last season's record? We know he will try for it.

He—I love the good, the true, the beautiful.

She—Oh, Courtney! This is so sudden.

Barred Rock breeders, remember the club will very soon issue a catalogue. Join it now. Write Mr. Henry D.

Riley, secretary, Strafford, Pa., for particulars. Membership fee is \$1.

We have neither seen nor heard of any sectional strife among the members of the A. P. A. We believe a majority of the A. P. A. members are in the west, and that it is to hold that vote for a western candidate that such a silly cry has been sent forth.

Play fair. No personal nor sectional questions should have weight in A. P. A. matters. Let the election proceed, and let us all cheerfully abide by the result. The good of the association and the success of the industry is our only aim.

We lately spent part of a day with Mr. J. Courtney Punderford at his home and farm at Freneau, N. J. Mr. Punderford's Buff and White Leghorns are becoming as popular as Pundy himself. We go there once a year to see what Golden Buff is.

In his office and on his desk Mr. Punderford has a unique relic called the Fizz-Bell that was captured at Tarrytown and presented to him by Major-General Harcombe.

This rainy season we are having does not help the chicks or breeders any and has delayed our travels. We fear we will have to miss some of our friends in this.

Buffalo, N. Y., promises to have two shows the coming season. One in November and the other in January. This is a mistake.

O. K. Litter is becoming a general favorite with the breeders.

We had hoped to have the dates for the next M. S. Garden New York show; this, and fear notice has missed us on the road.

Frank McGrann, Lancaster, Pa., has nearly 1,000 Black Minorcas hatched, some large enough to crow. With the grand quality he has bred for years we expect to see him back in the show ring again. He owes it to the variety to exhibit. People want to see his kind.

The Newtown Producing Co., with Mr. E. E. Winchel in charge of their poultry have out thousands of chicks in their varieties of S. C. White Leghorns, Barred Rocks and S. C. Reds. Their matings are all of the quality kind and the chicks look extra good to us. Mr. Winchel is a specialist with Leghorns and Rocks and we look to him to show this excellent line at their true worth.

There is only one thing that a woman dislikes more than a jealous husband, and that is one that isn't jealous.

Hatch all the chicks you can in May

and June. The real winter winners are hatched in those months.

At our visits to the Oakland farms we met for the first time Mr. G. C. Roberts, the new manager. We wish him every success. The Oakland Leghorns and Reds have been carefully bred for many years and have given satisfaction.

We repeat. Keep them growing.

It is proposed, and we think it a capital idea, that the Barred Rock Club have a special committee appointed to work with the A. P. A. committee on revising the Barred Rock standard.

## Are They Safe?

IF THERE IS A DOUBT in your mind as to the safety of APPCO SHIPSAFES for Parcels Post or Express, read this:

Pomona, California.  
Gentlemen:  
"To test the Appco Shipsafe I sent a setting of eggs Parcels Post to New York City. It was taken up by the rural carrier in the usual manner, and arrived safe, sound and perfect. The Appco Shipsafe is safe."

## Breeding and Exhibition Stock Baby Chicks and Eggs

Buff and White Orpingtons    White Wyandottes  
S. C. and R. C. R. I. Reds    White Leghorns  
Buff Leghorns    Indian Runner Ducks

At eight of the leading shows of the United  
States we have won

## 260 PRIZES

For the breeding season of 1913 we have mated up 35 pens of grand qual-  
ity, and in addition individual and colony pens aggregating nearly 1,000  
splendid breeders. Over 2,500 birds were available for selection, a number  
amply sufficient to insure the highest of quality.

At LaGrangeville, N. Y., we have our 160-acre farm which is admirably  
adapted for a great poultry producing plant. At Bryn Mawr Park, Yonkers,  
N. Y., is our metropolitan branch plant where we have several of our choic-  
est breeding pens of each variety, and also have on hand and for sale stock  
the finest quality. Bryn Mawr Park station is only ten miles from N. Y. City.

All our stock has been raised on free range, which with us means  
fields, woods and orchards.

## Special Prices on Fine Breeding Stock

Cocks, \$5.00 and up; Hens, \$3.50 and up; Cockerels, \$5.00 and up;  
Pullets, \$3.50 and up. Prices on exhibition stock quoted on request.

The chick crop of 1912 was much below the average, consequently the  
demand for baby chicks, eggs and stock is unusually large this season. We  
therefore recommend early placing of orders. By ordering now and making a  
small deposit customers may insure for themselves shipment on date selected  
by them.

All our baby chicks are hatched in Hall Mammoth Hot Water Incubators  
and are equal in every respect to hen hatched chicks.

Catalog, with prices of eggs, baby chicks and stock, now ready. Send for copy.

Route 12,    Bryn Mawr Park,    Yonkers, New York

**BREEDING WHITE ORPINGTONS.**

**T**HE RIGHT WAY to breed White Orpingtons is to get the very best foundation stock you can possibly afford to buy, from some thoroughly reliable breeder who has the blood lines and is producing the winning birds at our best shows; not the man who has one individual good bird, but the man who can produce a string of winners in males and females.

The male is certainly the most important feature, and is half the pen, but don't run away with the idea that if you have a good male and poor females you are going to breed winners, because you are not. To breed high class White Orpingtons you should select a male bird not overly large, of as pure color as possible, as I have proved beyond doubt that color comes from the male, and shape from the female; also see that your male has good eye color, with a neat comb firm at the base and straight in front, free from creases and thumb marks, and don't think because a bird has one serration too many that he is no good, as you can always remedy this by selecting females with too few serrations. Of course, if you can get a male with a perfect five point comb, so much the better, but in breeding high class Orpingtons there are other things far more important than comb. Select a male with a good, broad back, wide clear back to the tail, which should be low and wide spread, as you get your top lines from the male bird. Also get a round bone fairly short on shank, with as white leg as possible, which should be wide and stand well apart with the body of the bird equally balanced; get a good wide front, but this is more important in the female. Always remember that in the White Orpington male you get your color, head points and top lines and

tail carriage, and don't run away with the idea that you need a great big male. This is the great mistake the amateur always makes, as I have proved this times without number.

When I was manager for W. L. Horbury of Bromborough, England, I bred first and fourth cockerels, first and fifth pullets at the great Dairy Show 1910, a feat never before or since repeated, also bred the cock birds Miss Carey made such phenomenal winnings with at the Crystal Palace Birmingham Club Show and Madison Square Garden in 1911, from a cock that never weighed above 8 lbs. at his best, but was mated to large, shapely females, hens and pullets, that were all good deep keels, broad backs and good bone.

Now for the females always select large shapely females, with good full fronts, deep keel, long broad backs, with a fairly low well spread tail, also with good round bone, not too long in shank. Always avoid the heavy featured, large looking, light weight females, but select good deep bodies not too heavily feathered, that are solid and of fairly good weight; the standard weight female will make an ideal breeder. Always select females with good white hackles, as brassy necked females breed brassy males in every case, but color is more important in male than in female, only get them both white and breed them the way I have outlined and it will be only a short while before the brassy males are a thing of the past. A most important thing in White Orpingtons is not to breed them too short in body, as they will then lose their utility value, as a hen has got to have room to form her eggs and shell them out.

I have bred most varieties of poultry and bantams, but I have yet to breed the fowl that can equal the White Orpington as an all round breed; as table fowls they have no equal, as egg layers they are unsurpassed; they grow

quickly and mature rapidly, thus making them ahead as broilers, and their meat is sweet and juicy.

To any one contemplating entering the poultry business for profit and pleasure, I can from experience, thoroughly recommend the White Orpington, and remember the best is always the cheapest in the long run, as quality is always remembered long after price is forgotten.

L. Rawnsley,  
Supt. Aldrich Poultry Farm.

## SHALL WE ESTABLISH CHAMPIONS?

Dr. Milton J. Waas.

UNDER THE STANDARD of Perfection a perfect bird should score 100, but such a score has never yet been attained by any specimen. As a matter of fact it is almost impossible to imagine a bird perfect in every detail. We certainly should approach the ideal more closely than we have and to aid in this direction all birds should be scored. It is only thus the novice can detect the faults in his birds, but in the large shows this would be an enormous task for the judges. As a compromise between the two, I would suggest that at the request of the owner of any bird or birds winning place, one to five, or any bird or birds that could score up to ninety (or make it higher if you wish) the judge should give a score card over his signature. It is easy for an expert judge of birds to tell almost at a glance whether a bird would score up to ninety or not and would require very little extra time. This would make quite a satisfactory arrangement.

In pedigreed birds I would suggest that certain noted winners, under certain conditions, be called Champions. In order to call a bird a Champion I would suggest either one of two methods:—first, that a bird to be a Champion must have scored not less than ninety points and won first place under at least two separate judges in shows with not less than 1,000 birds entered and held under the American Poultry Association rules; or, second, that a bird score not less than ninety points and have won first place under at least two separate judges and to have a credit of at least 15 units, a unit to be based as follows:—a bird scoring not less than ninety points and winning first place to be given a credit for one (1) unit in a show with not less than 300 entries and held under the American Poultry Association rules; given a credit of two (2) units for a show of at least 400 birds, or three (3) units for a show of at least 500 birds, etc., and that any bird or birds so doing may then be entitled a Champion. All birds winning a first and scored not less than ninety under at least two different judges to be registered at a fee of \$1.00 in the National Club of their respective breed, The National Club of each breed in turn to hand over a list of all recorded birds to the American Poultry Association at its National meeting each year, who would then issue a book containing the name and number of all such birds. For each bird so registered a certificate of registration would be sent to the breeder. All deaths or sale of such birds to be noted in the succeeding issues of the book. Methods can be devised to prevent faking much easier than might be imagined.

The second of the two plans outlined above is to my mind much the better, as it allows a smaller breeder to have a registered stud but at the same time it makes it difficult to breed a bird that might be claimed a Champion. This leads up to the point that men and women who would take the pains to breed and care for and register such fine specimens would be willing and careful enough to trap-nest their birds and mark every egg indelibly and accurately as taken from the nest, thus

## COLUMBIAN WYANDOTTES

Beautiful—Profitable—Great Winter Layers—Prizes at leading shows. At Baltimore, 1913, on 7 entries, won 7 prizes and 3 specials. Stock and eggs for sale. State what you want. Circular free. Please mention A. P. J. H. H. Hewitt Box 427 Williamsburg, Pennsylvania

## \$1.00 SECURES ONE HUNDRED CHICKS OR EGGS

Wyckoff-Blanchard Finest White Leghorns—Line bred twenty years for fancy points and heavy laying. 57 acre farm. 900 breeders. 5,000 chicks a month. We guarantee safe arrival of eggs and chicks and 90 per cent fertility. Catalog free. Eggs, 15 for \$1.50, 100 for \$5. Chicks, 50 for \$5.50, 100 for \$10. Cockerels, \$3 to \$10. to use. White or brown shells—no difference. Rapid and positive. Use for one year at our risk, and if not satisfied cost refunded. Price \$2.00 each, by mail, postpaid. Prompt attention.

**MAGIC EGG TESTER WORKS**

**Dept. B.**

**BUFFALO, N. Y. and BRIDGEBURG, CAN.**

insuring an accurate record and pedigree of every egg. What purchaser would not feel better satisfied if such conditions prevailed, and who would he be most likely to purchase from? Some such method will have to be adopted, not necessarily either of these plans, but one of similar character.

This everlasting question of which is best in-and-in breeding, line breeding, in-and-out breeding, and out-and-out breeding, etc., would, in a few years, be definitely settled by unquestionable records. After that time results would no longer be haphazard, they would be definite.

This is already being done to a certain extent for the utility breeder by the Egg Contests now being conducted in different parts of the country. It would also be a good thing to register these birds and watch their progeny for several generations. We could then find if the female that produces such a great number of eggs is capable of laying at the same time good healthy, hatchable eggs producing healthy, vigorous offspring. It would also prove whether the laying ability is transmitted to future female generations mainly by the male or female parent, which point at the present time seems to be in doubt.

As an example of the benefits that would be derived from this, we can take the case of "Lady Show You," the pullet that was the highest scoring individual in the last Missouri Egg Contest, immediately after which she was sold for \$800. Such a price could not have been obtained for the bird under any other conditions as it was only due to the unquestionable records that the phenomenal accomplishment of the bird was accepted. In the same way the value of all registered birds would be enhanced.

In conclusion I would suggest that this matter or any improvements that may be suggested on this outline in the meantime, be presented before the American Poultry Association at the next Annual Meeting and thoroughly discussed and acted upon at that time.

View of part of the colony houses on the farm of N. V. Fogg, Mt. Sterling, Ky., where he keeps his Single Comb White Leghorns.

# For the Registration of the Anconas

Steps Taken by Canadian Mottled Ancona Club  
That Will Prove Interesting

By A. H. Hall

THE CANADIAN MOTTLED Ancona Club have recently adopted certain conditions of registration which may prove of interest to fanciers generally. They have also a carefully revised Standard of Perfection, by which all birds of this variety are judged. This standard is based upon the American Standard of Perfection, with simply a definite outline, showing the judge exactly how the bird must be scored together with the fact that he is responsible to the club for his judgment and that if in a comparison show or otherwise where there is close competition he must judge the birds as if a score card was actually used. Should a recognized judge score any bird different from the Standard he must answer to the club for his action, and if they see fit they can suspend or disqualify him as a judge of Anconas.

Every member of this club is also responsible for his dealings with all other members. The club is prepared to register all birds, whether American or Canadian bred, whether shown at an American or Canadian show, providing the judge, judging the birds is recognized as a Canadian Mottled Ancona judge, it matters not whether he is a Canadian or an

American, if he is a member of our club in good standing and prepared to conform to the conditions of the club. If he is not a member, we have no control over him and consequently cannot be responsible for his actions, and will not accept his judgments as being valid for registration.

We will be pleased to see any of our American brethren come into our association, and will guarantee them the assistance and co-operation which we as members enjoy. We do not ask you, gentlemen, to accept our judges, but ask your own men to qualify. All we want is that in each and every case the best birds win, regardless of who is the owner, and that in breeding we know when we go to the show room it is not some man's fad or fancy that wins, but absolutely desirable points that count.

Conditions for the registration of Anconas in our club are as follows.

First. That a bird, in order to be eligible for registration, must have won at least three prizes, at any of the recognized poultry shows, in a competition of at least three birds.

Second. That the person so wishing to register these birds must become a member of the Canadian Mottled Ancona

## S. C. W. LEGHORN EGGS AND CHICKS

That will develop into exhibition birds and heavy layers. Our Baby Chicks are the kind that live. I guarantee safe arrival of eggs and chicks. Write me.

N. V. FOGG :: BOX R :: MT. STERLING, KY.

## Duston's White Wyandottes

Always in demand because they win and breed winners, besides unequaled as layers. Have already sold winners for next season. I want to quote YOU now, to win that fall or winter show. If you want to win, just give a chance to the breeder that has made possible the "world's best flocks." It's not too late to hatch winners for winter.

Elegant pens \$10 per set, two sets \$18, three sets \$25, or \$50 in 100 lots. I'll be glad to send my mating list, free, or one of the richest catalogs published for 15 cents in stamps.

Arthur G. Duston, Box 1020, So. Framingham, Mass.

## COCHIN BANTAMS

Black : Buff : Partridge : White

Our strain of Cochin Bantams have won the leading honors at America's Greatest Shows for years; and during the past fall and winter our birds won 91 firsts out of a possible 109 at Chicago, Indianapolis, Louisville, Indiana, Tennessee and Tri-State Fairs.

Write for our beautiful 1913 Mating List, describing the 25 MOST WONDERFUL PENS EVER MATED. Remember that this is the HOME of

## THE CYCLE

### Hatches in NATURE'S Way

Because it follows natural principles. These points found in the Cycle will appeal to you—they are vital to success. First: The heated air is applied on top of the eggs only, as under the hen. Second: No direct air passes through the hatcher to carry off the natural moisture in the egg. Third: Being circular with the lamp in the center, the radiation is equal throughout the machine. Fourth: The heat is brought close to the eggs with no waste of heated air space. Fifth: The eggs are turned and cooled similar to nature's way. Study the hen and investigate the Cycle. It will pay you.

CYCLE HATCHERS, - \$6.00

Club before his birds will be registered.

Third. Young birds hatched after May 1, 1913, bred from a registered male and female, will require to win at least one first, shown before a recognized Canadian Ancona Club judge, in the competition of at least six birds, and each succeeding generation will require to be exhibited in the competition of at least ten birds and win a first before a recognized Ancona Club judge, before they will be eligible for registration. Said registrations to exist for at least five years before and birds can be registered without having won a first prize.

Fourth. In the case of the registrar having any doubts as to the merits of any bird, as to whether he considers the bird eligible for registration, he can request the member applying for such registration to forward his bird to a recognized Ancona Club judge, who will judge the bird with a score card and forward the score card to the registrar, with a written report thereon, for which he will charge a fee of fifty cents, which expense will be borne by the owner of the bird, and the bird must score at least eighty

points, according to the Canadian Mottled Ancona Club Standard of Perfection.

Fifth. A blank form of application for registration shall be furnished by the registrar, upon application, which must be carefully filled in and sworn to before a justice of the peace, and only one bird entered on each blank form of application.

Sixth. Upon returning the application, duly filled in, together with a fee of one dollar per bird, the registrar will register the bird with a name and number, in a book kept for this purpose, and furnish the owner of said bird with a certificate to the effect that his bird is duly registered.

Seventh. Any person having birds so registered, upon the death or sale of any so registered bird, must notify the registrar of such death or sale within fifteen days from the occurrence, and shall be under a penalty to the club of twenty-five cents per day for every day he neglects or omits to report such death or sale after the fifteenth day, or a cancellation of all his registered birds, together with disqualification as a member

## FISKE'S WHITE LEGHORNS

Were the talk of Madison Square Garden where they won 2d, 7th and 8th on cocks; 3d and 8th on hens; 4th, 5th and 8th on cockerels; 2d, 4th, 6th and 7th on pullets and 1st and 4th on pens; our first pen winning over the first Madison Square Garden pen of last year and the first pen at the New York Palace Show this year. A few males for sale, send for mating list. Mention American Poultry Journal when writing.

Skylands Farm, Harlo J. Fiske, Mgr., Sterlington, N. Y.

### GRIMM'S CONVERTABLE BROODERS

The roomiest steel brooder made. The wood bottoms are chemically treated which makes them immune from lice, mites, and rats will not gnaw them. Vermin proof. Write for our circulars and read what many satisfied users say. \$1.85 without yard, \$2.50 with yard, Hovers 60 cents. Heaters \$1.50 complete (top heat) Makes a safe place for the setting hen.

10 square feet of floor space in brooder and yard. Size of brooder 2 1/2 feet long, 2 feet wide and 18 inches high. Yard same size. They are built for continuous service, are light weight, dry, strong, large, well ventilated, easily cleaned and kept clean. Saves time, saves money, saves troubles and saves the chicks.

G. F. GRIMM MANUFACTURING CO.  
517 West Main Street Atchison, Kansas

## Only Live Chicks Count

It is not the number of chicks hatched, but the number raised, that makes a poultry farm profitable. Chicks trampled to death or smothered in the brooding represent loss.

## International SANITARY HOVER

The only hover that is warmer near the curtain than at the center. This, by causing the chicks to distribute themselves near the edge of the curtain, prevents crowding and assures plenty of fresh air.

The Sanitary Hover can be picked up and carried around with ease and used anywhere. No carpenter work is required to set it up. It is fireproof, unbreakable, absolutely reliable.

More sales are being made of Sanitary Hovers than of any other two makes combined. Sixty per cent. of the Sanitary Hovers sold are replacing other brooding devices. If you are going to raise chicks this spring, you owe to them to investigate the results achieved with the Sanitary Hover.

Indorsed by Kellerstrass, Owen Farms, Wm. Cook & Sons, and America's leading poultrymen generally. The concerns named are breeders of the highest priced birds in the country. Every chick entrusted to a hover by them represents from \$10 to \$100 in value. They use the Sanitary Hover because they know it can be depended on.

Write for booklet containing a full description of the one perfect brooding device—the Sanitary Hover.

INTERNATIONAL POULTRY SALES CO.,

Write today for illustrated descriptive folder, tells how to save money by using an Afton Farm Mixer. Yardley Mfg. Co., Box D-51, Yardley, Penn.

# Poultry Books

## AT A CUT PRICE

A complete list of poultry books that everybody interested in poultry should have. This list is made up with the idea of supplying the wants of all poultrymen, and covers about every phase of the industry; in fact, this list of books make almost a complete poultry library, and by taking them all at a cut price you will be well equipped to make a success of this business. The books in this list tell you how to line breed, how to feed for egg production, how to reduce your feed bill, how to mate to produce exhibition birds, how to prevent and cure diseases, how to mix a balanced ration, how to build poultry houses, poultry appliances, etc. Following is the list:

### DR. PRINCE T. WOODS' NEW BOOK HOW TO RAISE CHICKS

128 PAGES—35 ILLUSTRATIONS

A down-to-date manual on breeding poultry. Tells in plain language how to select and mate breeding stock, what to feed and how to feed it, how to care for and manage breeding stock, how to select eggs for hatching and how to care for them before and during incubation, how to get good hatches with incubators, how to raise chicks with hens and brooders, how to prepare home-made chick foods, how to build brood and colony coops. It also gives facts about White Diarrhoea, including prevention and treatment, and much other valuable information that cannot be obtained elsewhere. **Price 75 cents.**

### OPEN-AIR POULTRY HOUSES FOR ALL CLIMATES

By Prince T. Woods, America's Leading Authority on Practical Poultry Keeping

The best house book ever published. Be sure to read it before you build or make alterations in your poultry houses. 88 pages and 46 illustrations. Tells how to build the kind of houses that the most successful breeders all over the country are building and recommending. The "Fresh-Air House" has come to stay and you will want to build one. It means better fowls, freedom from disease in the flocks, better egg yield, better fertility, better chicks. **No matter where you live, if you keep poultry you need this book. This book gives full plans and specifications. Price 75 cents.**

### Origin and History of All Breeds of Poultry

This book gives a complete history and the origin of all the recognized varieties of chickens, ducks, geese and turkeys, and is illustrated with 198 colored pictures of fowls painted from life, something never before attempted by any publisher. This is, without question, the greatest book ever published on poultry. The artist's work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shape, and these colored pictures, together with the history of each variety, gives the fancier all the information to produce fowls for either exhibition or breeding.

**How to Mate**—This book also tells how to properly mate the different varieties of fowls to produce birds that will conform to standard requirements. This is something that even the Standard of Perfection does not do. It tells you at a glance what it will take years of practical experience to learn. It is a book that no breeder or fancier can afford to be without, as it is just as suitable for the needs of the experienced fancier as for the amateur. **Price \$1.00.**

### Successful Poultry Culture

Contains 128 pages and is a practical treatise on everything you want to know about the poultry business. It tells you his method of **saving three-fourths the feed bill**, and many other valuable pointers which will save you many times the price of the book.

Space will not permit a detailed description of the entire book, but the following will give you an excellent idea as to its great value. Besides 30 illustrations of standard bred poultry and poultry houses, it contains chapters on the following subjects: The Way to Succeed; Some Interesting Poultry Statistics; The Pleasure of Poultry Culture; Advice to Beginners; Poultry and Pin Money for Women; Boys and Poultry Culture; Poultry on the Farm; How to Succeed on a Small City Lot; How to Succeed with a Large Market Plant; How to Get Eggs in Winter; How to Feed Young Chickens; Success with Incubators; Success with Brooders; How to Cure Diseases; How to Build Poultry Houses; Plans for Model

Poultry Houses; Profits in Poultry Culture; Scientific Feeding. **Regular price \$1.00.**

### Diseases of Poultry

By D. E. Salmon, D. V. M., Chief of the United States Bureau of Animal Industry. Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill. **Regular price 50 cents.**

### "Why Poultry Pays and How to Make It Pay"

A book for the beginner in poultry raising and for those engaged in it who are interested in deriving from the business the greatest profit. The book tells you how to start right, how to succeed with poultry, how to line breed, how to win at the shows, how to breed and prepare fowls for market, how to feed for the production of eggs, contains a chapter on poultry diseases and simple remedies for same. Gives instructions on incubators and brooders, much other valuable information and is profusely illustrated with ideal drawings of standard fowls. **Price 50c.**

### "How to Build Poultry Houses"

A book devoted to the construction of poultry houses and fixtures, gives plans and specifications for building all kinds of poultry houses, brood coops, nest boxes, dust boxes, shipping coops, etc. It will save money by telling just the kind of house desired for the different localities and the size best suited for the various sized flocks. **Regular price 50c.**

### American Poultry Journal Hand Book

Contains valuable recipes and trade secrets, feed, care and management in health and disease. Pocket size, **15 cents.**

**Total \$5.15---Cut Price for the Eight Books, Prepaid, \$3.40**

This is a saving to you of one-third from the regular price. Better order now before the price is advanced. If you want only a few of these books send in full price, as no reduction is allowed from the list price unless all eight books are ordered. You need all of them. You can also get any 50-cent book and a full year's subscription to American Poultry Journal for \$1.25, a 75-cent book and a full year's subscription to American Poultry Journal for \$1.40, or a \$1.00 book and a full year's subscription to American Poultry Journal for \$1.50.

**AMERICAN POULTRY JOURNAL PUB. CO.**  
**542 SOUTH DEARBORN STREET, CHICAGO, ILLINOIS**

**Imperial Golden Buff Rocks**  
Write for full information of our winnings at America's greatest shows, Madison Square Garden and Boston. Our prices are no more than you pay others that haven't won. **Nescopeck Poultry Farm, S. H. Harter, Prop., Box A, Nescopeck, Pa.**

### S. C. WHITE ORPINGTONS

Win wherever shown in competition with the largest breeders in the country. I won 83 prizes in 5 shows. Eggs \$3 up. Stock reasonable. **Park Poultry Yards Mrs. Reg. Stonestreet, Glendale, Nashville, Tenn.**

### SILVER WYANDOTTES

Winners at Chicago, St. Louis, Springfield and Kansas City, are in my pens. Eggs \$3 up. Stock reasonable. Write today. **August W. Schroeder, R. 1, St. Peter, Minn.**

### McCLAVE'S LINWOOD POULTRY FARM

The home of high class prize-winning Rocks, Wyandottes, Orpingtons, Leghorns, Turkeys, Ducks and Geese. Highest quality at reasonable prices. Write **Chas. McClave, Box A, New London, Ohio**

### "IF CHICKEN CHOWDER

"I won't make your hens lay, they must be roosters." Full particulars and 48-page Poultry Book free for the asking. **Purina Mills, 801 S. 8th St., St. Louis, Missouri.**

### Dr. Hess Poultry Pan-a-ce-a

Makes hens lay more eggs by strengthening digestive organs—helps chicks grow quickly—cures poultry ailments. A penny's worth feeds 30 fowl per day. Free Poultry Book for 2c stamp.

**DR. HESS & CLARK, Ashland, Ohio**

## BARRED ROCKS OF THE BETTER QUALITY

### EGGS : EGGS

Wherever our birds are shown they win—The Great Allentown Fair, Trenton Inter-State Fair, Williamsport and Philadelphia. Our eggs for hatching are of the highest standard and fertility.

### Our Mating List Is Now Ready

Eggs \$2.00 to \$5.00 for Our Best Matings

Choice high class breeding stock for sale. Cockerels \$5.00 up. Pullets \$3 up. Perfect in shape, color, and bred from winners. Buy from the farm that gives absolute satisfaction. Mention this paper when writing.

### EASTERN IDEAL FARM

**CHAS. F. ROSENOW, MANAGER**  
**NORRISTOWN : PENNSYLVANIA**

### Summer Poultry Exposition at Atlantic City, N. J.

THE April issue of The Poultry Item, announces the Second International Poultry Exposition on the Million Dollar Pier, Atlantic City, N. J., starting on July 4th and continuing until September 1st. The poultry world will no doubt be glad to have this information as the Exposition is primarily designed to create a wider interest in the poultry business. At no place on this continent are the opportunities as great to interest new people in the poultry business as at this well-known resort, where more people will view the exhibits than the combined attendance of all the poultry shows of the country.

That the general public does take an interest in poultry was proven at last year's event. Fowls shown in their natural conditions, down on the ground, in a pen containing 50 square feet, attractively decorated, attract and hold attention much better than a bird caged in a small coop. Last year's exhibits also proved that birds can be gotten in show condition and kept in perfect health in the summer months. The best recommendation the Exposition offers is the fact that those who showed last summer will be back this season, some of the exhibitors having already reserved double the space used last year. The country's leading breeders will take space to help stimulate interest among people who have never had an opportunity to see and learn of the magnitude of the poultry industry.

The strength of this year's Exposition will be its publicity features. The first object of the Exposition is to demonstrate that birds can be successfully shown in the summer time. The greater purpose, however, is to keep and maintain the enthusiasm of breeders and patrons, whose interest suffers a serious relapse during the summer months, over a longer period. While it is acknowledged that the millions of people who visit the pier are there largely for health and recreation, yet the business sense of the average American never is absolutely at rest, but simply lies dormant for the time being. Poultry has an attraction that appeals instantly to lovers of bird life. It stands to reason that a certain proportion of the visitors to the Pier, as many as 40,000 a day, will really become interested and get their first inspiration at this Exposition.

The Poultry Item believes in helping along a great industry and offers this feature as one way to promote it. It invites all others who see greater possibilities in the poultry business to co-operate and help boost in a legitimate way a great industry. Many new people will catch the "chicken fever" at the Million Dollar Pier and those who exhibit will have first call on their patronage. A prospectus giving full details will be mailed to anyone interested. The cost of exhibiting is nominal, sufficient only to pay cost of space, construction of pens, care, feed, etc. The exposition will be under the direct management of Charles T. Cornman, the editor of The Poultry Item.

Reese V. Hicks, president A. P. A.; S. T. Campbell, secretary; U. R. Fishel, J. C. Punderford, Lester Tompkins, E. B. Thompson, S. B. Twining and many other breeders who personally viewed the exposition last summer, endorsed it in unqualified terms.

## FOR THE VERY BEST

IN COLUMBIAN AND SILVER WYANDOTTES, ADDRESS

**J. F. VAN ALSTYNE, NIVERVILLE, NEW YORK**

**WHITING'S WHITE DIARRHOEA REMEDY**  
Guaranteed to cure and prevent White Diarrhoea in Baby Chicks, and make them grow bigger, stronger, quicker. A 50c bottle for 150 chicks. Order or write for free printed matter.

# DON'T KILL THE LAYING HEN

**T**HE HEN that lays is the hen that pays. Hundreds of thousands of hens are killed each year that are in full laying condition, while an equal number are kept in the flock that never have or never will lay an egg, or at best will lay only a very limited number. All this may be avoided if everybody would use the Potter System of telling the layers from the non-layers.

## Cull Out the Drones and Save on Feed

Why should the poultry breeder go on wasting feed by feeding a lot of hens that do not produce enough eggs in an entire year to pay for their feed for one week, when it can be avoided by learning the Potter method of telling to an absolute certainty just which hens are the producers and which are the drones in the flock?

If you know the Potter System you can reduce the size of your flock and save money on your feed bill, and at the same time secure just as many eggs at from one-third to one-half the cost. Is not this worth considering?

The Potter System is the only reliable system on this subject, and anyone can learn it in an hour's time, and we guarantee that anyone with a little practice can go among a flock of fowls and pick out the layers as rapidly as the birds can be handled. We have thousands of unsolicited testimonials from people who have purchased our book "Don't Kill the Laying Hen" and learned how to pick the layers and who consider the book worth many times the cost. Read what a few of them have to say:

## TESTIMONIALS

3095 W. 100th, Cleveland, Ohio.

Gentlemen:—Having received one of your books regarding the laying hen, I am pleased to say that it has done a great deal for me and would not part with it for many times what it cost if another could not be had. Yours truly, JOHN VAN SCHOAR.

304 Grand Allee, Quebec, Canada.

Gentlemen:—I received your book "Don't Kill the Laying Hen" some time ago. I am very much pleased with it and think it the best book I have ever read and would not be without it for any amount you would ask for it, and think every person that keeps fowls should have a copy. Yours truly, ED. ARCHER.

Wellsville, N. Y.

Gentlemen:—I received your book on "Don't Kill the Laying Hen." Will say that it is all you claim it to be and that it is no fraud. I went out to the hen house last night and tried the test. It worked to perfection. I predicted that a few hens would lay the next day, and sure enough some of them have laid. Very truly yours, WM. H. LEO.

Jutland, N. J.

Gentlemen:—Yours at hand and am glad that you have notified me of your new book of the system of selecting laying hens. Your old book has saved me many a dollar on feed bill, besides giving me more room for the layers. I would not be without this book for any money and am glad you have added more to it. Yours truly, M. V. TAYLOR.

977 Wilcox Ave., Chicago, Ill.

Gentlemen:—I must say your book "Don't Kill the Laying Hen" is valuable to any poultry keeper; it is worth its weight in gold and your system reliable in every way. I am more than pleased with it. I have told some of my friends about the system and they got the book and are pleased with it. Yours truly, JOHN MOYER.

Box 105, R. R. No. 1, Charlestown, Ind.

Gentlemen:—I am ashamed that I have allowed almost two years to pass without writing you how thoroughly I endorse and value your book "Don't Kill the Laying Hen." The only thing I don't like is I can't tell my poultry friends all it has taught me. I would not be without it for many times its cost. We frequently ship fifty or sixty hens and get as many eggs as before, showing we had not shipped laying hens. It saves me a trip to the poultry house at night to know which are broody hens. At feeding time I examine all hens on the nest and shut up the broody hens. Yours very truly, MRS. B. R. McCONNELL.

Deer Creek, Okla.

Gentlemen:—Your letter and circulars to hand and contents noted. Yes, the best I can do is to have the new book "Don't Kill Biddie." It has made me one hundred and ninety dollars and still making more, and only a few chickens, from 70 down to 44 now. I'm running two machines and selling enough to support me and living like Queen Victoria. Yours truly, G. W. NORMAC.

Tucson, Ariz.

Gentlemen:—Your book in regard to the laying hen received. It is well worth the price. Anyone owning a small flock of chickens ought to have one. Yours truly, J. A. GORDON.

614 Boos St., Harrisburg, Pa.

Gentlemen:—I received your book on "Don't Kill the Laying Hen" and must say it is all it is claimed to be and more. Yours truly, GEORGE J. GRIFFEE.

Lincoln, Kansas.

Gentlemen:—Your book "Don't Kill the Laying Hen" is just the thing for a poultryman. I don't see how I got along without it. I would not part with the knowledge gained from it. Yours truly, MRS. IDA MEIER.

# THE FOURTEENTH EDITION OF THE GREAT POTTER BOOK

is just off the press. Revised and improved to such an extent that it is now without question the greatest book of its kind ever published. This book contains 96 pages, (6½x9 inches) and 38 illustrations; printed on super-calendered paper, bound in two kinds of binding—paper and cloth. Will make a very valuable addition to any poultryman's library. In fact, no one who raises poultry, no matter how many or how few, can afford to be without a copy of this great book. The secret this book contains is worth many dollars to anyone.

More than 100,000 copies of this book have been sold during the past few years, which in itself is conclusive evidence of the value of this book. When ordering a copy of this book you must promise not to reveal the secret to anyone except the immediate members of your family. The secrets it contains cannot be obtained from any other source. Everyone who receives this book is pledged not to reveal them to others. Therefore, it is to your interest to obtain a copy of this book at once and become a member of Potter's great "secret" family, stop killing the laying hen, thereby greatly increasing your poultry profits.

The Potter System of telling the laying hen has stood the test of time. It has been advertised in these columns for the past eight years, and during that time thousands of copies of the book have been sold and thousands of poultrymen all over the country have been enabled to turn loss into profit and thousands more can do the same thing if they will take advantage of the following offer:

## How to Get the Great Potter System

Realizing the great importance of this system to all poultry breeders the American Poultry Journal Publishing Co. has secured the exclusive right to print and sell this great work, and the benefits to be derived from system will be given to American Poultry Journal subscribers only.

## OUR GREAT OFFER

In order to supply every poultry breeder with the great Potter System and the greatest poultry journal on earth, we have put the price within reach of all, as follows:

Don't Kill the Laying Hen (Paper Cover) } BOTH FOR  
American Poultry Journal, one year . . . } **\$1.30**

For the Cloth Bound Edition, \$1.50

## A History of Eight Non-Laying Bob-Tailed Hens and One That Was Not Bobbed

Including valuable scientific facts regarding molting. A supplement to "Don't Kill the Laying Hen." This supplement gives the story of One Hen that was not bobbed; the story of the first four non-laying bobtailed hens; the other four non-laying bobtails; how hens having red combs are deceiving; forced molting bad business; how the laying season may be extended and many more eggs obtained, or why hens having good laying organs stop laying early in the season, and much other valuable information which is worth far more to the average breeder than the small price we are asking.

If after a careful study and trial of the system you find that we have misrepresented this system in any particular, money will be cheerfully refunded. We have given this system a thorough investigation and know whereof we speak. If you are already a subscriber to A. P. J., we will extend your subscription one year from its present expiration. Send all orders to

# Correct Brooding and Proper Feeding of Chicks

**N**OW—today—is the *critical time* in your year's poultry work, Reader! *Raising the little chicks is the test*—raising them in *profitable numbers*; chicks that are healthy and lively, that will *grow rapidly*, that will make good layers or breeders, or that will bring *high prices* either as table poultry or as fancy fowls.

It is largely a question of *correct brooding* and *PROPER FEEDING*—of this there can be no doubt. We are often told that it is *easy enough* to hatch plenty of chickens, but that it is a *hard matter* to raise them. And this is so, *unless* you have the right kind of brooding equipment and feed the right kind of food *in the right way*.

Cyphers Company customers *know* this is true, and we want *every reader* of this advertisement to know it also. To help you with *your work*, Reader—to help you *win success*—we have gone to large expense in publishing

Cyphers Company's Latest New Free Book. Most Complete Treatise to Date on This Vitally Important Subject. Goes Into Every Detail From Time Chicks are Taken From Incubator Till They are Placed on Range. Book of 52 Pages, 7x10 Inches in Size, Well Illustrated. Mailed FREE on Request to Any Address.

## Two Free Booklets

treating solely on these *vitally important subjects*, and we shall be glad to mail either booklet or *both of them* to you, without obligation, *promptly on request*. Write today. A postal card will do, although we would be glad to get a letter telling us about your poultry plans. Maybe we can *help you out* with some information or advice. Write us freely on any poultry subject.

## Sample Reports from Customers

Please read the following letters from Cyphers Incubator Company customers whom we have helped to realize greater profits from *correct brooding* and *proper feeding*.

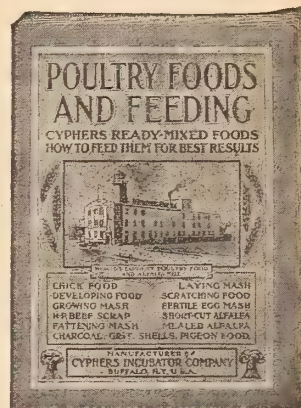

### "Always Sorry After Substituting"

R. F. D. No. 4, Vineland, N. J., July 28, 1912.

Cyphers Incubator Co., Buffalo, N. Y.

I am pleased to be able to report that I have been using your various Balanced-Ration Poultry Foods for *more than six years*. Have discontinued using all other makes for the reason that my results with your Foods have been *uniformly satisfactory*, and the chicks I have raised upon your foods have always turned out large, plump, well-developed and evenly-feathered birds. When I could get it, I have *always used your chick food* for my little chicks. At times I have had to substitute some other brand of food, and whenever I have done so I have been *sorry afterwards*. I have found more or less grit and other cheap materials in other makes of chick food that I have tried, whereas your foods contain *nothing but clean, pure wholesome grains*.

THE SCHOFF FARMS (Arno Schoff, Prop.)

This Book Would be Cheap at \$5.00 Per Copy. Judged by Actual, Detailed Value of Contents. Tells How to Produce Broilers, Fryers, Roasting Chickens and Capons; Also Exactly How to Feed the Layers and Breeders. 52 Pages, 7x10 Inches. One FREE COPY on Request to Any Address.

### "Maximum Results with Minimum of Labor"

North Abington, Mass., Oct. 30, 1912.

Cyphers Incubator Co., Buffalo, N. Y.

In January of this year I obtained 1,500 White Orpington Chicks. These chicks, as well as all of my other stock, were fed on your Cyphers Balanced-Ration Poultry Foods, according to "The Cyphers Way", and in return I succeeded in getting the *maximum results with the minimum of labor*. As an example of the weights I obtained by feeding your Balanced-Ration Food, I will state that chicks hatched June 12th averaged 2 3/4 pounds by August 20th, and I have pullets 14 weeks old that averaged 4 1/2 pounds; cockerels that average 7 1/2 pounds. Anyone who adopts Cyphers methods will require to make a big mistake of some sort, or meet with some accident, *not to obtain results that show handsome profits*.

MISS ANNA B. SANDERSON.

### "Good, Strong Fellows, Too"

Augusta, Mich., Nov. 6, 1912.

Cyphers Incubator Co., Buffalo, N. Y.

Year before last I gave your Sealed-Bag Brand Poultry Foods a *fair trial*, and now it is "Cyphers Foods exclusively for me." I hatched a bunch of 105 Barred Rock Chicks—good, strong fellows, too. I was then feeding the chick food that I bought of a milling company at \$2.00 per 100 pounds. *In eight days' time I had just 51 chicks left*. I got desperate, as they were choice chicks, ordered a bag of Cyphers Co. Chick Food from your Chicago Branch House by telephone, began feeding it at once, and *lost only seven chicks from that bunch afterward*. How much would that \$2.50 bag of food been worth to me at the start? For the balance of the season I used Cyphers Food exclusively and *had fine results*. I am a beginner, but have learned that Cyphers Foods are the *cheapest when results are counted*.

W. C. HODGES.

### "Seeing Is Believing"

Bancroft, Kans., April 12, 1912.

Cyphers Incubator Co., Buffalo, N. Y.

Two of my neighbors were *here this morning* to see my chicks and were so pleased with them that they wanted to know what I fed them. I told them I used Cyphers Balanced-Ration Foods and nothing else except a little steel-cut oatmeal, *Seeing is Believing*, so one woman borrowed my catalogue to order some of your foods and the other borrowed some of my Cyphers Chick Food till she could get some. *Our chicks sure look fine and are growing so fast* I enclose order for Cyphers Grit and Short-Cut Alfalfa.

MRS. W. A. HENRY.

### "Chick Loss Was Stopped"

York, Neb., Jan. 8, 1912.

Cyphers Incubator Co., Buffalo, N. Y.

Have used your Poultry Foods *exclusively* for the last *six years*. These foods are unsurpassed—especially the Chick and Developing Foods. Before that time I had used most any thing called "Chick Food" sold by local grocers and feed dealers, and they were called the best, of course, but I *continually lost chicks*, and it was not until I began using Cyphers Chick Food that I found out where the trouble was and the *chick loss* has stopped.

STROBEL ORCHARD FARM (Fred Strobel, Prop.)

### "Cockerels that Weigh 6 lbs. 1 oz. Each"

Greenwood Lake, N. Y., June 7, 1912.

Cyphers Incubator Co., Buffalo, N. Y.

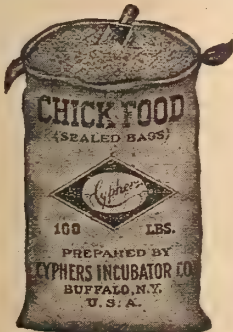

I have had the best kind of results from using your Sealed-Bag Brand Chick and Developing Foods, also your High-Protein Meat Scrap. I have found your foods to be *clean and free from waste and shrivelled or musty grains*. Have tried other brands but they do not nourish the chicks like the Cyphers. I have raised Barred Rock Cockerels *three months and one week old* that weigh 6 lbs. and 1 oz. each. These birds were fed on your Chick and Developing Foods, Fattening Mash and Meat Scrap.

This is a Medium-Granulated, Five-Grain Balanced Ration that we Advise Our Customers to Feed to Growing Chicks Between the Ages of Six to Twelve Weeks. Before They are Given Whole Grain.

## FAIRVIEW WHITE ROCKS.

Guy Daily reports that he has two hundred surplus yearling hens which he will dispose of at very reasonable and attractive prices. Here is a snap for some breeder of White Rocks.

The Fairview strain of White Rocks made a remarkable win at the late Chicago show, which added to their long list of first prizes won during the past has forced the public to recognize it as one of the prominent strains of the country.

Mr. Daily issues an instructive catalogue and is always glad to answer correspondence. Address Guy Daily, Jeffersonville, Ind. Mention American Poultry Journal when writing.

IDLEWOOD POULTRY FARM,  
SWANVILLE, PA.

The Idlewood Poultry Farm make a specialty of day-old chicks and have a capacity of 100,000 chicks. Therefore if you want S. C. Red, R. C. Red or White Orpington chicks here is the place to get them.

Mr. A. H. McElroy, proprietor of Idlewood Poultry Farm publishes a souvenir catalogue that is very artistic and does justice to the fine exhibition quality of the stock kept here. The illustrations of the plant are fine half-tones and show it to be a very beautiful, substantial and at the same time a very practical poultry plant, in fact a model poultry farm. Mr. McElroy has spared neither time nor

While B-K is non-poisonous and harmless to human life and animal life, a dilution of it sprayed once a month about the coops, on the roosts, in the nests, etc., will destroy all vermin with which it comes in contact and will prevent these parasites from getting a serious hold among your fowls.

It will also destroy instantly on contact all germs of contagious disease such as roup, cholera, diarrhoea, etc., that may be lurking in the hen house. A few drops of B-K placed in the drinking water once a day will destroy the germs that cause disease and effectively prevent loss from cholera, diarrhoea, etc.

To introduce B-K the General Purification Co. offer to send a free sample to any of our readers who will write to them and mention this paper.

## HOW TO REDUCE EXPENSES.

This should be an interesting subject to every poultryman for the reduction in expenses means just that much more profit. We believe every one is or should be interested in making his poultry business profitable.

Feed bills can be greatly reduced by using a good automatic poultry feeder, because no feed is wasted, and none is left lying around on the ground, because the fowls only operate it to get feed as they need it. In this way they get a little at a time and with litter on the floor they must exercise to get it. This aids digestion, stimulates and increases egg production and at the same

expense in building up a strain of birds which have successfully competed for the blue ribbons at some of our largest shows. Having thousands of birds he is prepared to supply almost any demand for either stock, eggs or day-old chicks. His catalogue is free; if interested in Rose or Single Comb Reds or White Orpingtons, write for it. Address Idlewood Farm, Swanville, Pa. Please mention American Poultry Journal when writing.

TIMELY ADVICE TO POULTRY  
KEEPERS.

The poultry keeper who expects to get the maximum profit from his fowls this summer will do well to give them a little special attention right now when they are first being turned out on range. They have been housed up more or less closely during the winter months and as a result both the fowls and their quarters have no doubt become infested with vermin. These will worry their victims—especially as the days get warmer and prevent their laying and thriving as they should unless you do something at once to get rid of these pests.

Germs of various kinds are also finding conditions favorable to propagation right now and destructive diseases may break out at any time unless you use some dependable preventive.

We know of nothing on the market more convenient, inexpensive and effective than B-K, a wonderful new discovery prepared by the General Purification Co., of Madison, Wis., and advertised by them on another page of this paper.

time the general health of the flock. Furthermore, because there is no feed left lying around, the sparrows, rats and mice are compelled to seek a new home, where they can get access to feed. This alone results in an enormous saving, more than most poultry men realize.

In addition to this a good feeder saves a great deal of time. It reduces the work of feeding to simply filling the hopper once a week, at the same time it feeds your birds better than you could for a hen knows when and how much feed she needs better than you do. With a good dependable automatic feeder you get the maximum results at the minimum expense. A good dependable feeder is a feed saver, a time saver, in fact a money making investment for any poultryman.

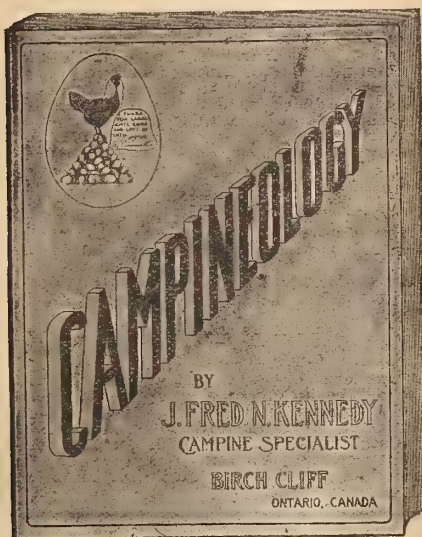

There has recently been placed on the market the most simple, most perfectly constructed and absolutely dependable automatic feeder yet invented. It is called the Simplicity Kant-Klog Poultry Feeder. It is all its name implies, for it is so simple a child could put it together and operate it. There is almost nothing to it, yet it works. In fact it is so constructed it can't fail to work for it simply can't clog. It has what no other feeder has, an agitator that stirs the grain right at the point of exit. By its unique construction, having a swinging deflector, it scatters the grain over twice as much floor space as any other feeder. The grain in falling is hit by the swinging deflector and knocked promiscuously in all directions, practically never twice in the same place.

This feeder is "simply perfect, perfectly simple," and is made in three sizes.

The small size holds one quart, stands twelve inches high and is called the baby chick size. It will feed your chicks from the time they are hatched. No more worry about feeding your chicks, simply fill the hopper of a Simplicity Kant-Klog Baby Chick Feeder and leave them to do the rest. You can go to work or away from home and forget you have chicks. When you return you find they have been well fed during your absence. The fowl sizes come in ten and twenty quarts. These feeders cost even less than others and they are more simple, can't clog, and more efficient as they scatter the feed farther. No poultryman can afford to be without these feeders for they will save you several times their small cost the first year and they last forever.

Send for free book, "What and How to Feed." This gives you valuable feeding formulas for Spring, Fall, Winter and Summer feeding, and also tells you why Simplicity Kant-Klog Poultry Feeders will save you many dollars during the year. Get a copy of this book today. Address Simplicity Supply House, Pontiac Bldg., Chicago, Ill.

The above is a reproduction of the cover page of the handsome catalogue issued by J. Fred N. Kennedy, Birch Cliff, Ont., Canada, the well known Campine breeder. Mr. Kennedy has spared neither time nor money in producing this catalogue which is printed in the most up-to-date manner and contains a handsome picture of Golden and Silver Campines in natural colors; but aside from this feature the book is full of information about the Campines and every one of our readers should have a copy. It is sent for 10 cents to pay postage.

#### THE CHICAGO HOPPER.

The Chicago Poultry Dry Mash Hopper, that has been advertised in our columns for several months, is made of all galvanized iron, which makes it practically indestructible. It is rat, sparrow and mouse proof, the poultry can't waste any feed or injure their combs or bills; it is open to the poultry at all times and closed to rats, sparrows and mice, day and night. When a fowl steps on platform a wire mesh door swings inwardly, when fowl steps off again there is a small weight that overbalances platform, which will close the door and lock same by a small bolt. Nothing can get to the food but a fowl large enough to overbalance the weight again. The weight can be adjusted to suit. It is the only dry feed hopper patented that is absolutely non waste, sparrow and mouse proof. Hopper feeding is the new way of feeding poultry, as it saves time and feed; it has been tried and proven good. All up-to-date poultrymen are taking up hopper feeding, but complain, saying there is no rat and sparrow proof hopper on the market.

The inventor of the Chicago Hopper, Mr. Geo. L. Poh, 2160 Lincoln Ave., Chicago, issues an illustrated folder that fully explains his hopper. Send him a postal card for one of these folders and say you saw his ad in American Poultry Journal.

Chicago, Ill., April 2, 1913.  
Buschmann-Pierce Red Farms, Carmel, Ind.

Gentlemen: We think you might be interested in our experience with the

utility hens and pullets we bought from you last Fall. We kept them in a Niemann Brothers' open front galvanized iron house all winter and have used leg bands and trap nests so that we were able to keep a complete record of each bird up to date. We have made a comparison, using the egg-laying record of six of our birds, and find on March 27th that these six birds exceeded the best record made at the Inter-Ocean Egg-laying Contest at Midlothian Farms, by sixty-four eggs. During this time that we have made up our record, three out of the six hens have been sitting an average of ten days each. For people who have had no previous experience but journals we think we are fair when we assume that our record is largely due to the superior egg-laying strain of the birds you furnish to us, plus the care we have been

able to give them. If the young chicks which we are trying to hatch equal the record of their mothers, we feel sure we will have two dozen good layers to provide us with eggs next winter.

Very truly yours,

(Signed) Frank F. Holmes.  
Mr. Holmes is of Frank F. Holmes & Co., Fire Insurance, 175 Jackson Boulevard, Chicago, Ill.

Mr. Robt. T. Brown, R. F. D. No. 4, Springfield, Ill., has been breeding birds that win the blue at some of our large shows for a number of years. This year his pens contain some particularly fine birds, including winners at Chicago, Springfield, Alton and other shows. His mating list gives full information, also prices, which are very reasonable. Mention A. P. J. when writing.

### WARD'S CHAMPION DARK CORNISH PULLETS and YEARLING HENS

**For Sale** On account of having booked passage for first week in August to England for Cornish, I have some 25 or 30 high grade Cornish females for immediate disposal, at attractive prices.

**O. K. POULTRY LITTER A TREMENDOUS LABOR SAVER.**

The perfecting of the incubator made poultry raising one of the most profitable of industries, placing it on as well defined a basis as far as expenditures and results go as any other branch of farming or manufacturing.

The next greatest help in the business is "O. K." Poultry Litter. There is nothing else like it. In the first place it is a better litter for brooders and houses of all sorts than any other litter material for every reason you can think of. It keeps the houses dry, clean-smelling and thoroughly sanitary.

Then its original cost is no greater than the average poultryman has to pay for other litters.

Above all, it is such a labor saver, such a convenience. It has the property of drying up the droppings, so that one lot lasts in a brooder until the chicks have outgrown the brooder entirely. In houses and pens of all descriptions two or three cleanings out in a year are all that are necessary. "O. K." Litter is a natural product, not medicated or "chemicalized" in any way.

The importers, the O. K. Company, 157 Water Street, New York, mail a sample free to any one who writes, and we suggest it's well worth your while to write for it. The big breeders are using "O. K." in preference to anything else.

**AN EASY WAY TO GET RID OF LICE.**

When Prof. Lambert of the Rhode Island Agricultural College began his experiments to find a dependable method of destroying poultry lice he undertook a work that has meant a great deal to all poultry keepers. It has been nearly 30 years since he succeeded in finding the best weapon for destroying these pests, and now there is hardly a poultry man in America who has not used or heard of Dr. Lambert's "Death-to-Lice."

It is the old reliable stand-by that never fails and does not injure hens, eggs, chicks or soil plumage. The preparation is put up in various size packages, selling for as low as 10c and up to \$1.00. Surely no poultryman can afford to put

up with these profit-eating pests when they can be cleaned out so completely and easily by this splendid preparation.

Dr. Lambert's "Death-to-Lice" is sold by most dealers, but if yours does not carry it you can obtain it direct from the O. K. Stock Food Co., 501 Traders' Bldg., Chicago, Ill. The advertisement of this company appears on another page.

Vierheller Bros., 17 Sylvania avenue, Pittsburgh, Pa., the well known breeders of Buff Plymouth Rocks, are offering eggs for hatching from their noted prize-winners at \$10 and \$15 per setting. Those deserving something extra good should get in communication with them at once.

**BARNES KNOWS HOW.**

A recent letter from Charles E. Barnes, of Taylorville, Ill., who breeds the champion strain of Buff P. Rocks, says:

"At the late National Buff Rock Club Show, held with the Illinois State Show, at Springfield, Jan. 6-11, last, with 243 Buff Rocks in competition, I won 5 ribbons, on 5 entries, winning the much coveted National ribbon for best colored male, with 81 males competing. I also may say I have raised my chicks on Chamberlain's Perfect Chick Feed for the past 10 years."

Yours truly,  
CHARLES E. BARNES,  
Taylorville, Ill.

**BELLA VISTA FARM.**

The Bella Vista Farm is one of the best equipped farms in the country, located at West Kimmswick, Mo., near St. Louis, on the Frisco Railroad.

This plant is arranged after the Corning system. It consists of two laying houses, each 80 feet long by 16 feet deep; the lower or ground floor is 6 feet high, the upper floor same dimensions. These houses are very modern and substantially built. The brooder house is 104 feet long by 16 feet deep, with all the modern conveniences for taking care of chicks. They have also 20 outdoor colony houses for young stock after they leave the brooder house.

Anyone contemplating going into the poultry business should visit this up-to-date plant. The price of eggs has been reduced from last year's prices, viz: \$2.00 per 15, \$5.00 per 50, either by express or parcel

post, charges prepaid. They can also furnish eggs by the hundred or thousand at greatly reduced rates. Day-old chicks are offered at \$15.00 per hundred. Send for free circular. Address Bella Vista Farm Co., Kimmswick, Mo., and mention American Poultry Journal.

**SILVER WYANDOTTES, PAST AND PRESENT.**

Mr. Henry Steinmesch, an international authority on Silver Wyandottes, has issued a folder describing the progress of this breed from 1889 to 1903. This folder should be in the hands of all breeders of Silver Wyandottes. It is very interesting, profusely illustrated with half-tones on high class glazed paper. It is free. Address Henry Steinmesch, 220 Market St., St. Louis, Mo.

**LICENE KILLS THE LICE.**

When other lice-killers fail, try Licene; it does the work every time. Send to the Licene Co., Pontiac Bldg., Chicago, Ill., 50c and they will send you enough Licene for 200 birds. Read these testimonials:

Bartlett, Tenn., 2-15-1913.  
Gentlemen: In Licene I believe you have found the ultimate in lice eradicators. It does the work thoroughly and effectively, while having the good feature of not discoloring the plumage. Enclosed find money order for which send another shipment. Very truly yours,

Martin F. Schultes,  
Troutdale, Oreg., 4-8-13.

Sirs: Please forward me 50c box of your Licene at once. I have tried all the lice killing powders there is but have never found anything that would clean the chickens of lice like your preparation. It doesn't move only "a few" of them but it gets them "all."

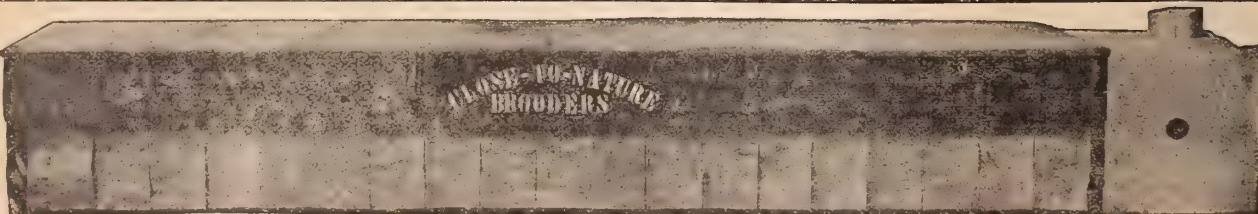

Yours respectfully,  
Perry Hale.

Readers of American Poultry Journal who live in Europe and are interested in Peerless R. I. Whites should write to Miss C. A. Reid Powell, St. Ives, Ringwood, England, who will furnish them with catalogues and prices, she being English agent for Carl D. McCarthy, Kempton, Ind.

**THE MOST POPULAR FOWL today is U. R. Fishel's White Ply. Rocks****Barred Plymouth Rocks**

The "Hoosier Strain" Barred Plymouth Rocks scored another sweeping victory at the Big Cincinnati, Ohio, show Jan. 23-29, 1913, winning best display, five silver cups, gold special for champion male, etc. We had twice as many points for best display as any competitor. This phenomenal winning added to our record of first cock at Chicago, Dec. 1911, second and third cocks and fifth pullet mated pen Chicago, Dec., 1912, five first and four second prizes at Indianapolis in 1912, is final proof that there is no better strain. **Eggs for Hatching:** Our pens are the best we ever mated and contain more National Show winners than the same number of pens owned by any other breeder in America and will produce the winners for next season's big shows. Prices for Eggs, \$1.50, \$5 and \$10 for 15. A few choice breeding birds for sale. Send for mating list.

**G. Earl Hoover :: Route 24 :: Matthews, Indiana**

**Close-to-Nature Open-Air Hovers--The Longest Portable Hover Ever Made**

Applies the three Close-To-Nature principles of contact warmth, open-air ventilation and no piling or overcrowding.

A most remarkable and modern hover. Warm air induction heater combines the fireless idea with the lamp--use the lamp for very young chicks, but discard it as they grow older; or use the lamp during day time when chicks are running out, but extinguish it when they cluster for the night.

Of all the well known Close-To-Nature brooders, this new 1913 hover is the climax. Unreasonably low prices this season.

No. 200, 67 inches long, 200 to 250 chicks, \$8; two for \$15. No. 100, 37 inches long, 100 to 125 chicks, \$5.75; two for \$10. Can ship at once. Send for circular.

If you need hovers at once, order from this advertisement. If not satisfactory, ship them back and your money will be returned and no questions asked. It is up to you. Mention American Poultry Journal when writing.

**CLOSE-TO-NATURE COMPANY -- 38 FRONT STREET -- COLFAX, IOWA**

## CATALOGUES AND MATING LISTS FOR 1913.

The catalogue of the Sunswick Poultry Farm, S. Plainfield, N. J., has been received. It shows "class," the same as the stock raised on this farm. They recognize the value of good printing and insist upon it in their catalogue and stationery. The Sunswick is the great S. C. Buff Orpington specialty plant of America. The new catalogue contains photos of many of their prize-winners, a bird's-eye view of the farm and other scenes; gives prices of eggs, baby chicks, etc. It is well worth sending for.

F. A. Kaup, Chicago, Ill., the Buff Orpington specialist, has issued a very handsome 32-page and cover catalogue. Cover in two colors and embossed. This catalogue contains many very fine halftone illustrations by that well known poultry artist, Louis A. Stahmer. This catalogue contains a complete list of the many prizes won during the past two years, a full description of his matings for this season, prices of eggs and baby chicks, testimonials from satisfied customers and other information. Send for a copy today and mention American Poultry Journal.

A very handsome and up-to-date catalogue is the one gotten up by Monmouth Farms, Freneau, N. J., breeders of the Monmouth strain of Single Comb Buff and White Leghorns. This catalogue has a frontispiece, a beautiful colored plate of trio of Single Comb Buff Leghorns by Shilling. It also contains many fine photos of prize winning birds and scenes on the farm. It is well printed, on heavy enamel paper and gives full description of matings for this season. A copy will be sent on request.

W. J. Gower, Jr., 405 Ridge Ave., Canonsburg, Pa., has sent us a copy of his mating list, which gives list of his winnings and description of his S. C. White Leghorn matings for this season.

The Wopsy Poultry Yards, J. W. Parks, Prop., Altoona, Pa., gets out a very attractive catalogue on bred-to-lay Barred Plymouth Rocks. This catalogue is full of value hints to breeders and is well worth sending for.

F. S. Bullington, Richmond, Va., the well known Orpington specialist, has issued his 1913 mating list, which gives full description of his nine breeding pens, and other information of interest to White Orpington breeders.

"Modern Portable Poultry Houses" is the title of a booklet put out by the Dyer Portable House & Mfg. Co., 4433 North Fortieth Ave., Chicago, Ill. This firm manufactures all styles of portable poultry houses. Their booklet is interesting and free for the asking.

Mrs. J. H. Harnly, Zion City, Ill., has favored us with a copy of her 1913 mating list. This contains a complete description of her 16 pens of White Orpingtons and full list of prizes won. Send for a copy and mention American Poultry Journal.

Simmons & Crittenden, Geneva, Ohio, the Rose Comb Rhode Island Red specialists, have eight pens mated this season. Their mating list is sent free.

Cloverdale Poultry Farm, Ransomville, N. Y., is sending out a very neat little booklet containing 12 pages and cover, which gives descriptions of the eight varieties of poultry they breed. They are making a specialty of baby chicks and ducklings.

Geo. W. Little, 700 Washington St., South Braintree, Mass., is sending out a very neat mating list of his Rose Comb R. I. Reds.

Parsons Poultry Plant, Avon Lake, Ohio, breeders of S. C. White Orpingtons and R. C. Reds have a very attractive mating list this season. It will be sent free on application.

One of the handsomest catalogues that has come to our desk this season is that put out by D. E. Ault, proprietor of Silver-side Poultry Yards, Ft. Wayne, Ind. Mr. Ault has not spared expense in getting up this catalogue, and it contains many fine halftone illustrations of Silver, Golden, White Crested Black and White Polish. He also has a very neat 4-page mating list.

We have received a copy of the 1913 mating list of the Sandy Lick Poultry Farm, 966 Liberty Ave., Pittsburg, Pa., breeders of Buff, White and Black Orpingtons. These people guarantee satisfaction.

The Regal White Wyandotte catalogue and mating list for 1913, is gotten up in the usual up-to-date manner, and besides giving full description of this season's matings contains much other useful information. Send for a copy to John S. Martin, Port Dover, Ont., Canada, and mention American Poultry Journal.

A copy of a descriptive circular and price list of the Elgin Improved Floor-Level Portable Hover has been received. This hover is manufactured by the Elgin Poultry Supply Company, Elgin, Ill.

Payne Brothers, Portland, Conn., breeders of Rose Comb R. I. Reds, have gotten out a very neat mating list for this season, a copy of which will be mailed to all who ask for it.

Miss H. E. Hooker, South Hadley, Mass., the well known breeder of Buff and Blue Orpingtons, has favored us with a copy of

their celebrated Buff Orpingtons, of 25 pens and two special matings. Send for a copy and mention American Poultry Journal.

R. C. Caldwell, Lyndon, Ross Co., Ohio, the baby chick specialist, has gotten out a very handsome 24-page and cover catalogue, which describes his stock, gives prices, etc. Send for a copy and mention American Poultry Journal.

Hugh A. Rose, Fonthill, Ont., Canada, the Black Orpington specialist, has favored us with a copy of his 1913 mating list, which he is sending to all who are interested in this grand variety.

The most attractive and up-to-date mating list that has appeared this season is that gotten up by F. N. Perkins, Freeport, Ill., the Partridge Plymouth Rock specialist. This is printed in two colors throughout and cover is printed in gold and embossed.

her 1913 mating list, which is one of the most attractive mating lists that has come to our attention this season. Better send for a copy.

The Longfield Poultry Farm, Bluffton, Ind., has gotten out a very nicely illustrated mating list this season, which describes and illustrates their Rose Comb Rhode Island Reds.

Dunrobin Farm, Red Bank, N. J., breeders, exporters and importers of poultry, ducks and dogs, have sent us a copy of their new catalogue, which is gotten up in a very attractive manner.

The 1913 mating list of the Fluffy Ruffles strain of Barred Plymouth Rocks has reached us direct from C. H. Welles, Stratford, Conn., the originator of this great strain. Send for one and mention American Poultry Journal.

Roseland Poultry Farm, South Euclid, Ohio, has issued their 1913 mating list on

It also contains a handsome colored plate of pair of Partridge Rocks in natural colors. Send for a copy. It is worth having.

A very handsome catalogue is that issued by Rocky Run Farm, Northfield, Ohio. This contains 36 pages and cover; printed on heavy enamel paper; beautifully illustrated. The cover is printed in green, gold and embossed. The whole book is a work of art from beginning to end. It fully describes this great farm and "Evergold" Buff Wyandottes.

"From the Shell to the Show-Room," is the title of a 32-page booklet that is published by the Aldrich Poultry Farm, Columbus, Ohio. It gives hints on hatching, feeding and watering, mating, conditioning, etc. Would advise our readers to secure a copy.

C. A. Keefer, Muskegon, Mich., the Buff and White Orpington specialist, has issued quite an elaborate mating list this spring, which gives description of his matings, prices of eggs, etc.

**IDLEWOOD POULTRY FARM :: :: Swanville, Pa.**

The Ridge Egg Farm, West Nyack, N. Y., breeders of the Rockland strain of Silver Campines and S. C. White Leghorns, have gotten up a very attractive catalogue which they are desirous of placing in the hands of those who are interested in these varieties.

John L. Brown, 2337 Brown St., Anderson, Ind., breeder of the Giant strain of S. C. Black Minorcas, has a very neat little catalogue that he will send free to all who ask for it.

E. C. Young Box Co., Randolph, Mass., manufacturers of portable poultry houses, oat sprouters, shipping coops, feed hoppers, yard gates, nests, etc., have a catalogue that fully describes all these articles. Send for one and mention American Poultry Journal.

The 1913 mating list of C. J. Loyd & Son, Greensburg, Ind., has been received. This firm specializes in Partridge Plymouth Rocks.

A. E. Wohlert, Narberth, Pa., who makes a specialty of Single Comb Anconas, has gotten out a very tasty booklet describing his matings for this season. Send for one and mention American Poultry Journal.

Carl D. McCarthy, Kempton, Ind., the well known Rhode Island White breeder, issues a very attractive catalogue describing his farm and stock. Send for one.

The Fairview White Rock mating list for 1913 is up to its usual standard and fully describes the 18 grand matings; also gives list of winnings, prices, etc. Send for a copy to Guy Daily, Jeffersonville, Ind.

F. S. Smith, Hamilton, Ohio, the Single Comb Buff Leghorn specialist, has issued a large mating list this season which gives full descriptions of his 44 breeding pens and much other information.

**WILLIAM COOK AND SONS,  
SCOTCH PLAINS, N. J.**

This twenty-fourth day of March was our first visit to the home and poultry plant of Wm. Cook and Sons, the Mecca of all the Orpington fanciers the world over, for wherever the Orpingtons are known and bred the name of Wm. Cook and Sons is also favorably known. They coincide, one with the other. For year the Messrs. Cook and the poultry writers have told us the history of this variety, the aims of the originator and the progress made with the general favor in which the Orpingtons from the first have been received. But when Mr. P. A. Cook landed us at his home and gave us our first view of the great plant that his business success has made necessary, I felt that not the half had been told, particularly of this, the originator's home plant.

They say it is not proper to write of living persons, but in Mr. P. A. Cook we have a subject of character and ability, proficient and progressive, a man who does things, that we hope to be pardoned for the personal reference we may wish to make in this article. Here is a poultry plant of nearly 200 acres of land in a section of value as well as one of natural beauty, with very nearly "five acres" of cooped floor space. Think of this, consider upwards of 210,000 square feet under roof and devoted to but the breed of all the Orpingtons, and this the work of but one man. Account for it, reader, as you will. I claim it the positive proof of deserved success.

Mr. P. A. Cook has but the one business, the breeding and exhibiting of Orpingtons; he has hobbies in animals and birds, in trees, shrubs and flowers, and we were delighted with the wide range of thought and likes found in him. He has built his "Home Beautiful," surrounding it with the choicest of flowers, shrubs and ornamental trees known; here are the Japanese and Australian fir-trees and a thousand flowering shrubs. Rose gardens and the pathways edged by Privet and English box-wood. All is in harmony beautiful.

As you enter the dooryard, to the left is the aerie, with a large and rare collection of wild and ornamental birds, with fountain and the shady nooks that serve the natural home likes and conditions that the forests offer. To the rear the cinnamon bear from B. C., and near him the black Japanese bear, the finest specimen of bear we have ever seen. Then there are inclosed ponds for fancy water-fowls, also a large coop devoted to a magnificent American eagle, while high up above all floats "Old Glory" in peace and freedom. Entering the house you can well imagine yourself in the jungles of Africa, for here are live birds and mounted animals, even to the tiger, with the cooing bleeding-heart dove, the prettiest

of all. Mr. Cook is one of the broad-gauge kind of men whose nature has abundance of love for all things that live and grow.

The "Cook Orpings" to myself and to the reader as well probably should receive first consideration here, and with Mr. Cook we spent the greater part of the day in looking through and over his mammoth plant. From pen to pen, and from house to house we went, seeing in each something of special interest and with every step taken an increased admiration for this line of Orpingtons. The Whites are white, the Buffs are buff, the Blacks are black and this stock mammoth in size and numbers formed a collection bound to impress one with its worth. All varieties are bred here.

#### S. C. WHITE ORPINGTONS.

We could write pages, and still fail to do justice to this line and the records it has made in the prominent shows of this and other countries, but we must be brief and will refer to but a few of their thirteen thousand winners and the features as noted.

In the S. C. Whites were seen almost innumerable pens, each headed by a winning cock or cockerel mated to winning females and others of same quality and with the best possible breeding. The first and second St. Louis cockerels are mated here, the first a son of their M. S. Garden, N. Y., first prize winner. First St. Louis cock, first Trenton cockerel, first Birmingham cock, first Louisville cock, first and second Savannah cockerels, first Memphis cockerel, first and second Atlanta cockerels and other winners, all mated with the skill of the originator and of a quality in color, form and carriage that warrants the honors they have won. Combs and eyes average very good and were strong features. Here we seen a White male 18 months old weighing 14 pounds, still not bulky nor coarse, an ideal in form and a beauty head. To win at those shows means a strong all around bird, one that is good in all sections and is carried right, and here we can well say that their record well tells their general quality, both individually and collectively they have the quality that insures success to the breeder. Vigor and stamina with general and most excellent condition insures the quality and laying ability shown by this line.

#### S. C. BLACK ORPINGTONS.

We are not surprised that these are one of Mr. Cook's favorite and best, their extreme beauty is sure to attract for no matter where they are, in show or breeding pen or on the lawn, their style and character places them in the admirable class, and with their practical quality endears them to all who love beauty and worth combined.

These matings were headed by first cock, first and second cockerels, St. Louis; also first pen male, first Palace, N. Y., cockerel, first Memphis cock and first pen male and several others, all with records as long as the history of the variety. Much of our time was spent in seeing these matings and learning their records from Mr. Cook. The females were a very even lot, and in the same condition found in the Whites and others. We regret that time and space forbids individual mention of every pen seen. They are the "Cook" quality all through.

#### S. C. BUFF ORPINGTONS.

In the Buff Mr. Cook's stock is very large. This variety has been one of the leaders always, for their color meeting with general approval. A sound, clear buff color is very attractive, and the Orpington breeders have surely made great strides in perfecting this color, which at its present quality is sure to keep this variety to the front.

In one of the first pens seen was found headed by their first prize M. S. Garden, N. Y., 1913 cockerel, one of those rich and rare kind that must be seen to be fully appreciated. His color is of the very best, even and sound from tip to tip, both surface and under. Extra head and a wonderful tail in form and finish as well as in color. Next and close up to him in quality was the first Allentown pen male, followed by first and second St. Louis males, first pen male, first Trenton cockerel, first and second Birmingham cockerels, first Savannah cock, first Louisville cockerel, first and second Atlanta cockerels and a line of winners at several other shows, completing a class of merit and of value. The females mated were all we could wish for; size very good, typical form and a rich, even sound color in all, a beauty lot. To see these in the height of the breeding season, in condition and well carried pleased us.

#### BLUE ORPINGTONS.

Here are bred all varieties of Orpingtons. Their line is complete and in variety as well as in quality of each. Blue Orpingtons are the latest variety and here were several pens mated showing very nice form and

size and rich color. The blue color seems to particularly fit the Orpingtons and we believe they will prove one of the most popular, for they are breeding true to color and make a very attractive bird.

We regret that at this time we haven't a complete list of their winnings to quote from, particularly those made at M. S. Garden, New York, during the past ten years. This would be interesting, indeed, for it would better convey to the reader just what this line has done. It has been exhibited from coast to coast and north and south alike, and among the 13,000 or more prizes they have won are many of particular value and interest. Orpingtons are one of the best and most popular varieties. At the shows they are found in large and leading classes with competition strong and honors can only be won by birds of merit and value. These conditions add to the value of awards and when we consider what this firm has won, we can well say it is a phenomenal record and they richly deserve every success.

Their plant is very complete. The new incubator cellar is light and airy, with a 9-foot ceiling, assuring perfect ventilation. The show room is being fitted according to Mr. Cook's own ideas. There are no cages or coops over one another, which as shown by Mr. Cook is an advantage in the housing and conditioning of birds. No item, no matter how small, escapes his notice, and his mind is ever working out valuable improvements.

The buildings are not fancy but practical; light, roomy and clean. His large new house (a picture of which we hope to show with this) we say unhesitatingly is a model and the most practical we have seen. It is about 20x300 feet, seven and one-half feet high in front and four in the rear. An aisle 3½ feet wide runs along the entire front, which is of the open order, being boarded up 2½ feet, a 3 foot wide frame covered with cloth comes next, then another of 2 feet in width; either, any or all frames can be removed as desired. In front the roof of the house extends outward and slightly downward in shed fashion as a protector. The pens are all 10x16½ feet; from the rear they are tight-boarded, so no draft can possibly hit their roosting place. No dropping boards are used, but in front of the perches a foot board runs across and under the perches the O-K litter is used. Our first impression of this house was favorable, but after passing through it and noting the general condition of the birds, hearing them sing and seeing them crowd the nests, we were completely won to this style of house.

Along the roadway with runs extending to the highway are other long houses; the runs have iron posts set in cement and are topped with a ball, giving to all a finished appearance. Over to the left and covering several 10-acre fields are the colony houses for the growing stock and in the rear the long lines of brood and chick coops. The brooder house is near the incubator cellar and also near it the long cockerel house where extra males are kept. The feed house, work-house and wash house are connecting for convenience and above are the conditioning pens. You can walk over a mile here all under roof used for poultry. Mr. Cook told us his feed bill last year amounted to nearly \$7,000.00. There is running water over the entire plant.

Visitors take advantage of the welcome extended here, they were there in goodly numbers when we were, and over 5,000 have been there in one day. Mr. Cook has improved the road from both Scotch Plains and Westfield to his home and all over his 200 acres of land, making it a place of interest well worth seeing.

Mr. Cook's fondness for his Orpingtons is first only to his love of nature, his home, flowers and shrubs, in these we found him equally well posted. We had roamed over the place admiringly and finally went up the arbor hill to the rear and east of the house for a general view of the entire plant. From there its real size could be appreciated best, as well as its beauty. To the north the Blue Ridge Mountains, like a protector, reach high and in a sweeping circle bound the farm and turn off the chill from the valley below and insuring a temperate climate that is both early and late. Tranquil and serene was the place, with the air filled with fragrance of budding trees and the first early flower hidden in the protected nooks. The crow of the lusty cocks was like music, a part of all. What a picture all did make, for the chickens, in their glorious colors of white, black, buff and blue, were a necessary part of it all. Here is the evidence of poultry success. Poultry has made all this possible and what a satisfaction it all must be to Mr. P. A. Cook. To him and to him alone all credit is due. He has shown the way for others to follow. He deserves the reputation he has made and sustained. He deserves the great and rich line of stock he has bred and he richly

deserves his beauty home, and we hope he may long enjoy it.—H. P. Schwab.

### SUNNYBROOK FARM, EATON-TOWN, N. J.

Situated in a desirable and a most attractive location, Sunnybrook Farm compares most favorably with all the great plants we have seen. Its advantage is in its ideal location, its temperate climate and its wonderful natural beauty. Just how beauty can be of advantage may trouble some to understand, but in it we can see many advantages to be desired, the least of which is the zest that fills the heart of every man from owner to helper to work successfully with the grandeur of nature all around to invigorate and keep mind and body always at its best.

A balmy March air scented with perfume of budding trees and shrubs. The lilac leafing and in every nook and protected place the daffodils, crocus and hyacinth bulbs poking their spurs up in bloom and fragrance, and the violet in all its beauty and richness sharing a good portion of admiration. The maples and birches along the drive, and the elms and evergreens around the house and buildings, all are in place and a part of that which makes this a home, the heart's desire.

We went then to visit Mr. Cleveland and to see his stock and plant and tell our readers of them, for about everybody knows this man and is interested in his work. For years he has been a leader in the ranks, a prominent official and worker in the American Poultry Association, a leading poultry judge and a writer of unusual ability, and now also he is the secretary and manager of the New York Poultry and Pigeon Association, the great Madison Square Garden New York Show.

Sunnybrook Farm comprises 130 acres of land, all of which is devoted to poultry, fruit and some general farming. The lay of the land is just rolling enough to insure proper drainage, all sloping to the brook from which the farm derives its name. While fruit is a feature here among the crops, there are several large meadows with clumps of ornamental evergreens and colony houses where the young are grown. The range is large and conditions of the best.

The poultry houses are modern and of the fresh air sort, well built and with large parks for the breeding birds. The incubator cellar is light and airy, with high ceiling, and the brooder house in arrangement and finish is of the best we have ever seen. The ventilating system is one to assure success. The brood coops for hens with chicks are made on Mr. Cleveland's own plan. They are about 2½ feet front, 4 feet deep and 3½ or 4 feet high in front. This size is particularly well adapted to this purpose. We like the height as it insures plenty of air space. Also in fall, winter and spring they are used for male birds, affording grand quarters.

This farm is devoted to White and Columbian Wyandottes and it is as a breeder and exhibitor of these that Mr. Cleveland is probably best known to many. For years he has bred and shown his stock at our greatest shows, making a record that has placed him firmly along with our best breeders of the day. The winnings of his birds has brought fame to the "Sunnybrook" line, and the visitor here can well see in a large flock a general evenness of high and rare quality in both his varieties.

Here we see one of Mr. Cleveland's original White Wyandotte males, a cock six years old last spring (seven years now), that headed a pen with a 65 per cent average fertility, vigor and stamina are back of that record, and in fact we thought those qualities were a feature of this whole line.

#### WHITE WYANDOTTES.

Of White Wyandottes we noted several pens, grandly mated, Mr. Cleveland selected for quality and worth and not for numbers, the pens having from five to eight females with quality and line breeding in all. Heading a selected pen was the first cockerel of last year at Camden. He also won the gold medal for best cockerel at show; a fine broad full breast, grand back, full and well spread and carried tail. His mates are ideal typical birds; color extra. Next a pen headed by a cockerel who now is at his best; a fine head and a very rich bird in every way. A beauty cock was lording it over the next pen; ideal front and rear, extra back and tail. From pen to pen it was the same story in all. Such matings assure results, for they not only have the desired type and carry well, but they are sound in color and with most every bird used having a show record.

We were glad to note the combs and eyes of these birds and also their industry. They were a busy lot, with health and vigor a pronounced feature. We must heartily

## CANADA'S WHITE ROCK FARMS

## RICH'S ROSE COMB REDS

Bargains in Eggs, Baby Chicks and Breeding Stock

I have 18 pens of America's best breeding yards of Rose Comb Reds mated for the EGG trade this season. These pens are correctly bred to produce the very highest quality. Drop me a postal for my 1913 Mating List and large illustrated catalogue. It's free to Am. Poultry Jour. readers. A square deal is assured you.

D. W. RICH : 513 Vine Street : MT. PLEASANT, IOWA

## 1913 Rhode Island Reds

At Philadelphia, Cleveland and Pittsburg our Reds won thirteen firsts out of a possible fifteen. A record unbeatable.

Our Cockerel was champion bird at all three shows. A victory unprecedented in the history of Rhode Island Reds. This proves the quality our Reds possess. They are red to the skin. Send for free illustrated mating list, describing five of the best matings of Reds in the country.

Schenley Heights Poultry Farm 1202 Commonwealth Bldg., Pittsburg, Pa.

## CAMPINES

During May and June, the banner months for hatching eggs from this breed, I will offer eggs from all our pens as they run, in Silver and Goldens, at a 25 per cent reduction from catalog price. This will be a rare opportunity to secure eggs from winners at both Cleveland shows. I will also offer for July delivery my breeding pens, consisting of over 200 birds. I am prepared to quote amazingly low prices on single birds—pens or in larger quantities. If in the market don't fail to write for catalogue and prices.

In LEGHORNS I have a few open dates for May, and am offering chicks at \$10.00 per hundred after May 15

S. D. Hall : Box 78 : Seville, Ohio

recommend these particular features. They stand for success with poultry, and no man appreciates this more than does Mr. Cleveland.

#### COLUMBIAN WYANDOTTES.

Mr. Cleveland is particularly fond of Columbian Wyandottes and the record he has made with them assures us that he knows and understands them. If memory serves us rightly, he was one of the first to breed this variety. Years ago when we first met him he was their champion and today, seeing his birds again, we can well say he is still their champion and leader, for one can only succeed and breed the quality he has with a particular fondness back of it.

In the first pen seen was a cockerel of quality with extra head and a beauty neck, a well balanced bird in form and finely carried. In this pen was also seen the first New York hen; she also won the shape and color specials and special for best Columbian Wyandotte in the show. She was all we could desire in rich and rare quality. Another, a pen mate, won third at New York.

The next pen headed by first Atlanta cockerel; style and shape beautiful, tall and tail coverts as good as ever seen. Mates select and well chosen; wings extra fine. The third Atlanta cockerel, one of extreme beauty in hackle, extra fine shaped back and choice tail well spread. Among his mates are the first New York pullet and others of worth, all with the best possible blood.

The cock heading the next pen, while never shown, has proven to be a breeder of the highest quality and type. From one setting of this pen's eggs ten chicks were hatched that won at Trenton first cockerel, first and second pullet, first pen, cockerel and two pullets shown in the first pen, a total of six prominent winners from ten chicks hatched. He also is the sire of first New York pullet, 1, 3, 4, 5 Atlanta pullets, 1, 4, 5 cockerels and first pen complete at Atlanta, first pen at Passaic, N. J., etc. As mated this year Mr. Cleveland feels assured of greater results, if that is possible. His mates include first New York pullet of two years ago, second New York pullet last year, a winning hen of last year and two of his own pullets. This cock has what I believe is the best wing I have seen on a male bird.

Like the White the Columbians were a choice collection and in the best of condition. They are a line that commend themselves. Mr. Cleveland makes a specialty of selling choice exhibition and breeding stock. Eggs for hatching and baby chicks. He has converted himself from a busy city man to a poultryman and a farmer; in other words, from being one of New York's leading lawyers to the quiet and natural attractive life in the country, devoting his personal attention to the breeding of "Better Poultry," with the industry the gainer and richer by attracting such men and keeping them in the fancy.

Mr. Cleveland has been chosen to fill the position of secretary and manager of the Madison Square Garden, New York Show held so many years by Mr. H. V. Crawford; a great task surely. He is a man of ability, broad in mind and reason and with a host of loyal friends upon whom he can depend at all times. Mr. Cleveland well deserves the success he has made in breeding, for he has labored hard, long and intelligently, and knowing him as we do, we are assured he will add another and greater success as manager of the New York Show. We wish him well; he deserves it.—H. P. Schwab.

#### THE DICTAGRAPHIC HEN—NEWEST THING IN POULTRYDOM.

Feeding poultry at midnight by electric light in order to force fowls to grow and mature in less time was considered quite a stunt, but it isn't in it with the latest innovation, the Dictagraphic Hen. By the use of a Dictagraph it is possible today to have in reality "The goose that lays the golden egg," only she is a hen or any number of hens. With this wonderful invention the Dictagraph which already has startled the world at large, and is now about to cause a revolution in the poultry world, inasmuch as by the use of the Dictagraph it is possible to make a hen lay two or three times as many eggs as she would under ordinary conditions. Therefore with fresh eggs at 75 cents per dozen you can see a flock of Dictagraphic hens would bring their owner the "golden ducats" in goodly numbers and thus we would have in modern times "the goose that lays the golden egg."

Some truly wonderful stories are told about the Dictagraphic Farm of how the hens there are coaxed to lay an egg every day by means of the Dictagraph and sometimes as many as two or three eggs per day.

## Tolman's White Plym. Rocks

Baby chicks and eggs for hatching. When you order from Tolman, you get the best at a popular price. Eggs and chicks now ready. Circular and price list free.

Joseph Tolman -:- Dept. H -:- Rockland, Massachusetts

## Columbian Plymouth Rocks

The type I breed is the big boned Rock type. Winners at Chicago, New York, Philadelphia, Etc. Splendid matings. Eggs, \$3.00, \$5.00 and \$10.00. Circulars free.

F. M. Clemans,

Mechanicsburg, Ohio

## WALDEN'S BARRED ROCKS

Philadelphia, New York and Baltimore winners. I can please you with quality and price. Quality is my aim, with satisfaction assured. Choice breeding stock at right prices. If you want quality that will improve your stock I can supply it. Write me your wants.

R. J. WALDEN

Box A, Middleburg, Md.

## BUFF ORPINGTONS, BLACK MINORCAS

Now as the hatching season is beginning and you surely want to buy the best stock that you can get for the money, we will quote you a few of our winnings in four state fairs in competition with the large Eastern breeders.

**In the S. C. Buff Orpington Class**—At the Nashville State Fair we won: 1st hen; 2nd cock; 2nd pullet; 3rd and 4th cockerel; 3rd and 5th pen; 5th cock. Also a special premium on the hen for being the best in the fair. At the Alabama State Fair we won: 1st cockerel; 2nd cock; 2nd hen and 2nd pullet. At the Mississippi State Fair, one of the largest ever held in Jackson: 1st cock; 1st hen; 1st and 3rd cockerel. At the Louisiana State Fair we won: 2nd cock; 3rd hen; 3rd cockerel.

We have the nicest lot of S. C. Black Orpingtons which were not exhibited, this year.

**In the S. C. Black Minorca Class**—At the Alabama State Fair we won: 1st, 2nd and 4th cockerel; 1st, 2nd, 3rd, 4th and 5th pullet; 1st and 2nd cock; 2nd, 3rd and 4th hen; 1st and 2nd pen. Also a premium for best display of Aseatics. At the Mississippi State Fair we won: 1st, 2nd and 3rd cockerel; 2nd and 4th pullet; 2nd hen; 3rd cock, and 1st pen. Louisiana State Fair: 1st and 2nd cock; 1st, 2nd and 3rd cockerel; 1st, 2nd, 4th and 5th pullet; 2nd hen; 1st and 2nd pens.

This should be evidence that we have stock or eggs that you are looking for. We have the largest and best equipped poultry farm in the South. You do not have to go East for eggs for hatching season, taking chances on the climate where you can get them just as good for possibly less money. All our stock are free range. They are up to the standard in weight, type and color. Correspondence solicited. Day old chicks only when ordered.

Kenmore Poultry Farm - Maxey Lane & Gallatin Pike : Nashville, Tennessee

## BABY CHICKS

All free range stock and all hatched in our new latest Mammoth machines. This will insure nice, big, strong, vigorous chicks that will win for you in the next Fall shows. We make a specialty of White Leghorns and Barred Rocks. Our prices are very low, considering the high quality chicks we put out. This is our ninth season. Our capacity will be 40,000 eggs per hatch this season.

20th Century Hatchery - Box 73 - Chatfield, Ohio

Like all other wonderful inventions the Dictagraph is very simple, once you understand it and its application to poultry; is also equally simple, once it is understood.

Here is the way it is done. All the houses are connected by means of the Dictagraph, so that when a hen lays an egg her cackle is heard in every one of the houses all through the plant. It has been found that hearing other hens "cackle" has a great influence on the hen that is not laying, in that it gives her the desire to also lay. By use of the Dictagraph the cackle of every hen is reproduced as natural as life in each part of all of the other houses, so that the "laying idea" is given to each and every hen on the plant every time any hen lays an egg.

You can readily see that it is only natural that all the hens "get the habit" and it is expected in the course of a year or two that this influence will have been instilled into the hens to such a degree that it will become so well established as to become hereditary and the birds on the Dictagraphic Farm will be laying two, three and perhaps four eggs a day.

The Dictagraph has many other uses, for instance, it is a very efficient burglar alarm, when a door or window is opened the alarm is given and it is also a superior telephone system. At the Ridge Egg Farm it is installed in all parts of the plant and one can sit in the office or residence and hear just what the chickens are doing in any one of the houses.

Mr. K. M. Turner, the owner of the Ridge Egg Farm, is the inventor of the Dictagraph, the wonderful instrument by which a whisper in the room is repeated equally as loud at any point and a conversation can be heard without going near the instrument or holding a receiver to the ear; the words being repeated with equal volume at the other end of the line. This is the instrument that has recently resulted in the capture and conviction of many criminals.

Mr. Turner, like all brainy men, loves animals and particularly poultry. He is never so happy as when he can get out to his farm and work with his birds; in fact, he lives at the farm all summer in a tent and enjoys every minute of the time spent there.

#### WHITE LEGHORNS.

Mr. Turner's greatest hobby is eggs, nice large, white eggs and plenty of them. To this end he has been breeding his Rockland Strain of Single Comb White Leghorns and the results obtained are most gratifying. At the same time the exhibition points have not been neglected, for Mr. Turner is an old-time fancier and was taking prizes at Madison Square Garden 20 years ago. His cock Rockland 1st headed the second pen at Madison Square Garden in 1912 and he is all that any Leghorn fancier could ask for—snow white in color, grand in size, 5-point comb, fully sickled, low carried, well spread tail and a grace of carriage that is seldom equalled and cannot be excelled. He has produced a cockerel called Rockland 2nd, which is in every way his equal. To these male birds are mated many prize-winning females, classy birds, deserving of such mates.

#### SILVER CAMPINES.

Mr. Turner was one of the first to import Silver Campines into this country bringing over a pen of them in 1908, since which time he has bred and imported many choice specimens of these wonderful egg machines. His birds have won at such shows as Madison Square Garden, Grand Central Palace, Pittsburg and many other shows.

Mr. Turner knows how to breed poultry and he gives a hundred cents value for every dollar received. You can rest assured of getting your moneys worth. He has a large number of pens mated for the egg trade and has stock to spare at most any time. He is quoting special prices on eggs in his ad which appears elsewhere in this issue. Please mention American Poultry Journal.—C. W. Zimmer.

#### EGG-A-DAY STRAIN.

The "Egg-a-Day Strain" of S. C. Buff Orpingtons have been making a wonderful reputation as layers and also as winners of Champion Medals, Special Prizes, Silver Cups, etc. Mr. I. Brooks Clarke, the owner of the "Egg-a-Day Strain," issues a handsomely illustrated circular fully describing his matings and giving illustrations of his prize winners.

During the month of May Mr. Clarke will make a reduction of one-third off on all eggs for hatching, and during the month of June the price will be just one-half former prices. Anyone interested in Buff Orpingtons would do well to look up his ad elsewhere in this issue. Kindly mention American Poultry Journal when writing.

## CHERRY REDS ARE WINNERS

EGGS from four fine matings. Pens headed by 1911-12 winners. Do it now—place your orders for eggs at \$5, \$3, \$1.50 per 15 eggs. Do it now—drop a card for mating list.

ERNST F. BIRKHOLZ Single Comb Rhode Island Reds WILLOUGHBY, OHIO

**I. K. Felch, Box 176, Natick, Massachusetts**

## OF INTEREST TO ALL POULTRY-MEN.

We recently informed our readers of the book soon to be published by the Cyphers Incubator Company, which gives reports of the successful poultry raisers in their \$1,000.00 annual prize contest. We have before us a copy of this book, and we are sure that anyone engaged in the poultry business will find it contains a mine of valuable information for them if they will carefully read the experiences herein given of these people, who have succeeded in all branches of the poultry business under widely varying conditions.

The evidences contained herein prove beyond all reasonable doubt that anyone by close attention to details, can make a success of the poultry business, no matter

where he is located, for the reports in this book come from old and young, from East, West, North and South, from breeders located on city lots, or located at a distance from good markets, etc., etc. We are particularly pleased to note that many of the winners were women, some of them unmarried women. Many of them started with almost no capital at all, in some cases \$5.00 representing the amount of the investment. The returns in some cases are almost phenomenal, averaging \$2.96 per hen profit; some even greater than that, and what has been done can be done again.

We suggest that every one of our readers send for this book, and read its pages carefully. We are sure that no one can do so without gaining valuable information that will assist in making your poultry business more profitable in the future than it has been in the past. A copy of this book will

be mailed to any address, but you are requested to send ten cents in stamps to cover the cost of mailing. Address Cyphers Incubator Company, Buffalo, N. Y., U. S. A.

## SUNSWICK POULTRY FARM.

We have before us a handsome catalog issued by the Sunswick Poultry Farm, South Plainfield, N. J., for the year 1913. Mr. Delafield says that he has endeavored to make this catalog an eye as well as a word picture of the Sunswick plant and the winning birds thereon. In looking over the many handsome illustrations contained in this catalog we agree with Mr. Delafield that he has succeeded in doing so. The photographs illustrate the buildings just as they are in reality, and the illustrations of the birds are typical reproductions of their prize winning specimens as they were found in the show room.

The Single Comb Orpington cock champion, Golden Crown, winner of five first prizes, including Madison Square and Boston, is an Ideal Buff Orpington, and a breeder of prize winners as well as a winner himself.

The book also contains many full page illustrations showing the type and quality of birds bred at Sunswick, where they are now making a specialty of Buff Orpingtons exclusively. Mr. Delafield has installed a mammoth incubator, and is prepared to fill orders for day old chicks as well as eggs for hatching.

They also have a large flock of Buff Orpington Ducks, which have been prominent prize winners in keenest competition in the East. The Orpington Duck is one of the money makers today, being very popular because of their great egg laying qualities.

This catalog is very instructive and very artistic, being printed in sepia brown, and should be in the hands of everyone interested in Buff Orpingtons. Their ad appears elsewhere in this issue. Please mention American Poultry Journal when writing.

## DISSOLUTION OF PARTNERSHIP.

We wish to call the attention of the Rose Comb Rhode Island Red breeders to the fact that R. F. Shelley has taken over the entire stock and assumes full control of the business formerly known as Maltbie and Shelley. It will be remembered that the flock of R. C. Rhode Island Reds formerly owned by Robt. Tuttle at the time of his death was purchased by Maltbie and Shelley and the writer has had the privilege of inspecting the pens after they were mated up and we assure you they were all birds of the highest quality, being all that any R. I. Red breeder could desire. This firm has enjoyed excellent trade during the past, having supplied many of the winning specimens at some of the largest shows in the country.

The pens this year are stronger than ever before and the price on eggs has been reduced. Under the new ownership of R. F. Shelley customers can be sure of prompt, careful and courteous treatment in every respect. Mr. Shelley issues a catalogue giving full description of his matings, prizes won, etc. Any one interested in R. C. Reds will do well to send for it. Kindly mention American Poultry Journal when writing.—C. W. Zimmer.

F. S. SMITH, HAMILTON, OHIO.

## SILVER WYANDOTTES

Ohio's Blue Ribbon Winners. They still lead as winners. At Cleveland with four entries won 1st pen, 1st and 2d hen and 2d pullet. Get your egg orders in early. A few breeders yet to dispose of. G. F. STEWART, COSHOCTON, OHIO.

## Columbian Wyandottes Silver Campines

Grand Columbian Matings from our Cleveland and Columbus winners. Our Silver Campines are the direct product of England's most noted winners, and American bred. We guarantee Good Hatchable Eggs.

C. L. PATTERSON (FREE CIRCULARS) BARBERTON, OHIO

## PARTRIDGE ROCKS

Erin Strain—Four grand pens mated for season's egg trade, including 1st prize winners at Atlanta, Ga., Pittsburgh, Pa., and Chicago. Write for show record and mating list.

W. O. LYLE & SON -:- GNADENHUTTEN, OHIO

## S. C. BUFF AND WHITE ORPINGTONS, S. C. BUFF &amp; WHITE LEGHORNS &amp; BUFF ORPINGTON DUCKS

Stock and hatching eggs from our New York, Baltimore, Philadelphia and Allentown winners. Send for catalogue.

## S. C. and Rose Comb White Leghorns

The home of best Rose Combs in America—Write for mating list

LILY WHITE POULTRY YARDS -:- LINCOLN, ILLINOIS

## Automatic Sanitary Trap Nest

Made of sheet metal, vermin proof, strong and durable. Requires no attention. Operated exclusively by hens, separating layers from drones. Cheapest, best, simplest. Write for free booklet or agency.

AUTOMATIC SANITARY TRAP NEST CO., DULUTH -:- MINNESOTA

ALBEMARLE-HOFFMANN  
NEW YORK

A new modern hotel representing a Five Million Dollar investment on the site of the former Hoffman House.

Broadway, 24th St., Fifth Avenue

THE ACME OF ARCHITECTURAL PERFECTION  
LOCATED AT THE HUB OF NEW YORK'S GREATEST BUSINESS.  
OVERLOOKING MADISON SQUARE.

Accommodations for 1,000, offering maximum luxury and comfort at much lower rates than offered in any other Hotel in America, consistent with highest class service.

A GOOD ROOM AT \$1.50 PER DAY  
A GOOD ROOM, WITH BATH, \$2.00 PER DAY

Handsome Apartments of any number of rooms at proportionate rates. The Management is a guarantee of the highest refinement and protection to ladies and families.  
DANIEL P. RITCHEY.

We are pleased to receive word from Mr. Smith, the well known breeder of S. C. Buff Leghorns, that while he lost considerable by the flood which recently visited Ohio, that he is still on top and doing business at the same old stand. He lost some of his breeders and all of his incubators were ruined, including 5,000 eggs partly incubated, but he came through with 1,000 fine breeders left and is still prepared to supply eggs for hatching, as Mr. Smith had already hatched 3,500 youngsters for his own use, which were on other farms. He will make a special reduction of one-half price on eggs after June first, and will have thousands of eggs to spare at \$1.00 per 15 or \$5.00 per 100. Anyone interested in Buff Leghorns will do well to take advantage of this opportunity and secure some of Mr. Smith's prize winning strain of Single Comb Buff Leghorns at one-half his former price. You know Buff Leghorns mature very quickly and eggs hatched in July will mature in time to be laying before the breeding season next year.

Mr. Smith has a reputation for square dealing and you can rest assured that any order will receive prompt and careful attention, if placed in his hands. His ad appears elsewhere in this issue. Please mention American Poultry Journal when writing.

## WILLIAM BARRY OWEN RETIRES FROM BUSINESS.

Owens Farms Sold to Maurice F. Delano.

Having been identified with the poultry business for a number of years and having had the confidence of the people generally, I feel it my duty, as well as my pleasure, to tell the poultry fanciers of the United States my reasons for retiring from the poultry business; to thank them for the warm support and patronage which they have extended to me in the past, and to say a few words about Maurice F. Delano, who has succeeded to Owen Farms' business.

A number of years ago when I retired from active business it was after many years of the hardest work of my life. I was at that time very much run down in health and far from feeling able to do the kind of work and the quantity of it that I had been doing in the past. Retiring and coming to Vineyard Haven, which was my native home, I took up the breeding of poultry which was, as I have said many times in the press before, a hobby of my youth and because I loved thoroughbred poultry and took great pleasure in breeding the best that could be produced. Little did I think at the time I entered upon the work how fast it was going to grow and that Owen Farms was destined to build up flocks in the most prominent varieties of poultry that were second to none in the country, and that a business would flow from it as great and perhaps greater than any fancy poultry business has ever attained. Our last year's business was over \$80,000 cash in the mail.

Unfortunately, however, the enthusiasm for the business grew and before I knew it I had put so much time, thought and hard work into it that, instead of serving as I wanted it to serve, as a pastime and pleasure, it came to be work beyond my strength. I therefore have had to face the situation and with great regret make up my mind that I must retire from active work. Perhaps the pleasantest hours of my whole life I shall always recall as the hours spent in the development of the fancy poultry business of Owen Farms. And I want to take occasion right here to thank the thousands upon thousands of people all over the United States who have entrusted us with their money and to whom we have tried our utmost to render the very best of service, complete return for their expenditure with us, and to win from them that most cherished of all expressions, "I am satisfied."

I herein announce to all those friends and to all interested in Owen Farms that I have sold my complete flocks of all birds just exactly as they have been mated this year and just as they are at the present time to Maurice F. Delano.

Maurice F. Delano needs no introduction to those who are at all interested in fancy poultry. He has been the manager of Owen Farms since its inception. He has been a judge of every large show nearly in the United States. Has been serving as an officer of nearly all prominent special club organizations. Has the reputation of being without a peer as a poultryman, honest, enthusiastic and tireless in his endeavor to satisfy everyone with whom he deals. You can well know how gratified and proud I am to pass over Owen Farms' business to such a man.

I am also further pleased to announce that Maurice F. Delano has leased the entire facilities of Owen Farms, including all of their houses, yards, brooders, and in fact every individual portion of their equipment, and that the business will be conducted with the same birds, the same farms and the same advantages that Owen Farms have ever possessed. I am glad to state that during the whole existence of Owen Farms William Barry Owen's policy has been Maurice F. Delano's policy, and that Maurice F. Delano's policy in his management and running of the business has been William Barry Owen's policy. I cannot say this too enthusiastically or too forcibly. The consequence is that the policy of making a great and good business founded upon absolute fairness and justice to all will be carried on, I am sure, by Maurice F. Delano with perfect continuity.

I am also authorized to state that Frank H. Davey, who has been with Owen Farms so long, who was once the head of Grey-stone Farms at Yonkers, and than whom the world knows no better poultryman, judge or man, will continue with Maurice F. Delano as his superintendent, and Mr. Delano will also retain practically all of the other members of Owen Farms' force.

proprietor that he will be more than glad to receive a word from any and all customers of Owen Farms during the past, and also to say that any Owen Farms' customers can write to him fully, frankly and freely concerning anything they may have in mind, and they will have the same generous, courteous consideration and treatment that I believe they have hitherto always received.

I sign myself still yours for more and better poultry.  
Wm. Barry Owen.  
Vineyard Haven, Mass., April 10, 1913.

## A VISIT TO THE SIMPLEX FARM.

In the December issue of Poultry Pointers, I wrote at some length about what I had seen at Simplex Farm, which was then known as the Husted Poultry Farm, of the work that was being done with the Simplex Brooder Stove.

I have since heard so much about what was being done, and have had so many

out. These chicks, of course, were weak to begin with. The mortality of but 3 per cent is astounding, when you take into consideration the fact that eggs were two days late in hatching. All things taken into consideration, I do not or cannot see why anybody should wish to continue in the old way. To say that the Simplex System is a wonder is putting it lightly.

On the day that these chicks were seventeen days old, Mr. Monroe informed me that there were five of them that went to roost on roosts which were placed across the corner of the brooder room, and stayed there for the night. Since they are doubling up very fast, and at the age of five weeks it is safe to bet that 50 per cent of these chicks will be roosting. We are informed that the roosting is the least of the troubles with the chicks raised around a brooder stove, as they go to roost early, and there is no trouble teaching them, for they naturally take to the roost. These chicks, at the age of twenty days, were of the size

"doubting Thomases" question the truthfulness of the published account, that I decided to investigate closely and dropped into the farm unannounced. What I am about to say is what I saw, with my own eyes, and am willing to more strongly endorse the Simplex Brooder Stove as being the only satisfactory means of raising little chicks.

In the first brooder I found 1,239 chicks in one lot around one brooder stove. These chicks at the time of my visit were twenty days old. The mortality record, which is kept on the wall, showed a total mortality of forty-one chicks out of the astounding number of 1,239 being brooded in this manner. Mr. Monroe, the farm manager, informed me that there were 125 chicks in the lot which were very weak when placed in the brooder, as they had come off in a mammoth machine, and not being familiar with the operation of same, the eggs did not receive the proper amount of moisture, and quite a number of them died in the

of any Leghorn chicks I ever saw at the age of five or six weeks. In fact if I did not know and did not see the dates and records, it would be hard for me to believe. With everything in the condition that it was in, I could not help believing what I saw.

This stove is being operated on a consumption of two and one-half gallons of low grade refined kerosene in twenty-four hours, which is delivered to the farm at a cost of eight cents per gallon, making a total cost of twenty cents per day for fuel to care for 1,200 chicks.

I then went from there to the office of the Simplex Brooder Stove Company, and saw Mr. Husted, who showed me a number of letters which he had received from customers. Such letters as these should be evidence to every line poultryman that the quicker he gets a brooder stove in operation, the quicker he will begin to triple his profits, save his back from the laborious

ers, and on top of it not have that heart breaking mortality.

The Simplex Brooder Stove outfit consists of the complete stove, containing one solid cast-iron burner on legs surrounded by an iron container, one heavy sheet steel radiating drum, one heavy sheet steel deflector on top, one tee elbow of heavy sheet steel, sufficient one-fourth inch pipe with elbows and all connections necessary, one fifteen-gallon galvanized heavy sheet steel oil tank, one thermometer, and one Simplex Automatic oil regulator.

Mr. Husted informed us that the Simplex Company were arranging to put in use an automobile which will leave the office daily at 10 a. m. and 2 p. m. Patrons who are interested in the brooder stove and wish to see the same in operation can either call at the office or arrange by telephone and the auto will take them to the farm and show them exactly what I saw. Orders for the Simplex Brooder Stove should be placed as far in advance as possible.

R. C. Saunders.

### MAKING THE MOST FROM POULTRY.

This is the title of a book issued by the Robert Essex Incubator Company, Buffalo, N. Y., which is filled with testimonials praising the Essex Model Incubator and brooder by breeders from all over the country. These testimonials came entirely unsolicited by the Essex company and furnish undisputed proof of the value of the Essex Model Incubator as a hatching machine in the hands of the average poultryman. They also testify as to the vitality, vigor and size of chicks hatched in these machines.

### For Sale at a Sacrifice

the entire stock of prize winning Partridge and Buff Cochins and Buff Laced and Golden Polish chickens of the late Dr. H. F. Ballard.

Mrs. H. F. Ballard :: Chenoa, Ill.

### White Diarrhoea!

Tablet No. 3, a guaranteed cure or money back. J. C. Fishel says, "It does the work." Tablet No. 5, a sure preventive or money back. Big box of either 25c, both 40c.

Nabob Remedy Co., Box 1, Gambier, Ohio

### Golden Wyandottes

At the great and noted Boston Show Jan. 1913, I won on Golden 1st display; 1, 2 and 4 cock; 1, 4, 5, and 6 hen; 1, 4, 5, and 6 cockerels; 1 and 5 pullet; 2 pen and a lot of specials. I have a fancy lot of stock for sale, but no eggs this season. Please mention A. P. J.

LOREN H. BROWN

Lock Box 16 Lunenburg, Mass.

### R.C. MINORCAS

First prize winners New York, Chicago, St. Louis and elsewhere. Trap-nest bred for egg production. Stock and eggs for hatching, at all times. Catalogue free

You know it is not only necessary to be successful in getting the chick out of the shell, but it is equally important to hatch chicks that will live to grow to maturity.

It is certainly very pleasing to any firm who are manufacturing a good article to receive such congratulatory letters testifying to the results obtained, especially when these letters come entirely unsolicited, as they have in this case. The Robert Essex Incubator Company manufacture a complete line of poultrymen's supplies which are fully described in this book, and it should be in the hands of every poultryman. It is free for the asking. Address Robert Essex Incubator Company, Buffalo, N. Y. Please mention American Poultry Journal when writing.

### OLD ACRES FARM, FOXBORO, MASS.

### "Tabasco Strain" S. C. Rhode Island Reds.

The "Tabasco" Reds, as the name well implies, are a very hot line, in fact red hot, for during the seven years that we have known them, they have been coming along fast and have made their quality felt and respected by all breeders of this popular breed and variety. Their winnings at Madison Square Garden, New York, and Boston, particularly during the past four years, form a record of extra value with ample proof of this strain's quality.

During the past three years at New York and Boston shows they have on cockerels alone won five (5) of the possible six (6) first prizes, a record of greatest merit and unequaled. Besides this they have won other prizes of value at both of these exhibits. At this writing we haven't their complete record, but we do know that at the last Madison Square Garden New York Show they won, including first prize cockerel, also first and second pens, and at Boston, 1913, first cockerel and second pen with two entries. For all the years they have been exhibiting they have been consistent winners. Year by year they have improved their stock and their records and promise to do so for some time to come. The strain that improves has blood and line value in it assuring breeding quality. Herein lies the breeder's best hope for success, as all other values are second to real breeding and reproducing quality, and this in particular is stronger and of greatest value in Reds and parti-colored varieties.

The Old Acres Farm is but twenty miles from Boston and in a section noted for its climate and its successful poultry breeders; in fact this whole state seems particularly adapted to choice poultry raising. That the Reds thrive here is very evident from what we have seen. The plant is large and convenient, and the birds in rare condition. It is a plant built for business and run on principle and we feel assured that all who deal with this firm will receive value and satisfaction.

The owners, Mr. W. C. Stephens and Mr. A. U. Dilley, have made a careful study of the breeding questions as well as of the general poultry conditions, and having made a pronounced success of both, we are pleased to commend them.

Their matings this year form a beauty collection. Type with beautiful head points and the brilliant red color are the features. Here are thirteen (13) pens of birds mated and headed by New York and Boston winning males; they are leaders and in a class by themselves, for half of them are first prize winners in the cockerel and pen classes.

We believe that our readers well know the quality required to win at Madison Square Garden, New York, and Boston. It is presumed and no doubt a fact that the best birds produced are shown at these exhibits yearly and when we again refer you to the records this line has made at these exhibitions, you will understand that some of the best and most valuable Reds ever seen are here on the Old Acres Farm and in those thirteen pens.

The old, old saying that "Blood Tells" is evident here in rare and evenness of quality. The birds are uniformly mated with similar character; the females alike and selected for their worth and line; the pens contain each from six to ten females; each bird is where it should be, for the slogan is ever improvement, and quantity has no consideration. In the females as in the males type closely followed by color are the prominent features noted: good head points, eyes, wings, tails, etc., all go to make this line one of high merit and substantial worth.

In pens 14 to 17, inclusive, we found particular interest, but very few of these birds have been shown; they have had no opportunity to make a record, and that is

males and a choice lot of females; the matings made with greatest of care are sure to produce some of their best birds. They are of the same blood lines as their New York and Boston winners and in every particular quality birds.

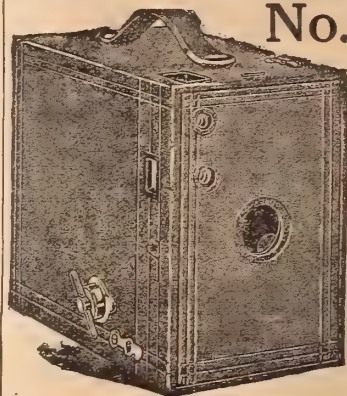

It is well that this is proving to be "Old Acres" banner year. They have both quality and quantity to supply all demands. Fertility is proving very strong, and the stamina and vigor of the line is seen to advantage in the 600 chicks now out. These youngsters are coming fast and give promise for the future. The past records of the "Tabasco Reds" is safe in their keeping.

We were very much delighted with all to be seen there. The plant is complete; the birds in both old and young all we could desire, and they are ready to give the best of attention to all their patrons in exhibition birds for early and late shows, for they will have finished birds in August. Exhibition and choice breeding birds. Baby chicks and eggs for hatching are what they offer their customers.

The poultry houses are of the fresh air, open front plan, with pens 10x16 feet and ten acres of land to run over. Their largest house is 300 feet long, the balance in colony houses. They have 2,300 egg incubator capacity. We hope in this or in our next issue to show pictures of their birds and plant.

Wherever we have gone in our travels

## BROWNIE No. 3

PICTURES  
3 1/4 x 4 1/4

PRICE  
\$4.00

You can make good pictures with a Brownie Camera.

Made by Kodak workmen in the Kodak factories, the Brownies are efficient, durable, practical. Made on the Kodak plan, they are simple.

Take for instance the No. 3 Brownie. It is substantially made in every detail. Though it makes 3 1/4 x 4 1/4 pictures, no focusing is required. It's always ready. It has a carefully tested meniscus achromatic lens; is fitted with the Eastman Rotary shutter for snap shots and time exposures, and with a set of three stops. There are two finders; one for vertical and one for horizontal exposures, and two tripod sockets. It loads in daylight with Kodak film cartridges for four, six or twelve exposures. The covering is a tasteful and durable imitation leather, the metal parts are heavily nickle-plated. Price, \$4.00.

With a Kodak or Brownie no dark room is required for any part of the work—loading, unloading, developing or printing. You can readily finish your own pictures or can safely send the film cartridges by mail to a professional finisher.

You can make good pictures with a Brownie.

Catalogue free at your dealers, or by mail.

EASTMAN KODAK CO.

418 State Street ROCHESTER, N. Y.

we have heard words of the highest praise for this farm, its owners and its stock, and we now can understand the reason for all. They are the kind of breeders we have confidence in, for they deserve their success. They now have about fifty cockerels for sale on which they make a special price and a combination offer that it will be well for the breeders to look into, for from what we know of this line "Tabasco Strain" blood is a good thing to have around—a good investment.—H. P. Schwab.

D. W. YOUNG, MONROE, N. Y.

We have often asked ourselves, and have heard the question fully debated, "What would the Leghorns have been today if there had been no Dan Young?" To our mind there is no question but that our present-day Leghorns are due entirely to Mr. Young. Their type and size as well as their quality and popularity are due to him; he is their champion and their maker, for he brought forth his beauties which were accepted models for all to breed to. From his boyhood and with his father before him the improved Leghorn has always been the question and the stock seen at his home today is the result of over sixty years of continuous breeding, study and effort.

From a very crude article with a short

## Raise 90 Per Cent Of the Chicks

With a Nu-Rinkle fireless brooder, no smoke, no fire, no smell, no danger, no worry, no expense, quit the old expensive lamp method, save time and money and raise the chicks. One brooder, freight paid east of Rockies, \$5.00, 4 for \$18.

back and shorter body, a high tail, short thin neck and monster comb, to the Leghorns of the present day, is a long step forward and when we consider the sixty years of labor it also becomes a costly one in that one sense to this party, but the results are here; they are evident the whole world over, and every country and every people have been benefited by the work of this man. His work and his name will live forever and in time to come will more than now be appreciated, although we all love him for what he is and for what he has done for the poultry industry and his fellow man.

We lately spent a day with Mr. Young at his home and after looking over all his stock and plant, he asked for our opinion of his birds, as seen, to which I replied, "Mr. Young, put all your birds in one coop, blindfold me and the first bird I catch I will hold up and can claim I have the best Leghorn in the world." We have seen this line yearly for the past five years and we have each time written of their beauty and value; still we are free to say that the general improved stock seen there now surpasses all expectations. We believe in the reply made to Mr. Young, for such stock and such a line warrants it fully. They are not all first prize New York winners, but they are the line that for fourteen or more years have produced the greatest winners at all the greatest exhibitions. Their individual value may be worthy of either a blue or a red or probably less, but their blood and line quality has for so many years reigned supreme that it offers the positive assurance of there being "None Better."

Here are pens after pens headed by first prize winning Madison Square Garden New York males and others of their line and of equal worth, for the records show that for many years this line has been a constant winner and almost without interruption has won the highest honors at America's greatest shows. Time and time again he has won all prizes offered in different classes, and this on both males and females alike. From first to last these pens were a magnificent collection, the "Young" type evident in all, the males with their wonderful backs, broad and long in saddle, full rounded breasts and the neat low and strong set combs, and last but not least the long feathered tails, full and grandly carried, give them the trim that so long has been the feature of this line.

There is method in these birds and in their quality. They have been bred up to the highest ideal type that nature intended for them and at which they are at their best from every viewpoint. This shape and size fits them perfectly, for it has made possible their laying qualities as well as their quality for early maturing, quick growing with plumpness reserved with vitality and vigor for which they are famed.

Mr. Young has given in his mating list this year a very careful description of each pen and the records of the birds used, to which we would refer our readers. Most of the males used here we have before described at their winning date and it was a pleasure to again go through these pens and handle those "Princes of Quality" whose records are history. Just how Mr. Young keeps his birds in the condition he does we can only guess, but it is a fact we did not see a frosted comb or damaged wattles or lobes on the place. In color they are naturally snow white, in full feather and in show condition right now in the center of the breeding season.

Here was one cockerel mated, a bird never shown, that is to our mind the peer of all Leghorn males ever seen. He carries himself grandly, simply can't get out of the ideal no matter in what position you see him. We walked around him for half an hour and the longer we looked the more we admired. He has all that we imagine any Leghorn can have, and when you can see such quality carried to perfection, we can well ask ourselves if a positive ideal will ever be had. That cockerel has it nearer than we ever hoped to see it, and we do hope we will never be asked to score that bird unless every judge and breeder could see him at the same time.

Back of that bird and back of all this line are the years of study and labor. We can today see the result and it is worthy of the effort. We are all benefited by it and we can only in a faint way imagine what a satisfaction it must be to Mr. Young himself to know that the results of his labors meet with the general approval mainly because they have made the general success possible. No man has worked more successfully nor has done more for the general welfare of an industry than has Mr. Young for poultry and we are not going to wait until he dies to tell the world our opinion of him and his work and we are glad to add he is meeting with the success

buildings, which are of the best and very complete; also of his farm and location, with an ideal climate and conditions and his beautiful home. All these are parts of his success and he appreciates them. We hope he may live long to enjoy them, which would also insure greater success and greater possibilities for poultry in the future. We look to "Dan" Young with confidence, and will hope that one of these days he will tell us in his own way his mode of line breeding that has made the "Young Strain" all that it is and the full results of his feeding experiments, all of which he has unraveled properly, which is proven by his results. Yes, we can all learn from him, for he has proven himself a master, having "Done Things."—H. P. Schwab.

## ROBISON'S QUALITY BUFF ROCKS.

One of the most successful breeders of Buff Rocks is W. S. Robison, Fayette, Mo. The Buff Rock is one of the most practical and profitable varieties we have. Buff is a popular color, being admired by all, and any solid colored bird is easier to breed than a parti-colored variety. The Buff Rock is a good layer and unexcelled as a table fowl.

Mr. Robison has been winning the lion's share of the blue ribbons in keen competition for the last nine years. We assure our readers of a fair deal from him. His ad appears in this issue. Mention American Poultry Journal.

## A FREE SAMPLE COPY.

Of the Reliable Poultry Journal, one of the most practical poultry papers published, will be mailed upon receipt of a postal card request. A 4-months' trial subscription will cost you only ten cents. Stamps are acceptable. Address Reliable Poultry Journal Pub. Co., Box E-13, Quincy, Illinois.

"How to breed and feed Buff Dottes." Elegant and instructive Text book, only 20 cts.

## DUSTON'S WHITE WYANDOTTES.

There are but few if any names better known to poultrymen than that of Mr. Arthur G. Guston, So. Framingham, Mass. As a breeder and judge his work has brought him before the people and his success an example of what poultry possibilities are. True, his advertising has also been prominent and in this he has also demonstrated poultry pays when business methods are used and the confidence of the public attained by fair and honorable treatment to all.

We have visited Mr. Dustin several times in the past and have each time seen better birds and better matings than we expected. With all this we are free to say that this year he has far better birds and pens than ever before. He in his matings banks on general quality and not on special features. He wants strong, sound birds all over, not alone in any one particular; and this kind of selecting and breeding has always proven the safest to rely on; it insures the best of general quality, good all-around specimens.

The matings as usual are small. No fillers are used: evenness of size, shape and finish is seen in all. Combs just alike and very neat, and in all rich red eyes. Strong colored eyes and legs with positive white plumage are here combined to a wonderful degree.

The males as well as the females resemble one another; there are no extremes and it is this rich evenness that to our mind adds value to this or any line.

Mr. Dustin is having deservedly this year one of the best seasons he has ever had in his long years as a breeder. He has the birds and the prime quality to serve out and well deserves all that is coming. With his beauty pens and with a big egg demand he is sure to add many new notches to his string of fame. We were greatly pleased with all seen here in stock and the business line. Mr. Dustin is a worker and gives his personal attention to all details.

Mr. Dustin, besides as a breeder, is in great demand as a judge. His work at the last Boston show was commended by us and others and particularly by the exhibitors; when the losers commend the judge we can assume his work was done right, and let us also add that we admire such exhibitors.—H. P. Schwab.

## ROCKANDOTTE ROCKS AND WYANDOTTES.

Mr. and Mrs. W. R. Graves, Southboro, Mass., have for years specialized the White Plymouth Rocks and White Wyandottes and have made a reputation and business probably second to none in this country. By extensive exhibiting at the great fall and winter shows and by selling birds that have won has placed their "Rockandotte" in the front ranks of popularity.

Our acquaintance with Mr. and Mrs. Graves dates back many years. It is one of the kind we admire and as time passes we are even more strongly assured that breeders of this stamp will deserve all we possibly can do for them. They have faced and met the conditions confronting those starting alone and have won their way, which surely proves the value of their work and line and their fair and generous treatment of all customers.

To review the record of their line at this time is hardly necessary, for we would refer you to our reports of the late Madison Square Garden, New York, Boston and other exhibits of this and last season. They have entered at the best and have always made a record and showing of credit to any breeder. Their first pen of White Rocks at the late Boston Show was the feature of the exhibit and they have won this same distinction at New York, Baltimore, Chicago, Pittsburg, Memphis, Nashville, Atlanta, etc., while birds of their breeding have been just as successful in the hands of their customers.

This season they have an unusually fine set of matings in both their varieties which promise well for the future. They contain their great winners and birds of equal blood lines mated with skill and for quality only. They sell eggs without reserve from their matings which will assure the success for the buyer. Space and time will hardly allow us to describe the matings as we would like, but we have written them up before and our readers well know what they can expect from this line.

Their White Rocks have the best of size and form, well carried and of sound positive white color. There is no coarseness to their make up, but large frame, well filled and extra full and low carried tails. Combs and eyes seem to be a line feature and one of extra value as found here.

share the favoritism of both Mr. and Mrs. Graves. It is from beauty to the sublime for the White Wyandottes, aside from their well known practical worth, have when seen at their best form a make-up bound to attract the eye and to create a desire. Their curves with plumb bodies endears them to all, while their style is simply magnificent.

Both the White Rocks and White Wyandottes have the practical quality which assures poultry success and this line particularly combines those with standard qualifications of highest merit. Mr. Graves' record of years is back of them, which is the very best recommend we can give to them, for he is known the country over as one of our most successful breeders and one of our best poultry judges. In this we must also give credit to Mrs. Graves, for she like her husband has made a record both as a breeder and judge of which we all are very proud for such proper stand for the uplift of the fancy and for better poultry all the time. Write for their circular and any information. Improve your stock with "Rockanotte" eggs.—H. P. Schwab.

## BETTER MASH FEEDER.

Poultrymen agree that one of the essentials in scientific feeding of fowls to produce rapid maturity and proper egg production is a device that will keep a supply of dry mash in reach of the fowls at all times.

The problem has been to devise a feeder which will supply the mash conveniently and at the same time protect it against waste and keep fowls from scratching straw and litter into it.

This problem has been solved by the "Perfection" Feeder, on which patent is pending. This ingenious feeder consists of a pail-shaped hopper supported on cross-pieces above a deep pan. As the hopper has a handle, the entire feeder may be suspended by a cord or wire in the poultry house, high enough to keep it free from straw or litter and safe against rats—yet within reach of every fowl. For further information regarding "Perfection" and "Champion" Feeders, write to the manufacturers, the Poultry Appliance Co., 959 16th St., Milwaukee, Wis.

## ORPINGTONS

**A. F. TARRY BOX A, YORKVILLE, ILL.**

**SKYLANDS FARMS, STERLINGTON,  
N. Y.**

Our annual pilgrimage through the east would be very incomplete without a visit to Skylands' famous plant. A trip to this farm is exhilarating to mind and body alike and we look forward to it with pleasure. The farm comprises upwards of 2,000 acres of land, with forty-nine miles of improved roads skirting and climbing its hills and as many miles of climbing honeysuckle vines covering the fences and rocks. Beauty is everywhere, in its natural state and improved by the hand of man, truly a lovely place.

Here Mr. Harlo J. Fiske has built his plant and raises and breeds his wonderful line of S. C. White Leghorns. We have carefully noted this line for years. It was always a top-notch bred by a natural fancier and for all his years of breeding he has a winning record to show his successful work. Today it is better than ever; his matings, while we expected to see grand ones, were really a most pleasant surprise. Delightful falls to express our opinion adequately. They are made of quality with improvement the desired condition and well assured. Males of type, carriage, head points with full and low carried tails the feature; females with class and years of breeding flowing through their veins. A royal and a most promising lot and a worthy result of Mr. Fiske's years of labor.

The winning record made by this line, while we cannot give it complete, is one of special value, for during the past three years it has played a leading part at several of our best shows. During this time it has won at Madison Square Garden, New York, along with the best two first prizes, two second prizes, two third prizes, two fourth and several others and specials. This splendid record carries with it the stamp of merit and value.

At the great Buffalo Show, January, 1913, and in the largest class of the show, Mr. Fiske by winning every first, second, third, fourth and fifth in all the four single classes, and first, second pen, made the best record winning we know of at any show or with any variety. It was the seal of quality won in strong competition and was well deserved. The first cockerel also won the show champion sweepstake special for best bird in the entire exhibit.

Also at Buffalo in 1910-1911, Chicago, 1911, and at Boston, 1911-1912, this line shown by Mr. Fiske won a total of sixteen first prizes, fourteen seconds, thirteen thirds, ten fourths, seventeen fifths, two sixths and many specials for color, shape, head points, etc.

The S. C. White Leghorns have proven one of the best and most popular varieties and are always found to be one of the largest classes at the exhibits. To win in them means unquestioned quality. The great shows held at New York, Boston, Chicago and Buffalo are sure to draw the best and when we consider this fully, then refer to the above record made by Mr. Fiske in three years' time, we can surely say "Well done."

Mr. Fiske has issued a very neat mating list, describing his pens, which every interested fancier should have for reference at least. It not only describes the matings but gives the winnings and history of his lines. As we have before stated, it takes the best to win at those shows and such birds must be of quality and shown in condition. It is useless for us at this time to particularly describe his birds as seen at their home, for their records are a far better assurance of their worth. While Mr. Fiske's birds have been making their reputation, he too has endeared himself to the breeders he has met. He has won his way step by step with experience and richly deserves the success made, for his lines combine quality with breeding worth and a future full of promise to him and his customers.—H. P. Schwab.

**C. M. AGLER.**

Mr. C. M. Agler, Millbury, Ohio, breeds Single Comb Rhode Island Reds, the kind that win prizes and lay lots of eggs. He reports that he has hatched out a very nice lot of strong, healthy chicks from his very best matings, and that he will be in a position to supply breeders with well developed, top notch prize winners for the early Fairs and Fall Shows. He will sell eggs at one-half price after the 10th of May and guarantees the best quality of stock will be produced from them. Mr. Agler has reports from many satisfied customers who have informed him that stock produced from his strain was of better quality than that secured at long prices from other breeders. His ad will be found in this issue. Men-

**WHITE ORPINGTONS - WHITE ROCKS****INTERNATIONAL CHAMPIONS**

Birds from my yards have won at Dairy and Palace Shows in England, also in New Zealand and at every big show in Canada, New York State Fair 1911 and 1912, ten firsts; Michigan Roundup show, five firsts; Madison Square 1911, 1st, 2d, 3d, 5th and 6th. Birds sold on approval. Duty paid to the United States. Send for mating list. Please mention American Poultry Journal when writing.

HIGHWORTH POULTRY YARDS : Fred A. Andrewes, Prop. : LONDON, CANADA

**VASS ORPINGTONS AND SILVER CAMPINES**

I can give you bargains in Buff, Black and White Orpingtons in single, pairs and pens. I have the best this season I ever owned and will assure you better value than ever before, and fair treatment in all cases. They have show records: Silver Campines, best English and American bred. We have birds in your yards from Capt. Max Debathe of England; also Kennedy and other leading strains. Birds are large, well marked and great laying strain of large, white eggs. You can not make any mistake in taking up this beautiful fowl. They are the rich man's hobby and poor man's friend. Am booking egg orders now. Write for prices; booklet free.

Fred W. Morse Co. -:- Providence, Rhode Island

## S. C. Black Orpingtons

SPRING OF 1913—\$10 Eggs for \$4 for 13—Why are they \$10 eggs? Because they are the equal of any \$10 eggs in the United States, and all are from our celebrated Duke of Kent strain—the greatest prize winning strain of Black Orpingtons in America. Send for egg circular and beautiful 9x12 chromo. Very high grade young stock for sale. Mention Am Poultry Journal when writing.

FOSTER & JOHNSTON, R. R. 7, FORT WAYNE, INDIANA  
Honorary State Vice-President American Orpington Club

## WHAT THE FARM OWES TO ASPHALT.

When you stop to consider the wonderful economies effected on the farm in different ways by the use of natural asphalt in various forms it may well cause you to run back in your thought, trying to trace the origin of this important yet seeming mysterious substance which has made itself really indispensable to the modern aggressive farmer.

Natural asphalt is found in various deposits in different parts of the world. Those in Egypt having been used by the Ancients in nearly the form they found it, to waterproof walls and as an embalming substance to preserve the bodies of their dead, which has kept the mummies of Egypt to the present day.

The Dead Sea, as well as the waters of Cuba, have yielded natural asphalt, and various deposits have been found in veins in this and other countries, but the most remarkable deposit because of its combined uniformity, largeness of area, and apparently inexhaustible supply, is the Lake of Trinidad.

From this source is secured most of the natural asphalt used for modern commercial purposes.

The multiplicity of uses to which it has been found that natural asphalt is particularly adapted, have extended most helpfully to the farm.

In the form of prepared roofing it makes a covering of positive and lasting waterproof qualities, and has the added advantage of being in such form that any handy man about the farm can apply it to any of the buildings.

Then the asphalt prepared in the form of cement is invaluable for rendering damp-proof the walls of cellars, dairy-houses, concrete floors or any similar surface.

Again we find that asphalt paint does invaluable work in protecting all kinds of iron and steel-work such as fences, girders and the like, from rust and all corroding influences.

And in yet another form, as a wood-preserver, natural asphalt effects almost incalculable savings.

Fence-posts dipped and impregnated with it can be made to last indefinitely. The same can be said of planks or lumber of any kind which are likely to be used in damp places. In fact natural asphalt has come to be relied upon for thorough waterproofing anywhere—above ground or below.

Natural asphalt is one of the most potent agents the farmer of today can employ to help him reduce the upkeep expense of the farm, and should be welcomed and used by the intelligent farmer for every possible purpose that it can be put to, because of its unmistakable value.

DR. G. G. BILLMAN.

Dr. G. G. Billman, breeder of "Houdans Worth While," formerly of Evansville, Ind., informs us that after May 1st he will be located at Sullivan, Ind. The doctor is an enthusiastic fancier of Houdans, and is doing good work not only in the line of producing prize winning specimens, but promoting interest in the breed. We understand that he will have better facilities in his new location for raising his birds, and believe that anyone interested in Houdans would do well to write him before placing their order elsewhere. His ad appears in this issue. Please mention A. P. J.

CARVER'S RED FARM.

Mr. A. A. Carver, Seville, Ohio, owner of Carver's Red Farm, informs us that he is making special reduction on his best eggs during the month of June, giving two sittings for \$5.00, in order to introduce his Queen Quality Reds to new customers. This is a good opportunity to get started with this strain, and as Reds mature quickly there is yet time to hatch them. Mr. Carver also informs us that he is building ten new houses in addition to his already large plant, as his growing business demands more room. This is the best kind of evidence that Mr. Carver has an increasing business, and is treating the public right. No doubt that is the way you wish to be treated. A word to the wise is sufficient.

On another page of this issue will be found a list of some of the most valuable Breed Books that have yet been published. Every raiser of poultry should own a copy of the book treating of his favorite breed. Books on other important subjects are included in the list.

You get a special combination rate by ordering with a subscription, but the books may be secured without the subscription if

**WHITE DIARRHOEA CURE DISCOVERED.**

For many years White Diarrhoea has stood between the poultryman and success in chicken and turkey raising.

A new and scientific formula has been discovered, however, which has now had several years of searching trial and has been on the market for two years.

The remedy was discovered by Milton W. Brown, M. A., M. Sc., of Cincinnati, Ohio, and the formula now belongs to the Nabob Remedy Co., of Gambier, Ohio.

The formula was handled last year by the Cheviot Supply Co., but in order to give the formula better financial backing, it has been sold to the above named company.

Seven out of ten persons who ordered the remedy last year have reordered this year, and such letters as the following seem to indicate that the remedy is the one poultrymen have been praying for, for a good many years:

"Afton, N. Y.

Nabob Remedy Co.,  
Gambier, Ohio.

Gentlemen: I enclose money order for \$2, for which send me more of your Prescription No. 3 for White Diarrhoea. I don't intend to try to raise any incubator chicks with neighbors and saved lots of their chicks. Please send price on dozen lots.

Yours truly,  
J. E. Mayhew."

March 26, 1913.

The Nabob Remedy Co. advertises in this issue to send a big box of the remedy absolutely guaranteed to cure or money back for 25c. They claim to have never had a box returned and that millions of the tablets have been sold the past year. Every poultry raiser ought to try these tablets when it may be done under such a guarantee—use the whole box, and if not satisfactory write and get money back in full.

A. C. HAWKINS, LANCASTER, MASS.

We were glad to again call on Mr. A. C. Hawkins and also to note that he has greatly increased his plant and stock since our last visit. Great as this "Royal Blue" line has always been in the past, it is to our mind far superior this season and one of the usual "Hawkins" yearly surprises. Here we saw many pens of Barred Rocks to admire in both cockerel and pullet matings that promise to carry the "Royal Blue" name and colors forward to more fame.

In cockerel matings Mr. Hawkins has surely an exquisite line. Here was seen pen after pen of carefully selected and mated birds of his best lines and with a uniform high-grade of type, color and barring. The males used have size, rich color and even and narrow barring, barring to the skin is the rule here and in all we handled noted this as a feature worthy of special mention. Small sized and well set combs and full heavy tails well spread and carried add much to this line.

In pullet matings we met our real surprise. Mr. Hawkins has always been strong in his cockerel line and in his females as well, but this season he has several pullet matings far superior to any we have ever seen here; they are positively select in their snappy bright barring and proper shade of color; under they also show to advantage. We were much pleased to see these matings.

Here we saw for the first time the M. S. Garden, N. Y., champion cup won by Mr. Hawkins February 13-17, 1883, for best pair of Barred Plymouth Rocks. This was 30 years ago. Then as now Mr. Hawkins was a leader and during all these years he has devoted all his work and efforts to the poultry interests. Thirty years with poultry is some time and we can well say that Mr. Hawkins' experience covers the time from the beginning of Standard bred poultry. In the poultry world he has always commanded a prominent place and has been one of the few prime factors that has helped to place the industry where it is today.

The past year Mr. Hawkins contented himself with a grand winning at Chicago and by making only a display at New York and Boston. Both these displays we commented upon and both were of a quality deserving of special mention. At New York the display was a pullet mating pen and at Boston a cockerel mating pen was shown.

Mr. Hawkins' catalogue is descriptive and gives all information of his birds, etc., and should be in the hands of all interested breeders. It is free for the asking.

**ANCONAS**

Howlett's Famous Laying Strain—Persistent winter layers, 15 mated pens for the hatching egg trade this season, catalog free. Our ANCONAS have won in every show this winter where shown. The eggs we sell for hatching are from the same pens we hatch our own show birds, both combs.

Save  
30% to 50%

**BARRED PLYMOUTH ROCKS**

210 Eggs in 259 Days

This was the official record made by one of the females in our pen at the International Egg Laying Contest at Storrs Agricultural College last year. Our five birds in this pen made a record of 836 eggs in 9 months and 11 days of actual laying. Eggs for hatching. Send for catalogue.

MAPLE GRANGE POUL. YARDS  
S. M. GOUCHER, MOORESTOWN, N.J.

**SPRING WATER'S FAMOUS S. C. W. LEGHORNS**

WE HAVE NO OTHER BREEDS

**Day-Old Chicks**  
**Eggs for Hatching**

No strain can excel "Spring Waters" for vitality and the necessary qualities to produce prize winners. At the recent Baltimore show we won 2 firsts, 2 seconds, 1 fifth and 1 eighth. Our First Prize Pullet being the sensation of the show.

**Our Prices Will Please You**  
**Our Treatment Must Satisfy You**

What we guarantee: That chicks will be hatched from eggs laid by our breeders only; the safe arrival of our chicks; the fertility of our eggs, and that you must be satisfied if dealing with us. Our capacity is 20,000 eggs at one sitting. We have a few choice Breeding Cockerels to dispose of. Write for free illustrated booklet. Write us before placing your order for this season's wants.

**Spring Water Poultry Farm : Stockton, N. J.**

### ONLYA FARM, FLORHAM PARK, NEW JERSEY.

Onlya Farm is a real fancier's poultry plant; this is evident from the stock, buildings and general arrangement, and also with its ideal location. All to be seen there is to be commended, particularly the mated birds, which in both quality and in numbers, surprised us. White Wyandottes have the call here and from their years of records at prominent shows their grade is established to the credit of the owner and manager.

Here in a delightful location Mr. Philip Kearny has built his plant for the poultry he loves so well and has placed it in charge of Mr. Chas. Staaff, a friend of ours for many years. The buildings are new and practical, range ample and just

the kind of place we would select to breed rare birds.

As usual, our main concern was found in the birds, and we feasted our eyes, going from pen to pen, and noted as a feature the general high and even grade in all the birds seen here. There are no extremes in this line, for both the owner and manager know good quality and have labored to combine that with practical worth. The males all through are an even lot, including many famous winners with a character all their own. They are alike and it is easy to see resemblance and line characteristics in all. Of the females the same can be said and their quality from a breeding value viewpoint is of highest value in any line.

To exhibit White Wyandottes means to compete in great classes for they are popular favorites and among the leaders at all shows, which makes their records

valuable and very interesting. "Onlya Farm" birds have been very successful in the show room and we here give their records in condensed form to show what they have really done and to give our readers a line on their quality.

In 1910 they won at N. Y. State Fair, Allentown, Trenton, Hagerstown, Grand Central Palace, N. Y.; Chicago and M. S. Garden, N. Y., six first prizes, six seconds, five thirds, six fourths and five fifths.

In 1911 they were at N. Y. State Fair, Memphis, Tenn.; Hagerstown, Williamsport, Grand Central Palace, N. Y.; Atlanta, Chicago, M. S. Garden, N. Y., and Boston, eighteen firsts, eleven seconds, four thirds, fifteen fourths, eight fifths, and five sixths.

In 1912 they won at Allentown, Hagerstown, Augusta, Grand Central Palace, N. Y., and M. S. Garden, N. Y., seven firsts, six seconds, eight thirds, four fourths, and five fifths.

The reader will note that these birds traveled hundreds of miles to make these shows and the above records, which, to our mind, are of extreme merit and value. Beside the above, they won several display prizes, silver cups and sweepstake prizes for best bird at show on both males and females; at Allentown last fall they won cup and medal for best cockerel at that great show.

The pens as mated promise much; they are classy matings and no fillers used. Every female is a gem and is mated for her known quality and record. Pen 1 has the third prize pen cockerel at the late Palace, N. Y., show, with winning mates, including their second M. S. Garden N. Y. pullet. General uniform types and fine heads noted. Pen 2. Here is the first Palace, N. Y., pen cockerel, a very deep, full bird; stands well. Mates a rich lot, very even and fine fronts and backs; full tails. Pen 3. Surely one of the best, headed by first Allentown cockerel, who won cup and medal for best cockerel in the show. He stands clean, has an ideal back and wonderful tail. He is a Wyandotte every inch of him; several winners among his mates. Pen 4, headed by a winner at Memphis and Augusta; a strong cock, richly mated. Egg records noted here showing an average of 12 eggs per hen in 17 days.

Pen 5. Very much to our liking and the best of form and quality in every bird. Most of them winners. The male first Hagerstown cockerel. Pen 6. Headed by first pen cockerel at Allentown, a blocky bird, massive, shows grand vigor and fine pointed. Pens 7 and 8 headed by brothers hard to tell apart. Both should make rare cocks. They have size and ideal type. Pen 9. The male of extra width and depth, breast shape wonderful, beauty mates. Other pens seen as listed and all of merit. Each has its quality and is desirable. Every bird on this place is absolutely White.

They now have about 400 chicks out, some nearly feathered. They are strong fellows, showing good bone, and stand strong and well.

This farm has had a very successful year, which they and their line of birds well deserve. At the time of our visit they were preparing to ship 20 cockerels and 40 pullets to South America, the large steamer coops were made and all was a hustle.

The large poultry house is of the open front order and in the surrounding fields colony coops were seen where the young are raised. The cockerel house has three tiers of coops for conditioning. The incubator cellar has a 2,400 eggs size Newtown giant machine, which Mr. Staaff assured us was giving splendid satisfaction. The brooder house is next, the room heated, but cold brooders are used, made by Mr. Staaff after his ideas. The chicks show the very best of care and condition, assuring us the brooders used are satisfactorily doing their work.

When we first knew Mr. Staaff he was breeding Barred Rocks, and we find him here making a strain of Barred Wyandottes; they are usually called Coooco Wyandottes. Just why I don't know. Barred Wyandottes would be more appropriate. These birds show fine Wyandotte type and extra fine combs, even and uniform barrings, far better than we dared hope to see. They breed true and we feel there is a future for them if rightly named.

We surely enjoyed our visit to this plant and were particularly pleased with all seen. They have twice the amount of stock we expected, and it is also of surprising quality. It shows their blood lines and breeding back of every bird, the point that is safest to bank for results. It is a pleasure to recommend such birds and such men, and we would

## ZIMMERMAN'S R. C. REDS

Won at Cleveland January 20 to 25, 1913, 2-3 pullet, in the largest class ever exhibited at Cleveland. A limited number of settings to spare. Book early.

REPLACE COVER AND YOU HAVE A CONTINUOUS SUPPLY OF PURE WATER

## MOE'S SANITARY BROODER FOUNTAIN

Little chicks can't get wet. Sits in the corner of brooder. Takes up little room. Can't be upset. If desired can be hung up by hook which is on top of each fountain. Manufactured in two sizes: One qt. and one gal. cap.

REPLACE BOTTOM TURN UPRIGHT. READY FOR USE

If not at your dealers write us to send you one on approval, carrying charges prepaid and when you are satisfied that it is what you want, we will make you a special price on your requirements.

# OTIS & MOE

see for themselves, and rest assured I will welcome the day when I am again headed for Oniya Farm.—H. P. Schwab.

### RUSSELL CAVE WHITE ORPINGTONS, LOUIS LEE HAGGIN, LEXINGTON, KY.

No business can be any bigger than the man behind it. No breeder can produce quality birds year after year unless he not only knows what a good bird should be but also knows something about breeding, so that he can mate his birds with the assurance that the good qualities of any bird or birds will be transmitted and retained equally well or improved upon in the progeny produced year after year.

We are safe in saying that no breeder in the country has ever had any better training in the science of breeding animals than Mr. Louis Lee Haggin.

Mr. Haggin was born and reared on Elmendorf Farm, the largest stock farm in the country, consisting of 7264 acres, located in the heart of the blue grass section of old Kentucky. Elmendorf Farm is noted for the high class thoroughbred stock it has been producing during the past forty odd years.

The most famous horses the world has ever known have been bred and reared here, including, *Salvator*, still holder of the World's record, 1.35½; *Firenze*, known as Queen of the Turf, the well known Nancy Hanks, and scores of others. Elmendorf Farm not only breeds thoroughbred horses but cattle, sheep and hogs.

Mr. Haggin, as a boy, became deeply interested in the study of scientific breeding of animals, and never has there been a time since then that he has not been a close student of breeding, making many tests and noting results. The knowledge thus gained early in life is invaluable to Mr. Haggin in his poultry business. This is why we say no breeder ever engaged in the poultry business with as much experience in the science of breeding as has Mr. Haggin.

**Quality Foundation Stock.**  
Knowing only too well the value of good foundation stock, Mr. Haggin started with the best stock obtainable regardless of price. Many birds were secured both in the beginning and since at very long prices, for he never stopped at price if a bird had quality, stamina, vigor and breeding qualities. No matter how good an individual bird might be he was discarded if he did not have breeding potency coming up to Mr. Haggin's ideals.

Not only this but the climate, pure air and water of the blue grass section of Kentucky have been credited as contributing to the extreme high quality, size, stamina and vigor of stock produced here. Therefore Mr. Haggin is again favored in this as is no other Orpington breeder. The mild Kentucky climate makes it possible for the breeding and growing stock to be out on the blue grass range later in the fall and earlier in the spring than other breeders less favorably located. The short time breeders are confined in winter and makes them come through with much greater vitality and the longer growing season is a decided advantage in growing size and bone, particularly on Orpingtons.

Knowing the value of pedigree and line breeding, Mr. Haggin has all houses equipped with trap nests and all stock are trapped nested and line bred.

**Buildings.**  
One of the important things in raising topnotch birds is to always have them properly housed. The subject of proper buildings has been given considerable study by Mr. Haggin and all buildings at Russell Cave Poultry Farm are modern, sanitary, and conveniently arranged. Plenty of fresh air and sunshine have been provided for and they are kept scrupulously clean at all times. The houses are situated in an orchard which furnishes shade and all yards have sufficient south slope to drain well. It will be readily understood with the unlimited knowledge of breeding, and the other natural advantages possessed by no other breeder it is but a natural consequence that Mr. Haggin should produce stock with extra stamina, vigor and breeding potency. Birds that are exceeding close to standard requirements and that win the blue in the keenest of competition. Mr. Haggin devotes several pages of his handsome catalogue in giving his long list of prizes won by his birds.

**Russell Cave Catalogue.**  
Mr. Haggin issues one of the handsomest catalogues published by any breeder. It gives you much valuable in-

formation, besides illustrating his birds, buildings, etc. It should be in the hands of every breeder of White Orpingtons. Mr. Haggin's ad. appears elsewhere in this issue. Please mention the American Poultry Journal when writing.

### PLEASURE AND PROFIT.

This is the title of a catalogue issued by Chas. G. Pape, Fort Wayne, Ind. Mr. Pape is a well known breeder of Single Comb Black Minorcas, having successfully competed for the blue ribbons at many of our National shows and having furnished prize winners all over the country, for many years.

His catalog will be of interest to all breeders of Black Minorcas as it contains much valuable information concerning them. Mr. Pape is making special introductory offers on pairs, trios, pens and flocks, and is also furnishing eggs for hatching at less than one-half published price after May 10th. This catalog is free for the asking. His ad will be found elsewhere in this issue. Please mention American Poultry Journal when writing.

### THE 20TH CENTURY HATCHERY.

The 20th Century Hatchery, located at Chatfield, Ohio, was not affected by the flood that recently devastated a large portion of the state of Ohio. They wish us to inform our readers that they are prepared to fill all orders for day old chicks promptly, as all train service has now been renewed. They are prepared to supply you day old chicks from Single Comb White and Brown Leghorns, Barred Plymouth Rocks, Rose Comb Rhode Island Reds, and Broiler Chicks, all from free range stock, and at reasonable prices. See ad elsewhere in this issue.

### SILVER SIDE POULTRY YARDS.

Mr. D. F. Ault, Fort Wayne, Ind., proprietor of Silver Side Poultry Yards, issues a handsomely illustrated catalog which should be in the hands of every breeder of Polish. Mr. Ault breeds Silver Polish and Golden Polish, White Crested White Polish and White Crested Black Polish. He has some very convincing reasons as to why you should breed Polish and particularly the Silver Side strain. If interested in Polish you should send for his catalog and mating list. Mention American Poultry Journal when writing.

### AMATITE SAMPLES FREE!

The manufacturers of Amatite are anxious to have every user of roofings in the country know exactly what their Amatite mineral surface looks like. Accordingly, they are ready to send, without charge, to anybody, a free sample of their roofing.

Simply address a postal card request for same to the nearest office of the Barrett Manufacturing Company, New York, Chicago, Philadelphia, Boston, St. Louis, Cleveland, Pittsburgh, Cincinnati, Kansas City, Minneapolis, Corey, Ala., Seattle.

### BEFORE SUBSCRIBING.

For the American, look up our special offer on page 809 of this issue. Quite a saving in price is made by taking advantage of the special combination rates quoted.

Admirers of the Silver and Golden Campines should write to Mr. S. D. Hall for his catalogue and description of stock he will have for sale July 1st. He also offers eggs for May and June delivery from all his pens at utility prices. At the West Side Cleveland show, Jan., 1913, Mr. Hall won on Silver Campines, 1, 5 cockerel, 2, 4 pullets and 1 pen. He also has at his disposal eggs and stock from winners at the Great East Side Cleveland show. We recommend any one wanting Campines or S. C. W. Leghorns should send for his mating list. Mr. Hall will be glad to advise you what he has and will treat you right.

The world wide circulation of our poultry periodicals is shown by the following: The well known firm of Otis & Moe, Otis Bldg., Chicago, manufacturers of the popular top-fill drinking fountain and many other useful sanitary poultry supplies who confine their advertising almost exclusively to the poultry papers, received in the same mail delivery the other day an order from Hong Kong, China, and an inquiry from Capetown, South Africa. While it is almost a daily occurrence for them to receive inquiries from Europe, the West Indies and South America.

We would like for every reader of this paper, who is interested in Farm Fence, Poultry Fence, Barbed Wire or fence supplies, to write the Coiled Spring Fence Company of Winchester, Ind., for their catalog. It is free for the asking and your request on a postal card will bring it to you. They are certainly quoting some very low prices on high grade fence, and the following wonderful values will be found listed in their catalog: 26 inch hog fence, 14 cents a rod; 41 inch farm fence, 21 cents a rod; 48 inch poultry fence, 22½ cents a rod; 80 rod spool heavily galvanized barbed wire, \$1.55 per spool. This company will let you be your own merchant, by selling their product direct to you, saving you the unnecessary profits of dealers and jobbers. We call your attention to their ad appearing in this issue, believing that it will be to your advantage to learn something of their fence and their plan of selling direct to the farmer.

### ANCONAS, SILVER CAMPINES, BUTTERCUPS AND BREAKELS

Most beautiful of them all. Business and beauty combined. Eggs for hatching. Best winter layers

# CLASSIFIED ADS

UNDER this heading ads will be inserted for seven cents per word each month for less than three months, and five cents per word each insertion for three months or longer. Changes in copy allowed every three months. Numbers and initials count as words. All ads will be inserted under classified headings. No ads accepted at less than an average of sixty cents per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Write your copy plainly, as upon this the correctness of your ad largely depends. When placing your ads remember that advertisers using Classified Ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted. On writing any of these advertisers mention A. P. J. All copy for Classified Ads must reach us by the 17th of month preceding date of issue.

## WHITE ORPINGTONS

Grand young and old stock fit for any breeding pens and at prices you can afford to pay. They are bred direct from my Chicago winners of the last three years. My pens are now mated and I have two that will interest any breeder in the country. Be sure to get my mating list before you book your hatching eggs. My winning of the big Silver Cup for the best display at Chicago, December, 1911, besides 1st pullet, 2d cockerel, 3d hen and 5th cock the year before, is ample proof of the quality of my stock.

Dr. Guy Blencoe, Vice-President Am. Wh. Orpington Club Alma Center, Wisconsin

## BARRED ROCKS-WHITE WYANDOTTES-SINGLE COMB REDS

Woodview Strain Canada's Favorite Line  
Winners at Canada's and America's Best Shows

Guelph, Ont., Dec., 1912, Canada's greatest exhibition. In Barred Rocks, 300 birds competing, we won cocks, 1-2-6; hens, 1-4; cockerels, 2-5; pullets, 1-4 Wyandottes: cock, 1st, etc. Reds: cockerels, 5th; pullets, 1st, etc. Several specials. My 1st pullet was pronounced the best female ever shown in Canada.

Detroit, Mich., 1913. Barred Rocks: Cock, 1-3-4; cockerels, 1-5; pullets, 1; cockerel mating pen, 1st; color and shape special males, etc. My birds have won for several years at Guelph, Toronto, Ottawa, etc.

Special Sale Barred Rock and Wyandotte cockerels, trios and pens properly mated, birds of quality in shape and color, extra values, at exceptional prices for best possible breeding and practical quality.

Eggs for Hatching from selected matings. My mating list for the asking. Write me your wants for Sturdy Stock.

Jno. Pringle

London, Ont.

## THE 1912 REVISED EDITION OF THE AMERICAN STANDARD OF PERFECTION

The only American authority on the required characteristics of all breeds and varieties of chickens, ducks, turkeys and geese. You cannot raise, mate, exhibit or sell fowls intelligently without it.

This Great Book was revised this year (1912) and gives the correct Standard shape, color and weight of every recognized variety of chickens, ducks, turkeys and geese, as well as the disqualifications of each variety. The book contains 332 pages of descriptive matter and ideal illustrations of the different varieties of fowls, photographed from living models. Also

### Five Full-Page Illustrations of Feathers in Natural Colors

to guide the breeder in getting the correct color of plumage on his birds. No one can breed birds of any variety for exhibition without a copy of the American Standard of Perfection as a guide, and it is the only book of its kind published in this country. It is authorized, copyrighted and published by the American Poultry Association. Price postpaid, cloth, \$2; leather, \$2.50

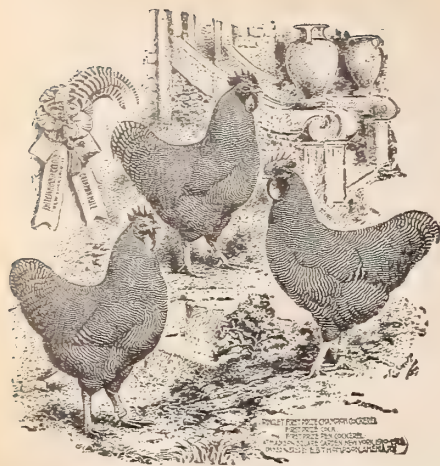

### OUR SPECIAL MONEY-SAVING OFFER

The Standard (cloth) and American Poultry Journal one year.....\$2.50

If you want leather binding add 50c to this price. Canadian subscribers add 25 cents per year for postage; foreign 50 cents

"Ringlet," 1st Prize and Champion Cockerel, 1st Prize Cock and 1st Prize Pen Cockerel at Madison Square Garden, New York, Winter 1910-1911.

The Three Greatest Living Barred Rock Males

# E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks

Win the most remarkable record beyond all precedent in Barred Rock history at the imperial and most classic show of all America—Madison Square Garden, New York—this winter of 1913. Winning as follows:

First, second, sixth and eighth on cockerels. First and sixth on pullets. First, second and fifth on exhibition pens. First on cockerel mated pen. Second, third, fourth and fifth on cocks. The Imperial Prize of the show, Sweepstakes special for champion male. Sweepstakes special for champion female. Diploma presented by the American Poultry Association for best cockerel. Sweepstakes cup for best Plymouth Rock hatched in 1912, male or female, any variety. Challenge silver cup for best exhibition pen. Special best shaped male. Special best colored male. Special best colored female. Best cock, cockerel, hen and pullet, four best cockerels, four best pullets, \$25 special prize, presented by the New York Show for finest display. All silver cups and cash specials four times as many first prizes as any competitor. More first prizes than all competitors combined. More first, regular and special prizes than won by any exhibition of any breed.

## My Exhibition of 56 Birds Was the Best the World Has Ever Seen

No other Barred Rock breeder has ever produced or is producing such matchless quality. Every feather in my exhibit was bred on my farm. My First Prize Champion Cockerel and First Prize Champion Pullet are years ahead of their time. They are the produce of the highest skill. No other Barred Rock breeder has ever accomplished the unprecedented achievement of winning the two greatest prizes in the world, Champion Male and Champion Female, at one show in Madison Square Garden. For 25 years at New York my "Ringlet" victories have been complete; my clean sweep of 1ST, 2ND, 3RD, 4TH AND 5TH PRIZES on pullets has never been approached at Madison Square Garden and stands alone and unequalled. The Imperial "Ringlets" are the standard by which all other Barred Rocks are judged. To meet success in winning prizes you must have my birds and eggs. I will sell you grand exhibition birds for any show, and breeders of this Richest First Prize, New York, blood. Richly illustrated 70-page catalogue upon request. It is full of original pictures of New York winners from life.

**Eggs** From the finest exhibition matings in all the world, \$10.00 per setting; four settings, \$35.00 one hundred eggs, \$60.00.

### CAMPINEOLOGY—Second Edition

"Story of the Living Egg Machines" and what it contains. CHAPTER NO. 1—Greeting, a chapter that will set the poultry world thinking. CHAPTER NO. 2—History of the Campine fowl, ancient and modern. CHAPTER NO. 3—Description and characteristics of Campines in detail. CHAPTER NO. 4—The Campine fowl as I have found them, giving the reasons in full why I do after over twenty years of breeding and experimenting with many varieties recognized by the American Standard, now recommend and breed exclusively Campines and call them "Living Egg Machines." CHAPTER NO. 5—How to select and mate the Campine fowl. CHAPTER NO. 6—Tells you all about the IMPROVED CHAMPION STRAIN or in other words the original exhibition strain and the greatest utility fowl in the world. CHAPTER NO. 7—Prices of stock and eggs for hatching, also my way of doing business which guarantees entire satisfaction to every customer, and a number of boquets that I have received during the past season. Now besides the above seven interesting chapters it contains two beautiful colored plates, each being a work of art, as well as a number of classy illustrations. Ten cents to pay postage will be appreciated.

**WHY CAMPINES?**

This is why. "Dr. J. H. Prudhomme, Dear Sir:- The chix arrived O. K. They are all as lively as crickets now. I have never seen a brighter bunch of little ones. I have a trio of Improved Campines and they are dandies, too. The two pullets have laid 75 eggs since March 1, 1913, to April 15, 1913. We are counting on starting a great line with these three and yours. I never saw birds live on so little and lay so many eggs. Only feed ordinary scratch feed. It is certainly a wonderful bird. Very truly," J. C. C. Sewickley, Pa. (Unsolicited testimonial.) The proof of the pudding is in the eating. From the above you can draw your own conclusion. Let me help you in getting started right, with Improved Campines. It is not too late. Kindly send for my booklet on Improved Silver Campines.

DR. J. H. PRUDHOMME : : : : DESK P : : : : THURMONT, MARYLAND

**JACOBUS' CAMPINES**

## JEFFERSON'S White Runners

Win where quality counts—never defeated. At the greatest show held at Madison Square Garden, Dec., 1911, our ducks controlled the highest winnings. Our winnings include 1st cockerel, 1st pen, second pullet. At Southern International Show, Atlanta, Ga., Dec. 16-21, 1912, our Madison Square Garden 1st cockerel won first cock. Also won 1st cock at Savannah, Ga., Nov., 1912. This winning cock is without doubt the greatest white runner in America. He heads our all-prize pen this season. These great ducks, together with our other prize winners, place Jefferson's White Runners far in the lead. Our string of winnings at Chicago, Cleveland and Savannah include many firsts. Day-old ducklings, 50 cents each. Eggs, \$5.00 per 12, \$8.00 per 24, \$15.00 per 50, and \$25.00 per 100. Why pay more, we guarantee satisfaction. Stock for sale.

Jefferson Poultry Farm, Albany, Ga.  
Citizen's First National Bank Bldg.

## ONEIDA INDIAN REDS

The Strain that has made the Breed Famous. Our Rose and Single Comb Reds made the most sensational win by winning more prizes than all competitors combined. This we consider the greatest triumph of the show season at the Pittsburgh Fanciers' Club Show, February 17th to 22d. We made ten entries in Rose Comb Reds and one pen of Single Comb Reds. We won on Rose Comb, 1st and 3rd cocks, 1st and 4th cockerels, 2d and 3rd hens, 1st and 4th pullets; 2d on single comb pen, 40 points for best display. All other exhibitors combined winning 43 points. We have stock, eggs and baby chicks for sale. Illustrated catalogue free.

ONTARIO VIEW POULTRY YARDS - ONEIDA, NEW YORK

## FISKE'S WHITE LEGHORNS

Were the talk of Madison Square Garden where they won 2d, 7th and 8th on cocks; 3d and 8th on hens; 4th, 5th and 8th on cockerels; 2d, 4th, 6th and 7th on pullets and 1st and 4th on pens; our first pen winning over the first Madison Square Garden pen of last year and the first pen at the New York Palace Show this year. A few males for sale, send for mating list. Mention American Poultry Journal when writing.

Skylands Farm, Harlo J. Fiske, Mgr., Sterlington, N. Y.

I. K. Felch, Box 176, Natick, Massachusetts

# CANDEE

## Hatch Strong Livable Chicks

"My experience with incubators (and I have had a few) is that 'any old incubator' will bring out chicks, but many of them so lacking in vitality that a few hours or days at most is their span of life, while 95% of the Candee chicks are good till they get the axe."—Thomas Mack, West Sunbury, Pa.

### A Report on a Season's Hatching

Having concluded my hatching with my 1200 capacity Candee, I take pleasure in informing you of my eminently satisfactory results. From three hatches I have nearly 3,000 strong, healthy chicks. Your machine is easy of installation. Its operation has caused me less labor and less anxiety than was formerly experienced in operating one 300-egg capacity oil machine.

Your directions are clear and concise. Everything necessary for the successful operation of the machine is included. And having read and followed the directions explicitly, I have been rewarded by unusually fine hatches. You have a machine that will hatch practically every strong, fertile egg. With proper location and careful attention every operator should make as good a showing as I have done.—O. M. Clay, Arletta, Wash.

### Extracts from Letters of Our Customers

The quality of chicks hatched is extra fine, much stronger than I have been able to get from lamp machines at any time during 13 years' incubating.—J. J. Dougan, Cobble Hill, B. C.

I have used about 20 different makes of incubators, but have never had hatches like these before.—C. G. Burroughs, Hillsdale, Mich.

We are certainly well pleased with the Candee incubator. We are running this incubator in competition with twelve other incubators of the finest make, and so far it is beating them. It not only gives us better hatches, but the ducklings are stronger and healthier and much more fluffy.—Bartberger Bros., Hoboken, Pa.

When you are caring for chicks and see every day's difference in their growth, they are growing some. I can see that our chicks are larger to-day than they were yesterday.—J. E. Davis, Bridgeville, Del.

Under the same conditions, try as I may, I can't do as well with my small machines by 10 to 15%, and before using the Candee I thought I was about up to the average.—R. W. Doane, Harwichport, Mass.

I have just taken off my first hatch and it was beyond anything I had hoped for. I did not think it was possible to hatch so many strong, healthy chicks with an incubator.—A. C. Botham, Pomfret Center, Conn.

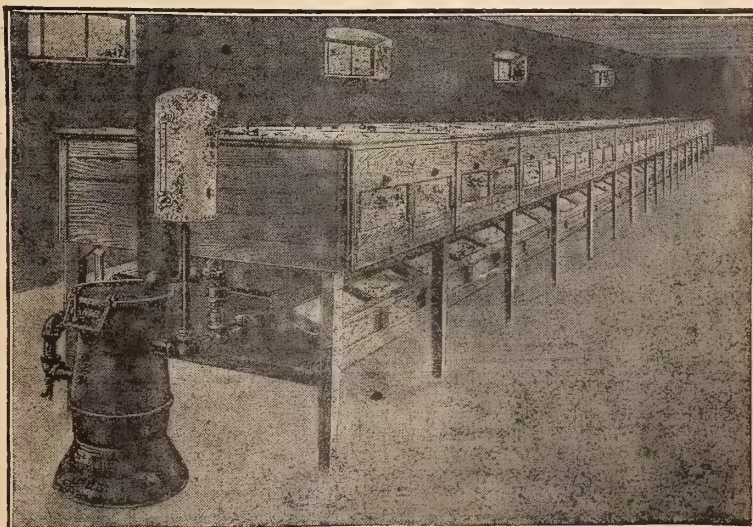

### Now Is The Time To Plan For Next Season

Every statement we have made concerning the wonderful hatching of the Candee is fully proved from Florida to Maine and coast to coast.

Ask any man running a 1913 Candee. Scores are already arranging for extra sections because they were swamped with custom Hatching.

The Candee is the machine for you. It requires the least attention and gives you the highest percentages of healthy chicks that thrive and grow.

Write today for our free catalog of Incubators and Brooders.

# BUILDING MATERIAL

**CHICAGO HOUSE WRECKING COMPANY**  
THE GREAT PRICE WRECKERS

## B-I-G SUMMER OFFER

Special

Right now is the time to buy your lumber and building material, even though you do not need it at once. Prices will never be lower. We have determined that the summer of 1913 is going to be the biggest "SALES" time in the history of this Company, and the way we will do it is by taking our previously low prices, (the lowest ever known and lower than any ever offered by any other concern on earth), and cutting them once again, so that they will be CUT TO THE FINISH. Therefore, if you are awake to the opportunity, here is your chance to buy at a saving of from one-fourth to one-half. We have mammoth stocks right here at our Chicago Plant, and at mills both on the east and west side of the Mississippi river and can make prompt shipment to all points in the United States. We are telling you facts. There are no half-way statements made by us. If you are ready to order, tell us what you want; send us a list of the material you require and we will put a proposition before you that will mean money in your pocket.

**No Money Down** While our established terms are CASH and our guarantee, as published in this advertisement, is so broad and binding that no one need hesitate, yet, if you do not want to pay cash, it will not be necessary. All we want to know is that you are responsible, and that the goods will be paid for when they reach destination, and prove as represented by us. This certainly is a liberal offer. We have unbonded faith in your honesty and integrity, as well as in the quality of our material and our ability to fill your order correctly, otherwise we would not take all the risk.

Grade for grade, our material is the best that money can buy. Every dollar's worth of merchandise offered you in the building material line is brand new, first-class stock; all grade specified and guaranteed. Our lumber and mill work is all brand new, of standard manufacture and is better than can be bought in any first-class lumber yard in the United States. Our prices are positively rock-bottom. Just think of buying a beautiful, modern, up-to-date, two-panel first quality, interior door for as low as \$1.84. You must get our prices.

**ONE-FOURTH to ONE-HALF  
IF YOU BUY AT ONCE SAVED!**

**\$738<sup>00</sup> Buys the Material  
to Build This House**

This beautiful, up-to-date, full two story, 7 rooms and bath, home. Has been sold nearly 1,000 times; copied and imitated all over the United States. Our price and quality cannot be equaled—the price is easily 25 to 50 per cent below local dealer's prices. Immediate shipment right from our Chicago stocks, where you can come and see it loaded. No money down.

\$850 to \$900 is the price asked for similar houses by other concerns. Here, then, is one of our special summer offers, and one which we have been considering for a long time, and have finally decided to make, to all those who during the summer of 1913 see fit to take advantage of this offer. This home is thoroughly practical. Solid, substantial construction throughout. Material all that can be asked. No. 1 joists, rafters and studding; Clear Siding, Clear Flooring, Clear

Shingles. Beautifully grained Clear Yellow Pine interior trim, and above all, the biggest bargain that we have ever attempted. This home has been built nearly one thousand times; we have hundreds of letters (unsolicited) from customers who purchased from us, some of whom saved as high as \$1,000 on the complete home. If others have done it, you can do it by dealing with us.

Now, if you will consider seriously purchasing this home between now and September 1, 1913, we will furnish you the material at the above prices and name you a FREIGHT PREPAID price to your railroad shipping point, that will be far lower than you can obtain elsewhere. We have determined to sell at least one thousand houses before the 1st of September, and you must write today for our beautiful 96-page Book of modern homes, Bungalows, Barns, Portable Houses and Portable Garages. It is the most perfect book of House Plans ever given away. Handsome illustrations, clear floor plans, correct low prices—all at once. Use the coupon below, or merely drop us a line saying where you saw this advertisement and tell us in a general way what you want. We will reply immediately. There will be no obligation of any kind on your part.

**\$2.00 Buys Complete** perfect Blue Print Plans and Architectural Specifications, including full descriptive Material List, giving the size, style, quality and catalog number of the various items entering into the construction of this house. The same price will buy a set of Plans for any of the houses shown in our famous BOOK OF PLANS. If you haven't a copy of it, be sure and write for it at once.

**Send Your Complete Lumber Bill  
for Freight Paid Estimate**

We will make you an estimate and name you our lowest freight prepaid price that will surely mean a big saving to you. Do not put it off—write today.

Come to Chicago. Make an inspection of our mammoth plant, located in the heart of the greatest manufacturing district in the world. You will be agreeably surprised at the magnitude of our establishment, our stocks and our service. We are the only concern that has all its material right here at one plant, where you may come and personally inspect same and supervise the loading of your own car. Immediate action and attention guaranteed.

**Fill in This Coupon**

HARRIS BROS. CO., 35th and Iron Sts.,

It is, however, not necessary for you to come to Chicago in order to get just as good attention as though you were here. We will fill your order correctly, promptly and just as you want it. You can include in your lumber order millwork, doors, windows, hardware, plumbing, heating, roofing, wire fencing, paint, furniture, household goods; in fact, every article bought and used by mankind. We can fill your requirements complete and always at a uniformly low price, and we sell under a guarantee so broad and binding that you are absolutely protected.

## GUARANTEE

**Our Broad and Binding Guarantee:**—This Company has a capital stock of ten million dollars. Its honesty and upright methods have been known for 20 years; we have thousands upon thousands of customers who have yearly taken advantage of our special sales. We say to you, that no matter what you buy from us, if you fail to find the material absolutely satisfactory, and according to your requirements and expectations, then we will take back such unsatisfactory material at our freight expense and pay the freight charges both ways. No fairer offer could be made by any one. We are confident that the goods are right—that's why we have no hesitation in making you this broad, general guarantee under the terms of which you can buy with absolute safety. You will get what you buy, because otherwise we will be under an obligation to take back material at an expense which would not permit us to do anything but what is fair and square. We refer you to any bank anywhere; to any commercial agency; to any express company, to the publisher of this or any other paper and to the world in general.

## Roofing at Half Price

**Galvanized Steel Roofing is Fire, Water and Lightning Proof**

We bought 20,000 squares of this Corrugated Iron Roofing, which we offer at this remarkably low price. It is new, perfect and first-class, but light weight. The sheets are 22x24 ins. x 1/4 in. corrugated. Our price of \$1.25 per square is f. o. b. cars Chicago. When ordering this item specify Lot No. BD-700. This is not galvanized, but black steel roofing. Write us today for our special FREIGHT PREPAID PRICES on new, galvanized roofing. We are offering prices lower than ever before offered in the roofing business. Galvanized roofing at \$2.50 per square and up. Ask for free samples.

**\$1.25**

Per 108 sq. ft. buys best Steel Roofing

We can furnish anything needed in Roofing, Siding or Ceiling.

**62c per 108 Sq. Ft. buys best Rubber "Ajax" Roofing**

Here again we show the lowest price ever known for roofing of quality. This smooth surfaced roofing we are offering is our one-ply "Ajax" brand, and the price includes necessary cement and caps to lay it; this price is f. o. b. Chicago; at 150 per square, we pay the freight in full to any point East of Kansas and Nebraska and North of the Ohio River, provided the order is for at least 3 squares. Prices to other points on application. "Ajax" roofing is guaranteed to wear as long and give as good service as any Ready Rubber Surfaced Roofing on the market.

It is put up in rolls of 108 square feet, and contains three to four pieces to the roll. We have other grades of Ready Roofing, which we offer at prices easily 30 per cent below regular quotations. Write today for free samples and Roofing Catalog. Fill in the coupon.

## Wire at Half Price

**BARB WIRE Less Than 2c Per Rod**

New galvanized, heavy weight barb wire, put up on reels about 100 lbs. to the reel. Lot 2-BD-26, per 100 lbs. \$2.05. Galvanized barb wire, light weight, first grade, best made, put up exactly 30 rods to reel, 2-point barbs. Lot 2-BD-28, per reel \$1.40.

**WIRE NAILS, Per Keg, \$1.38**

10,000 kegs, put up 100 lbs. to the keg mixed, all kinds together, regular nails, such as made by nail factories. Lot 2-BD-33, price per keg \$1.50. 1,000 kegs of ten pennyweight regular new wire nails, 100 lbs. to the keg, while they last, per keg \$1.85. Write for our free Wire and Fence Catalog. Gives valuable information to any land owner. Send coupon.

**Smooth Galvanized Wire, Per 100 Lbs. \$1.25**

It is suitable for fences, stay wires, grape vines or for any ordinary purpose where wire is used. This galvanized wire is irregular in length—it ranges anywhere from 50 to 250 feet. \$1.25 is our price for No. 6 gauge. Other sizes in proportion.

**15c Per Rod Buys Best Hog Fencing**

Here is another one of our remarkable bargains. A high grade, strictly perfect fence made of No. 9, 11 and 12 wires, perfectly adapted for hogs and general farm purposes, 26 ins. high, square mesh, put up in suitable size rolls. Lot 3-BD-31 per rod 15c. Other heights in proportion. Staples, 100 lbs. \$1.75.

BUYS

**THE GREATEST POULTRY BOOK EVER PUBLISHED**

**ORIGIN AND HISTORY OF ALL**

**BREEDS OF POULTRY**

**THIS BOOK** gives the origin and history of the Standard varieties of chickens, ducks, geese and turkeys; also a detailed description of color, shape, weight, etc. of Light and Dark Brahmas, the Cochins, Plymouth Rocks, Wyandottes, Leghorns, Dorkings, Orpingtons, Houdans, Creve Cœurs, La Fleche, Faverolles, Spanish, Minorcas, Anconas, Blue Andalusians, Hamburgs, R. I. Reds, Langshans, Polish, Games, Game and Ornamental Bantams, turkeys, geese and ducks. It also contains

**198 Pictures in Natural Colors**

drawn from life. The pictures alone are worth many times the price of the book. This book also tells how to mate the different varieties for best results. In fact it is one of the most valuable books for both the amateur and the experienced poultryman. This book contains 64 large pages (9x12) of solid reading matter, besides the colored plates. It is neatly bound with paper cover. It should be in every poultryman's library. Send for a copy today, direct to the publishers.

**AMERICAN POULTRY JOURNAL PUB. CO., 542 SOUTH DEARBORN ST., CHICAGO, ILL.**  
**SEE OUR CUT PRICE ON BOOKS ELSEWHERE IN THIS ISSUE**

# Poultry Books

## AT A CUT PRICE

A complete list of poultry books that everybody interested in poultry should have. This list is made up with the idea of supplying the wants of all poultrymen, and covers about every phase of the industry; in fact, this list of books make almost a complete poultry library, and by taking them all at a cut price you will be well equipped to make a success of this business. The books in this list tell you how to line breed, how to feed for egg production, how to reduce your feed bill, how to mate to produce exhibition birds, how to prevent and cure diseases, how to mix a balanced ration, how to build poultry houses, poultry appliances, etc. Following is the list:

### DR. PRINCE T. WOODS' NEW BOOK HOW TO RAISE CHICKS

128 PAGES—35 ILLUSTRATIONS

A down-to-date manual on breeding poultry. Tells in plain language how to select and mate breeding stock, what to feed and how to feed it, how to care for and manage breeding stock, how to select eggs for hatching and how to care for them before and during incubation, how to get good hatches with incubators, how to raise chicks with hens and brooders, how to prepare home-made chick foods, how to build brood and colony coops. It also gives facts about White Diarrhoea, including prevention and treatment, and much other valuable information that cannot be obtained elsewhere. Price 75 cents.

### OPEN-AIR POULTRY HOUSES FOR ALL CLIMATES

By Prince T. Woods, America's Leading Authority on Practical Poultry Keeping

The best house book ever published. Be sure to read it before you build or make alterations in your poultry houses. 88 pages and 46 illustrations. Tells how to build the kind of houses that the most successful breeders all over the country are building and recommending. The "Fresh-Air House" has come to stay and you will want to build one. It means better fowls, freedom from disease in the flocks, better egg yield, better fertility, better chicks. No matter where you live, if you keep poultry you need this book. This book gives full plans and specifications. Price 75 cents.

#### Origin and History of All Breeds of Poultry

This book gives a complete history and the origin of all the recognized varieties of chickens, ducks, geese and turkeys, and is illustrated with 138 colored pictures of fowls painted from life, something never before attempted by any publisher. This is, without question, the greatest book ever published on poultry. The artist's work alone on this book took almost one year's time to complete, but it shows the fowls in their natural colors and correct shape, and these colored pictures, together with the history of each variety, gives the fancier all the information to produce fowls for either exhibition or breeding.

**How to Mate**—This book also tells how to properly mate the different varieties of fowls to produce birds that will conform to standard requirements. This is something that even the Standard of Perfection does not do. It tells you at a glance what it will take years of practical experience to learn. It is a book that no breeder or fancier can afford to be without, as it is just as suitable for the needs of the experienced fancier as for the amateur. Price \$1.00.

#### Successful Poultry Culture

Contains 128 pages and is a practical treatise on everything you want to know about the poultry business. It tells you his method of saving three-fourths the feed bill, and many other valuable pointers which will save you many times the price of the book.

Space will not permit a detailed description of the entire book, but the following will give you an excellent idea as to its great value. Besides 30 illustrations of standard bred poultry and poultry houses, it contains chapters on the following subjects: The Way to Succeed; Some Interesting Poultry Statistics; The Pleasure of Poultry Culture; Advice to Beginners; Poultry and Pin Money for Women; Boys and Poultry Culture; Poultry on the Farm; How to Succeed on a Small City Lot; How to Succeed with a Large Market Plant; How to Get Eggs in Winter; How to Feed Young Chickens; Success with Incubators; Success with Brooders; How to Cure Diseases; How to Build Poultry Houses; Plans for Model

Poultry Houses; Profits in Poultry Culture; Scientific Feeding. Regular price \$1.00.

#### Diseases of Poultry

By D. E. Salmon, D. V. M., Chief of the United States Bureau of Animal Industry. Every poultryman should have this book in their poultry library. It contains 250 pages, and every disease to which fowls are subject is treated in a most thorough manner. The cause, symptoms and cure of each disease is put before the reader in such a manner as to be understood at a glance. With this book in hand you can be your own poultry doctor. Better order one now and not wait until your fowls become ill. Regular price 50 cents.

#### "Why Poultry Pays and How to Make It Pay"

A book for the beginner in poultry raising and for those engaged in it who are interested in deriving from the business the greatest profit. The book tells you how to start right, how to succeed with poultry, how to line breed, how to win at the shows, how to breed and prepare fowls for market, how to feed for the production of eggs, contains a chapter on poultry diseases and simple remedies for same. Gives instructions on incubators and brooders, much other valuable information and is profusely illustrated with ideal drawings of standard fowls. Price 50c.

#### "How to Build Poultry Houses"

A book devoted to the construction of poultry houses and fixtures, gives plans and specifications for building all kinds of poultry houses, brood coops, nest boxes, dust boxes, shipping coops, etc. It will save money by telling just the kind of house desired for the different localities and the size best suited for the various sized flocks. Regular price 50c.

#### American Poultry Journal Hand Book

Contains valuable recipes and trade secrets, feed, care and management in health and disease. Pocket size, 15 cents.

**Total \$5.15---Cut Price for the Eight Books, Prepaid, \$3.40**

This is a saving to you of one-third from the regular price. Better order now before the price is advanced. If you want only a few of these books send in full price, as no reduction is allowed from the list price unless all eight books are ordered. You need all of them. You can also get any 50-cent book and a full year's subscription to American Poultry Journal for \$1.25, a 75-cent book and a full year's subscription to American Poultry Journal for \$1.40, or a \$1.00 book and a full year's subscription to American Poultry Journal for \$1.50.

# S.C.W. Leghorns

THAT LAY, WEIGH AND WIN

**Y**OUR SUCCESS, whether it be for the introduction of new blood or laying a foundation for your stock, depends upon the reputation of the man behind the firm from whom you secure your stock or eggs. Believing as I do, that the majority of the people are honest, I stand ready at all times to make good, stock or eggs secured from me, any claims that my customers might present. My business at present has reached such proportions, that it is almost impossible for me to meet the demands with the seven thousand head of stock that I have on hand. It is impossible for me to describe our methods of rearing poultry in so small a space, but if you will send for my illustrated mating list, which is sent free on request, you will receive in a concise form our ideas of a down-to-date poultry plant. Or if you will send fifty cents in stamps or coin, I will send you post-paid my 64-page catalogue which explains in detail every phase of the poultry industry. This book, as is everything else bought of the E. W. Grove, Jr. Poultry Farm, guaranteed satisfactory or your money back.

Now is the time to book your orders for eggs and join the list of satisfied raisers of Grove strain of S. C. White Leghorns. All orders delivered in the order in which they are received. Yours for better poultry,

*E. W. Grove, Jr.*

Route 1  
Clayton, Missouri

It's not the brand on a horse that makes him travel, nor is it fine feathers on a hen that makes her win or lay, but their breeding.

ties to produce prize winners. At the recent Baltimore show we won  
2 firsts, 2 seconds, 1 fifth and 1 eighth. Our First Prize Pullet being the  
sensation of the show.

## Our Prices Will Please You Our Treatment Must Satisfy You

What we guarantee: That chicks will be hatched from eggs laid by our  
breeders only; the safe arrival of our chicks; the fertility of our eggs, and  
that you must be satisfied if dealing with us. Our capacity is 20,000 eggs  
at one sitting. We have a few choice **Breeding Cockerels** to dispose of.  
Write for free illustrated booklet. Write us before placing your order  
for this season's wants.

## Spring Water Poultry Farm : Stockton, N. J.

## If I Buy Baby Chicks Will They Mature Into Pullets Like These?

Will they grow into birds that I can feel proud of and that will lay Winter eggs in quantities, or win the blue ribbons  
for me, or will they be just scrubs that's the question before everyone who buys day-old chicks. It is not the first  
price that counts, but will they be right at maturity?

## Caldwell's White Plymouth Rock (Fishel Strain) "Baby Chicks of Quality"

### From Utility Matings

Will mature into long backed, well made birds,  
pure white in color, that will be the secret of  
"Winter eggs." Every utility breeder is de-  
scended from known good layers that have been  
bred that way.

### From Exhibition Matings

Will mature into blue ribbon winners. Every  
exhibition pen is made up of birds with good  
combs, of good type and chalk white in color,  
possessing the rich blood lines of generations of  
Fishel blue ribbon winners. Our birds were  
among the principal winners at the Indiana Fan-  
ciers' Show, Indianapolis, 1912.

### A New Catalog Is Now Ready

One of the finest ever issued by any breeder. It  
tells just how "Baby Chicks of Quality" are pro-  
duced and describes every grade of stock that  
we have to sell with prices. A copy is ready for  
you.

### The Caldwell Selling Plan

Not only arranges for the man who or-  
ders in advance, but for the one in a  
hurry. Thousands of eggs are setting  
which will make possible

Delivery of any number on short notice.

**R. C. Caldwell : Box 1021 : Lyndon, Ross County, Ohio**

**Rhode Island Whites**

A New favorite with a reason—At Chicago, Dec., 1912, in largest and best class of R.C. Rhode Island Whites ever seen, McCarthy's Peerless Strain made a clean sweep, winning 1st cock; 1st hen; 1st pullet; 1st pen; \$25 cup for best display and \$15 cup for best shape R. I. White. As every prominent breeder, both East and West, had his birds entered, it proves that the Peerless Strain is the best in the world. Send for our illustrated catalog and mating list. Carl D. McCarthy, Box Y, Kempton, Ind.

**HOUDANS**

"WORTH WHILE" The greatest utility chicken on earth. Absolute non-sitters and lay big white eggs. I guarantee winners for any show. Stock, eggs and baby chicks. Write for mating list which is free. Mention A. P. J.

DR. G. G. BILLMAN Sullivan, Indiana

**S. C. W. LEGHORN EGGS AND CHICKS**

That will develop into exhibition birds and heavy layers. Our Baby Chicks are the kind that live. I guarantee safe arrival of eggs and chicks. Write me.

N. V. FOGG :: BOX R :: MT. STERLING, KY

**COLUMBIAN WYANDOTTES**

Beautiful—Profitable—Great Winter Layers—Prizes at leading shows. At Baltimore, 1913, on 7 entries, won 7 prizes and 3 specials. Stock and eggs for sale. State what you want. Circular free. Please mention A. P. J.

H. H. Hewitt Box 427 Williamsburg, Pennsylvania

**Breed a Live Breed**

Improved Silver Campines. Do it now. Be a live one. Why? Because they are beautiful, useful and popular. Send for my booklet telling about this unique breed.

Everlasting layers of LARGE, WHITE EGGS.

# GREAT COLISEUM POULTRY SHOW

AT CHICAGO, ILLINOIS

Fifth Annual Exhibition--December 12, 13, 14, 15, 16, 1913

**Our Past Record**—Four of the most successful shows ever held in America. **Our Aim**—The world's greatest poultry exhibition. We have paid more premiums and put on more real down-to-the-minute features than any other show in America or abroad. We lead, others follow. If a feature is good, you will always find us first to introduce it. Nearly every act of the Coliseum show has been followed by other successful exhibitions. Look for our 1913 list; it surpasses all the rest. **No Risk, No Chances, Everything Guaranteed**—We, the undersigned stockholders, pledge ourselves, individually and collectively, to pay every premium offered by us that is won by the exhibitors: Ernest Kellerstrass, Reese V. Hicks, E. E. Richards, Frank Hare, Geo. H. Rudy, Jas. W. Bell, A. and E. Tarbox, D. M. Palmer, J. C. Dinsmore, H. C. Dippel, C. S. Byers, Chas. G. Pape, A. E. Martz, Wm. A. Stolls, C. C. Coulter, Wm. A. Sibley, Theo. Hewes. Premium list Nov. 1st. Entries close Nov. 25. Your name on a card addressed to the secretary will guarantee that list will be mailed on time.

Theo. Hewes, Secretary : : Indianapolis, Indiana

## YOUNG'S STRAIN S. C. WHITE LEGHORNS

(I HAVE NO OTHER BREEDS)

My strain won every prize and special offered at the world's greatest show, Madison Square Garden, New York, January, 1913. My individual winnings were: Cocks 1-3-4-5-6; hens 2-4-5-6-7; cockerels 1-2-3-6-7; pullets 1-3-5; pens 3-5; Elmhurst trophy, value \$150.00, for best display; New York State Cup, value \$50.00, for best display; New York P. & P. A. Special, value \$25.00, for best display. N. S. C. W. Leghorn Club special for best display; special for best cock; special for best male; special for best shaped male; special for best colored male; special for best headed male; special for best cockerel; special for best pullet; special for best female; diploma presented by A. P. A. for best cockerel. In fact, for the past ten years, my strain has won in every show of any note in the United States and Canada. They are the standard for all the Leghorns of America, and the greatest layers of all varieties of domestic fowl. (Remember you cannot win without my strain.) Mating list free. Address

D. W. YOUNG - - - MONROE, NEW YORK

## EGGS : FROM MY CHAMPION PENS OF : EGGS Silver and Golden Campines

My winnings at Allentown, Hagerstown, Grand Central Palace, N. Y., Philadelphia, Boston and Madison Square Garden, 1913, in the hottest competition ever shown, crown my birds the **champions of them all**. I won four times as many firsts as all other breeders combined. My mating and egg list is now ready. It's free for the asking. Now is the time to order your eggs. Satisfaction guaranteed. Mention A. P. J.

Manhattan Farms : Geo. E. Noeth, Owner : Brighton, New York

## LESTER TOMPKINS' Rhode Island Reds

The originator of this famous strain that has made the Reds one of the most popular breeds of fowl on earth, always at the front both in the show room and laying contests.

### My Recent Winnings at Madison Square Garden and Boston

prove they are still in the lead, winning display special at both shows, 1st hen in both combs and all female shape specials at Garden, 1st cock and shape special in single comb. Also all display specials and state cups for both combs at recent Boston show against birds that had been considered unbeatable. My breeding pens this season are simply grand. Prices right. Baby chicks from high class selected utility stock at \$25 per hundred.

Manufactured in three sizes: 1, 2 and 4 gallon. A hook on each fountain for hanging up when desired.

REPLACE COVER AND YOU HAVE A CONTINUOUS SUPPLY OF PURE WATER.

OTIS & MOE, 2011 Otis Building, CHICAGO, ILL.

**Roofing As Attractive in Price  
—As in Color**

You'll admit this roof looks attractive—in distinctive colors of red or green. But for most home builders its chief attraction lies in its remarkable economies. Let's begin with its first cost. NEPONSET Proslate Roofing costs less to buy than good shingles. Greatly reduces the cost of repairs. No shingles to split, crack or "curl up." Remember, the shingles of today aren't the shingles of 20 years ago. NEPONSET Proslate Roofing makes a water-tight blanket. And best of all, resists fire—is "spark-proof." Its protection from fire-hazard alone is worth all its cost. Its first cost is its only cost, too. Can you afford NOT to have NEPONSET Proslate Roofing on your roof?

**NEPONSET**

**Waterproof Building Products**

**Roofings**

NEPONSET roofings are a fire protection, leak-proof and long lived. Anyone can lay them. NEPONSET Paroid Roofing is for general use. NEPONSET Proslate Roofing is an ornamental roofing for dwellings. Attractive colors.

**Building Papers**

If NEPONSET Waterproof Building Papers are built into walls and floors, the building will be warmer, will cost less to heat and will last years longer. Recommended by architects, engineers and building owners everywhere.

**Wall Board**

NEPONSET Wall Board is a scientific product which takes the place of lath and plaster; comes in sheets 32 inches wide. Remember, it is the only wall board with waterproofed surfaces that requires no further decoration. Anyone can put it up.

Are you going to build? Write for valuable information about modern ways to waterproof and weatherproof. Send for samples, free booklet and name of nearest NEPONSET dealer.

## IN ONE YEAR ON A TOWN LOT

is the title of a new book that we have just completed, and is the amount of money actually made in one year by H. Cecil Sheppard of Berea, Ohio, with his chickens, and he tells in a very comprehensive way just how he did it. Anyone can do the same thing if they pursue the same method as Mr. Sheppard did.

This book is printed on high-class enamel paper, is profusely illustrated, contains nearly 100 pages of reading matter; bound in cloth, and divided into nine chapters, as follows:

<b>CHAPTER I—THE ROAD TO SUCCESS.....</b>	<b>11</b>
Practical information—Selecting the breed—Start on small scale—Pigeons—Buy good stock to start with—At the poultry shows—Advertising pays well—Importance of advertising—Doubled my capacity each year—Selecting the variety—My actual experience step by step—Living on a town lot—A little paradise in five years.	
<b>CHAPTER II—INCUBATORS AND BROODERS.....</b>	<b>19</b>
Placing the eggs in the incubator—Importance of cooling the eggs—Running the incubator the right temperature—Keep the brooder clean—Preparing the brooder for the chicks.	
<b>CHAPTER III—CARE OF CHICKS.....</b>	<b>23</b>
Don't chill the young chicks—Right temperature the third and fourth weeks—Feeding the young chicks—Green food necessary for young chicks—Charcoal and grit important—Sprouted oats a great egg producer—Perfect winter quarters—Automatic feeders for growing stock—Don't force the breeders.	
<b>CHAPTER IV—POULTRY HOUSES.....</b>	<b>31</b>
Open air houses most satisfactory—Birds singing in zero weather—The ideal chicken park—The necessity of cleanliness—My first eggs four months—Imported the best stock obtainable—How I commenced advertising—My first order for hatching eggs—Chickens laying all fall and winter—Increasing advertising increases business—Good results at end of year.	
<b>CHAPTER V—PLEASURE AND PROFIT.....</b>	<b>33</b>
Sales \$9,515.00 sixth year—Gives up everything for chickens—A square deal for everybody—Building up a good character—The science of salesmanship—The four stages of salesmanship—Good stationery and catalog important—Found it necessary to move to a farm.	
<b>CHAPTER VI—WHAT TO DO EACH MONTH OF THE YEAR.....</b>	<b>45</b>
Care of young stock—Houses thoroughly cleaned and sprayed—Orders and shipments—How to ship the birds—Birds need extra care in November—Getting the birds ready for the show room.	
<b>CHAPTER VII—MATING STOCK.....</b>	<b>51</b>
The male is half the breeding pen—Catalog and mating list—shipment of eggs and baby chicks—How to ship baby chicks—A colony house from a piano box—June end of hatching season—The pleasant smile.	
<b>CHAPTER VIII—THE AMERICAN QUEEN.....</b>	<b>59</b>
Good time to get interested in poultry—Possibilities of the hen—Poultry business offers grand opportunities.	
<b>CHAPTER IX—ORIGIN OF ANCONAS.....</b>	<b>63</b>
Color of the Ancona—Shape—Habits—The fancier's fowl—As a utility fowl.	

The price of this book is \$1.00, but in order to give our subscribers an opportunity to secure a copy, we make the following offer:

## Sparks can not burn J-M Asbestos Roofing

On plant of the Medina Foundry Co.,  
Medina, Ohio, J-M Asbestos Roofing  
has for years withstood a continuous shower of sparks  
from a cupola stack. Scores of cases are on record to prove  
that J-M Asbestos Roofing has saved buildings from des-  
truction by resisting the action of burning brands and embers  
blown from adjacent fires. J-M Asbestos Roofing affords per-  
fect fire protection. Fire, chemical fumes and weather have no effect  
on it—because it is all mineral, and, therefore, practically indestruc-  
tible. Composed of layer upon layer of Asbestos Felt cemented with  
Trinidad Lake Asphalt. Literally a sheet of pliable stone.

## Cheapest-per-year Roofing

J-M Asbestos Roofing contains nothing to rust, rot, peel or crack. Never  
needs coating or graveling. ITS FIRST COST IS THE ONLY COST. Adapted  
to all buildings. Easily applied. We ship direct if your dealer can't supply  
you. Write nearest Branch for illustrated Book No. 2626

# TYPEWRITER SENSATION

**TWO DOLLARS  
A MONTH**

**Buys a genuine standard No. 2 SMITH-PREMIER Typewriter and at \$71.70 less than the manufacturer's price.**

Never before has anything like this been attempted. Dealers get \$3.00 a month rent for this make of machine not nearly as perfect as the one we will send you, and you pay only two dollars a month and own it.

**Send the Coupon and We Will Ship You This Smith-Premier Typewriter**

When the typewriter arrives, deposit with the express agent \$8.30 and take the typewriter three days and try it. If you find it to be the best typewriter you ever saw, satisfactory in every respect, keep it and send us \$2 each month, until our special price of \$28.30 is paid. If you don't want to keep it, return it to the express agent, and he will give you back your \$8.30 and return the typewriter to us. We will pay the return express charges.

You won't want to send this machine back after you have seen it and tried it. You can't imagine the perfection of these machines till you see one, and the price is \$71.70 less than the catalogue price, and it is guaranteed just as if you paid \$100.00.

Perfect machines only, complete outfit, nothing extra to buy, no strings of any kind to this offer. Just think of buying such a typewriter for \$8.30 down and \$2 a month. Thousands of people have paid \$100.00 cash for Smith-Premiers. It's standard, by many considered the best typewriter ever built. A key for each character, so each character is always the same; a type brush for cleaning the type built into the machine; the tilting carriage; comes to you with tools, rubber cover, everything ready. It runs beautifully. It's wonderfully simple and strong. It will last a lifetime. I sold a similar supply of these beautiful machines about a year ago to everybody's satisfaction.

**Only 200 Orders Will be Filled on This Offer—Act Today to be Sure**

The coupon states the terms. Fill it out, send it now, today. You can't lose, and it's the greatest economical typewriter opportunity you will ever have.

## COUPON

**HARRY E. SMITH,  
No. 180 N. Dearborn St., Chicago.**

Ship me a No. 2 Smith-Premier f. o. b. Chicago as described in this advertisement. I will pay you the \$20.00 balance of the special \$28.30 purchase price, at the rate of \$2.00 per month. The title to remain in your name until fully paid for. It is understood that I have 3 days in which to examine and try the typewriter. If I choose not to keep it I will carefully repack it and return it to the express agent. It is understood that you give the standard guarantee for one year.

## The Value of Poultry Inventions

Important Discoveries Relating to Poultry Keeping Surprisingly Few  
and Generally Very Simple.

By H. H. Stoddard, Riviera, Texas

**P**OUULTY KEEPING IS simple or abstruse, according to the viewpoint. Most of the main principles of the art and science can be learned in half a day, aside from fancy poultry affairs and from commercial poultry on a large scale.

To hit the high places with merely one of the hundred fancy breeds is the work of a lifetime. To manage to advantage a large establishment for food purposes demands as much study as almost any business that can be named, since to really master the situation as many years are necessary as are commonly given in preparation for what are called the "learned professions" before beginning practice.

I know of no branch of industry subject to so much conflicting advice as poultry management, or so strewn with wrecks for the last sixty-five years, or in which there is so much time wasted by working at a disadvantage, or in which the workers are so slow to learn.

Evidence of this slowness is apparent in the fact that the colony plan was invented and published in 1870, and though it is now practised in all civilized countries, it took thirty-five years to get well in use. The correct management of sitting hens, a trivial matter at first thought, but one involving millions of national wealth, lagged for twice thirty years.

The important methods and the discoveries and inventions in poultry are surprisingly few, considering the extent of the occupation, and are also generally very simple. For that matter, the most important ideas in all industries, including those on which immense productivity depends, are almost always exceedingly simple. A "kinkum" or "dofunny" so simple as to appear actually a trifling matter sometimes determines the labor of thousands of men and the direction in which millions of capital are invested. Witness Colt's original invention of the revolver.

During sixty years certain ideas in the poultry world, the product of very ordinary brains have determined the use of an amount of labor and money enormous in the aggregate because the industry under consideration is a billion dollar craft and is followed so universally. It would be hard to name any industrial branch whatever, aside from domestic work, such as cooking, that is followed by so many families as poultry keeping is.

Some of the important inventions made since the advent to our shores of strange big fowls from the Orient started an interest in poultry previously unknown are as follows and are

### Very Simple.

(1) The scratch box, scratch room, scratch shed or outdoor scratch place. At its advent a completely new idea. The scratch room was the pioneer which called attention to the importance of exercise when birds, especially breeders, are yarded, and was followed, during the forty years next succeeding its first use, by mechanical "exercisers" of various kinds.

(2) The colony plan, to utilize wide range, promote exercise and save fences.

(3) The incubator and brooder.

(4) Balancing the food. Once one single article was fed, this commonly being corn.

(5) The trapnest. To assist methodical selection of heavy layers for breeding and culling out poor layers unprofitable for keeping.

(6) The hopper for feed. To save labor and keep grain from loss.

(7) Automatic watering. Particularly useful in non-freezing districts.

(8) Open-front houses to allow fresh air, thereby promoting vigor, prolificness and exemption from disease.

(9) The "Rancocas unit" or large flock system. Fought by the writer and everyone else for over thirty years, but now the stone which the builders rejected has become the head of the corner.

(10) Convergent yards. To save sixty-nine-seventieths of travel in attending yarded fowls.

(11) Open-air roosts at all seasons in suitable climates, and in summer time in all climates.

(12) The correct management of sitting hens. To save labor and to secure strong stock.

The last mentioned is of very great importance. Its value will, however, be but feebly recognized next week and next year. Out of the dozen landmarks of progress noted above, it exceeds in value any other single one, save two or possibly three, and exceeds in importance all four of the least valuable ones combined, but I can merely hint at this fact now.

Some of my readers, if limited to twelve points, would be inclined to strike out one or two of mine and substitute others. But the list cannot be very far wrong. There are, of course, dozens of good things, like punches, rings, etc., and details like coops, construction of nests, perches and such like that are not really big landmarks, and such things as cold storage of poultry and eggs, cars for shipping live birds and crates for eggs belong to marketing rather than the management of fowls are not included, neither are the Standard and scores of exhibition affairs.

Of the twelve, ten are mechanical inventions, or methods, involving some sort of apparatus. Patrick Henry it was who said, "I know no way of judging the future but by the past," and progress in the right keeping of poultry will continue to be largely along

### Mechanical Lines.

The mechanical fixtures were contrived because the habits and invincible nature of the birds were studied by parties who in every case, so far as my observation extends, were born fanciers. No, not fanciers exactly. They were born naturalists, or animal lovers. "Fanciers" is too narrow a term. The lover of animals may take to cattle, horses or sheep, and his attention may not have happened to have been given to feathered races at all. Or, if bird life appeals to him, it may be wild birds exclusively that take his spare time. Or he may be a tamer and breeder of cage birds. Or devoted to fishing, or to the fascinating study of entomology. Or to biology in general.

Supposing that domestic fowls are his hobby, he may not be a fancier in the sense commonly understood, that is, a

rotary of the Standard, but may be simply aiming not to cultivate arbitrary or conventional characteristics, but to develop the best there is in the natural traits and capabilities of a race of fowls as it was found (before a Standard was thought of) fresh from the cumulative influences of domestication ages long and partly wild, partly tame, with all its curious characteristics stereotyped through periods of time, older than the pyramids, and richly repaying the study of a lifetime.

The hobby just mentioned is immeasurably superior to that of the fancier whose Bible is the Standard; for the reason, as I have repeatedly pointed out, that the Standard is mainly a code of changing fashions, and after a fashion has been cultivated a while, at an immense outlay of time and money, and is then discarded, like the styles of trousers, gowns and hats, there is then little to show for all the painstaking of years and years.

Fascinating the pursuit is while it is going on. Yea, tremendously so, even to expending

#### Brains and Money

to an extent unbelievable by people who have never visited a high-class poultry show, and there are still many such abroad in the land. But there are lots of things that are fascinating that stop right there, leaving no important results when the game is over. Cards and billiards, for instance. The games played years ago are like names written in sand of the shore, and so are the features cultivated by the fancier and then abolished in favor of new ones not one whit prettier but simply harder to get.

Now contrast the poultry work that has a mechanical basis. The skill that has been employed in perfecting the incubator, for instance. Whatever advantage the machine is destined to bring forth will be the heritage of all future time and will affect the food supply of millions of people. I had a hundred times rather invent something that will aid in producing food for generations to come than create the advanced types of monstrosities in fowls and pigeons that have appeared in England for a century past all put together, were it possible for one person to do this.

A while ago I published in this magazine a description of what I named the "duplicate system" of yards for management of sitting hens, which method pleased me so much that I felt like jumping over a two-story house. Thought it was not capable of improvement. It has worked like a charm with me and saved endless labor and vexation of spirit, and had my sitters been of a better breed, with more uniformity of disposition, it would have worked still better. To find the very best breed for sitting purposes, in the sub-tropics, is a consummation devoutly to be wished. Climate is evidently not just right for heavy breeds.

I kept calling on poultrymen for years and years, to invent good methods of taking care of hens engaged in sitting, but my appeals were largely in vain. In all, volumes of diatribes against mother hens have been written though they are among objects most

#### Worthy of Admiration

found in the entire realm of animal life below the human race. "As a hen gathereth her chickens under her wings," suggests a picture than which there can be no finer in nature in the eyes of her true votaries.

The latest depreciation of the use of sitting birds I have

seen is in the April issue of the Poultry Advocate, from a writer who gives very valuable articles, and is in part as follows:

"I know of just one satisfactory plan of hen hatching. . . . Nests should be made in 'banks,' in rows, well ventilated and yet with door to shut in the sitting hens. I used to have mine in rows of eight nests. I would try to set eight hens at a time, running them all through the hatch as a lot. In the pen would be a box of corn, one of bran, one of oyster shells and grit, with a water fountain. If the floor of the pen did not give dusting qualities, I would have a bushel box filled with good soil. When it came time to feed and water the eight hens the doors of the eight nests would be opened along nine in the morning. A little dropping of the corn into the pan would start several hens off the nests, and those that remained were taken off by hand. Then I would go about other work for fifteen minutes, returning to see what had happened in the sitting room. I would find several nests occupied by hens. Perhaps one nest would have two hens on it, leaving one unoccupied. A hen might be still considering whether to go on the nest or wait till the opened door let her get back to her former quarters. I would get a hen back on each nest and close the door till the next day. Now and then I would find a hen that would

not sit as she should after the first feeding. Then it took some time to go into other pens and find a bird that could be moved in the day time.

"As the nests were attended to, the hens fed and watered, there were broken eggs discovered. This called for fresh nest filling, washing of the eggs that remained whole, and sometimes the getting of a fresh sitter. One of the hard things of hatching with hens is the bowel trouble that comes from feeding injured corn to them.

More hens soil their nests, more chicks die of bowel trouble, from musty corn, than all other causes. If in any doubt as to the corn—and you cannot get other—bake it in the kitchen oven till the color of it is slightly darkened. Then cool and keep in dry box till needed."

The baking advice is excellent, but this writer has missed the most general cause of bowel trouble. It occurs

from lack of exercise in twenty cases to one of musty corn. Sitters closely confined are afflicted as described time and time again, while their flock mates not engaged in sitting, but of the same age and breed, and fed on the same corn exactly are exempt.

Study the actions of a sitter off her nest of her own will, with plenty of room to run and get up full speed, and fly to the fence top, or upon some other elevated object, and down again, and bustle around generally, and hunt up her flock for a short visit, and race back near her nest, then scamper away again. Once I thought these antics were merely manifestations of delight at respite from the irksome restraint of sitting, but I now know better. They are fraught with deep meaning like many other habits of animals. Probably hens which steal their nests do not have bowel trouble and foul their nests in one case in a thousand. I will warrant not a reader of this magazine ever knew of such a case.

#### Trials and Tribulations.

Our writer's other vexations are familiar to readers. Hens do not return to their proper nests for instance. The hen which steals her nest makes no such mistake. Her brain is loaded to the limit with thoughts about her nest, and her previous nest. She spent lots of time considering the

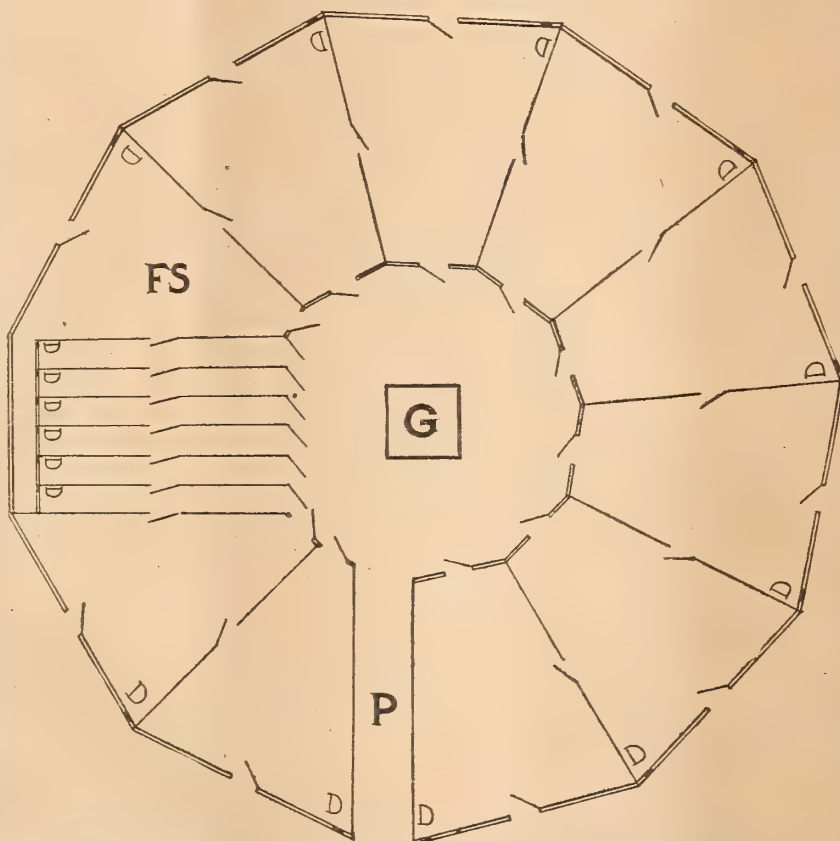

Fig. 1. Ground plan to explain improved method of managing sitting hens with convenience, certainty and labor saving. See H. H. Stoddard's article, The Value of Poultry Inventions, in this issue.

matter in the first place, and compared various localities before she laid an egg. All her actions proceed like clock work if she is not "taken off by hand" and "put back," and stirred up and confused generally. The more she is handled and made anxious about her nest, the worse she behaves. Even if she is quite a tame specimen and not nervous on ordinary occasions, she is excited when the sitting fever is on. The love for her eggs is almost as strong as love for actual chicks and all the fine program of nature is disarranged by a "brain storm."

What if some way could be contrived by which sitters could be let severely alone after eggs were assigned, all the time till hatching begins, just as if they had stolen their nests! Eureka! All fussing not only menaces success and vexes the poultryman, but takes up so much time as to mean good-by to profits.

If there ever was, in this vale of tears and world of sin and sorrow, a double-reciprocating back-action accumulator of woe, it is bad management of sitting hens, for the more you fuss with them the worse they behave and the worse you behave. The profanity department in Gabriel's book has, I'll warrant, more entries in connection with various imperfect methods of managing sitters than anything else, not even excepting hitting a thumb with a hammer.

Sometimes the very bird which will roll her eggs the best and keep them covered and attend to all things the best is so nervous as to be spoiled by fussing. When you shut a hen "on" and take her "off," waltz around, "drop corn in a pan" and raise h—ullabaloo generally she may in consequence stick to her nest days at a time till her bowels are in an abnormal state, when if she had never seen a human being after the eggs were given her she would have come off to eat every morning with the regularity of clockwork.

Contrive some way of letting sitters alone, and they will regularly air and turn their eggs and carry out the whole of nature's exquisite program just as the one which steals her nest does.

The duplicate system furnishes a way of getting around every difficulty. As originally published, it was carried out by taking three or four yards, like those at the upper right hand in Fig. 1, for instance, and fixing them up exactly alike as regards nests, and every other object in the yard. Each yard was an exact duplicate of the others. The nests were cheap boxes from the grocery store and of divers shapes and sizes, some were painted black, others white, while some were yellow or blue or red, and others left unpainted, so as to aid a layer or sitter in identifying her nest; but the assortment in one yard was exactly like that in the other yards as regards the number of nests and their size, shape, color and position. One of the yards held the main flock of a sitting breed, all supposed to be laying or getting ready to begin laying, and a few occasionally offering to sit. The idea was that if a sitter was taken from the main flock where she was offering to sit, and put into another yard she would find the same sort of nest with nest eggs ready for her in the same position, and would suppose she was in the same yard.

So closely one yard was made to resemble each of the others that the attendant himself couldn't tell which yard he was in by looking at the outfit in the yard.

When hens, say, to the number of twenty, had been shifted to a yard where they took to their respective nests of their own accord, the dummy eggs were removed, preferably by lantern light, and real eggs furnished the whole batch on the same date.

The yard had food and water always available and the twenty birds were left absolutely alone for twenty days, no harassing and confusing taking place any more than if each bird was occupying a stolen nest.

There was only one trouble so far as the incubating birds themselves were concerned, and that not a serious one, which was that when the hens came off to feed they could tell by the craking of their mates where the home flock was located and would sometimes turn in that direction and pace up and down by the particular fence. A sitter is always anxious to visit her flock mates and show off. It is hard to tell whether vanity or homesickness predominates. No harm was observed except that it seemed sometimes in cold weather that the fruitless attempt to go home made some of the birds stay off their nests too long.

But there was one very serious drawback, to wit: Where Leghorns are kept there will be apt to be around the premises somewhere some adventurers that hold a rover's commission and will get over the fence and lay in the sitter's nests.

Now for the improvement. Fig. 1 we will describe as follows: The diagram represents a set of convergent yards where the fowls in any yard go to its narrow end to be fed and watered, causing a very great saving of travel for the

attendant. The yards devoted to the incubation proposition are but six out of the whole sixteen, but are grouped with the others for manifest convenience. A granary "G" is located at center of inner court and reached by the passage "P," which is wide enough for a team. The inner court is of diameter sufficient to allow a wagon to be driven completely around "G."

The main flock of sitting breed supposed to be laying are in the yard "F S," but may be allowed outside range by means of a door "D," as is true in regard to the occupants of all the other yards.

The six narrow parallel yards are all furnished with nests in duplicate. They are narrow so as to be covered entirely across at the top, that no intruders may get in. Where I am the covering is either of wire or boards for shade laid with three inch cracks between; but farther north it should be a regular tight roof. In fact, a laying and sitting house of six rooms. Or a less number may answer in some cases, say, four or even three. Six are none too many for large scale operations.

The yard "F S" has nothing in it but roosts, food, water, etc. Its occupants will not be slow in finding the passage,

two and one-half or three feet wide, which is furnished with six doors "d." The letter "d," everywhere in the diagram, means not a regular gate but a small door, say, twelve by eighteen inches, opening upward, closing by gravity, and worked by a wire, extending to the central court. Make the flock use one of the narrow yards at a time for laying purposes. Let the hens offering to sit stay just where they are, the eggs laid to them to be removed gently by the same motions always and by the same attendant, allowing the bird perfect freedom to "get out o' there" if she chooses, or remain, while eggs are deftly taken from under her. Never catch her at all till she is through hatching. This is one advantage over the original plan.

When you have enough sitters for a batch, say, twenty, simply drop the little door "d" at the passage at sundown and next morning open another, giving access to the adjoining yard. The layers will not know the difference. In the original plan the sitters were fooled, while the flock of layers remained in the same quarters as before. In the new plan it is the layers who are fooled, while sitters continue business at the old stand.

I have found that some visitors have expressed warm approval of the convergent yard idea, but were not ready to construct a "nautilus" of so many "chambers." In other words they were contemplating having only three or

four yards. Now if there are over two yards there is a saving in travel by the wedge shape. The way is to build right as far as you go. Mark out on the ground an inner court and grade it a dead level at its outer circumference irrespective of any uphill and down in the yards. Then the fence which encloses the inner court and contains gates will be easy to make and will stand true. Now shape on the convergent pattern what yards you make, whether few or many, and have your battery of sitters' parallel yards located adjoining and accessible from the inner court as in Fig. 1. Then add other yards in a few years as you need them. The battery and yards, just as in the diagram, only smaller, will be exactly the thing for the farmer or suburban dweller with only fifty fowls, or the keeper with one hundred or one thousand or more. Only be sure, if the battery is of few

nests and on a small scale, to extend each duplicate narrow yard, or if at the north, supplement each duplicate laying room with a narrow yard long enough so that sitters will be encouraged to get up speed and run like sixty, for this matter trivial as it may seem, is of great importance.

When your sitters attend to themselves, and absolutely nobody enters their yard for twenty days, you supplying food and water from the inner court without stirring from your tracks, spending not an iota more than, on an average, one-twentieth of a minute per day on twenty sitters with three hundred eggs, and have big hatches of chicks, with a kick like a mule; as I am doing over and over and everything lovely, you will, intelligent reader, who can see through a ladder, then add battery after battery and will be as happy as I am.

## "The Care of the Egg Farm"

Review of an Important Bulletin Recently Issued by United States Department of Agriculture and Comment *By Prince T. Woods, M. D.*

THE CARE OF THE FARM EGG" is the title of an important bulletin (No. 160) issued by the Bureau of Animal Industry, United States Department of Agriculture, May 3, 1913. It was prepared by Harry M. Lamon and Charles L. Opperman, of the Animal Husbandry Division after careful scientific investigations covering several years. Copies of this bulletin may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C., at 15 cents per copy.

While much that is contained in this bulletin is only scientific confirmation of views repeatedly expressed by experienced producers of market eggs, it is none the less important and it should be read by every poultryman who sells eggs for table purposes, and particularly by farmers, and buyers who collect farm eggs. We quote the following from an introductory note by Chief George M. Rommel, of the Animal Husbandry Division, whose statements, prefacing the bulletin, are plainly put and forceful:

"The egg investigations of 1910, which brought about the inauguration of the 'loss-off' or quality system of buying eggs in Kansas, resulted in marked improvement in the quality of the eggs marketed from that State. The work of 1911 was devoted to keeping up the interest in the movement and to the study of the effect of farm conditions on the keeping quality of eggs, the results of which are presented herewith. The 1910 work emphasizes the effectiveness of organization as a means to improve the egg output of a community; the work of 1911 shows how the farmer may assure himself of maximum returns for his eggs by taking proper care of them and by proper management of his flock.

"While the 1911 work was not, as some claim, a 'discovery' of the superior keeping quality of the infertile egg, the authors deserve the credit for focusing public attention on the fact. Of the loss of \$45,000,000 or more in the annual value of our egg crop, due to poor quality, at least one-third, or \$15,000,000 is due to 'blood rings.' A blood ring is caused by the development of the embryo of a fertile egg subject to heat and its subsequent death. No embryo can develop in an infertile egg, no matter how long it may be subjected to heat, because it is not fertile. Therefore a blood ring is impossible in the infertile egg; and by the removal of male birds from the flock as soon as the hatching season is over, and the segregation of young cockerels, no loss from blood rings will be experienced.

"Unless cooled at once and kept cool, a fertile egg will spoil in hot weather almost as quickly as raw milk, and the purchaser of fertile eggs, even on the 'loss-off' basis, whether he be the country-store merchant, the packer, or the consumer, has no assurance whatever against more or less loss. AN INFERTILE EGG WILL KEEP; A FERTILE ONE WILL NOT. It therefore does not require a great stretch of the imagination to realize what effect the country-wide production of infertile eggs would have on our food supply.

"Some of the loss due to 'rots' and 'spots,' as shown in this bulletin, is CAUSED BY CONTAMINATION IN THE NEST and is largely, if not entirely, PREVENTABLE. Both fertile and infertile eggs may be damaged in this way, although infertile eggs are less susceptible than fertile ones." (The capitals are ours.—Editor.)

In commenting on the millions of dollars lost each year

as a direct result of haphazard methods of production, marketing and shipping, Messrs. Lamon and Opperman say:

"The greatest part of the loss is due mainly to ignorance or indifference on the part of the farmer and producer, and only a small part is caused by carelessness on the part of the buyer and shipper. In many instances the buyer is indirectly responsible, for when he buys eggs by the case-count system, as many of them do, he is encouraging the producer to be careless in gathering and marketing eggs, since he pays him for anything that has an intact shell. The conscientious producer, however, will not try to shield himself under this pernicious system, so it is very much to his advantage to aid in the improvement of the commercial egg. He may not receive any extra compensation at the very start, but just as surely as he makes an organized effort to furnish the trade with strictly fresh eggs, so surely will the competition in trade make it possible for him to dispose of his superior product at an increased profit."

In other words, as practical men have recommended for a long time, IT PAYS TO GRADE YOUR EGGS ON THE HOME PLANT BEFORE MARKETING. Produce infertile or STERILE EGGS from well-fed, well-cared for hens. Grade all your eggs according to quality and don't mix the different grades in same case. Market your eggs often. Common-sense care and attention to detail in delivering quality goods is certain to PAY BETTER RETURNS eventually. The advice is not particularly new, but IT IS GOOD and it has been little heeded by the majority of producers.

### The Grading of Eggs.

We quote the following from the chapter on grading eggs in the Lamon-Opperman bulletin:

"Where eggs are handled in large quantities there are certain grades by which they are sorted and either retained for market purposes or rejected as useless. A brief description of these grades and the characteristics by which they are detected is given below.

"**Fresh Eggs.**—An egg to be accepted as a first class, or fresh egg, must be newly laid, clean, of normal size, showing a very small air cell, and must have a strong, smooth shell, of even color and free from cracks. With the exception of the air cell, which is only visible through the aid of the candle, these are the points by which eggs are graded in the early spring, at which time they are quite uniform in quality, thereby making candling unnecessary.

"**Checks.**—This term applies to eggs which are cracked but not leaking.

"**Leakers.**—As indicated by the name, this term applies to eggs which have lost a part of their contents.

"**Seconds.**—The term 'seconds' applies to eggs which have deteriorated to a sufficient extent as to be rejected as firsts. They are, however, of a high enough quality to be used for human consumption. The several classes of eggs which go to make up this grade may be defined as follows:

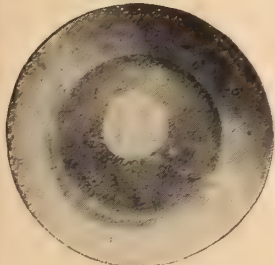

"(a) Heated egg: One in which the embryo has proceeded to a point corresponding to about 18 to 24 hours normal incubation. In the infertile egg this condition can be recognized by the increased color of the yolk; when held before the candle it will appear heavy and slightly darker than in the fertile egg.

"(b) Shrunk egg: This class of seconds can be easily distinguished by the size of the air cell. It may occupy from one-fifth to one-third of the space inside the shell. The holding of eggs for a sufficient length of time to allow a por-

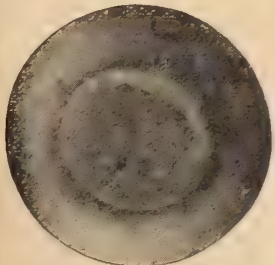

# ATTENTION \* FARMERS

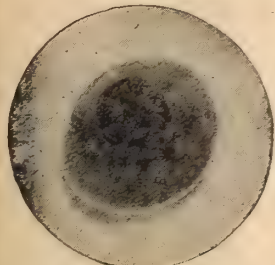

## PRODUCE INFERTILE EGGS \* PREVENT LOSS FROM BAD EGGS

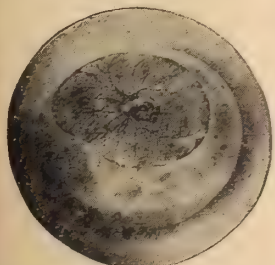

2. Fertile egg after 24 hours of incubation.

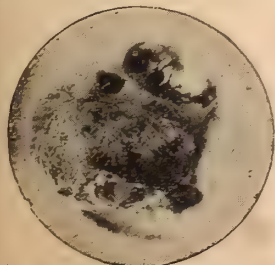

4. Fertile egg after 36 hours of incubation.

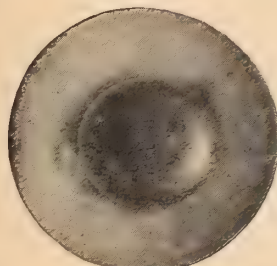

6. Fertile egg after 48 hours of incubation.

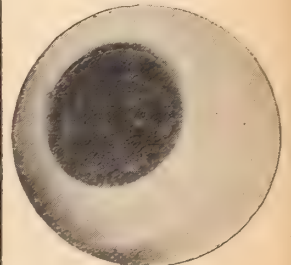

8. Fertile egg after 72 hours of incubation.

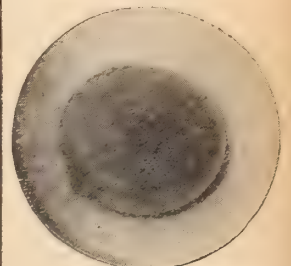

10. Fertile egg after 7 days of incubation.

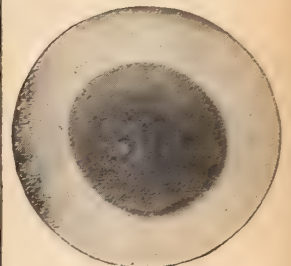

1. Fresh egg.

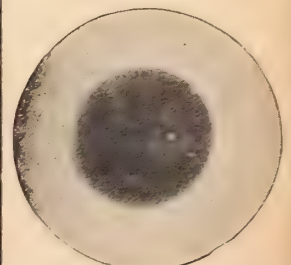

3. Infertile egg after 24 hours of incubation.

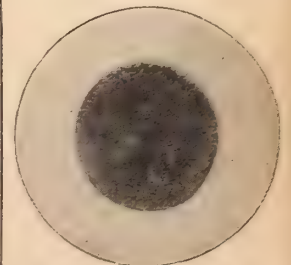

5. Infertile egg after 36 hours of incubation.

7. Infertile egg after 48 hours of incubation.

9. Infertile egg after 72 hours of incubation.

11. Infertile egg after 7 days of incubation.

The loss to the farmers of the United States from bad methods of producing and handling eggs is estimated at \$45,000,000 annually.

IT IS ALSO ESTIMATED THAT \$15,000,000 OF  
THIS LOSS IS DUE TO BLOOD RINGS.

Every dollar of this loss from blood rings is directly preventable on the farm.

Blood rings are a certain stage of chick development in the egg.

Heat develops the germ until it becomes a blood ring. (See Figures 4, 6, and 8.)

Blood rings often develop in the nest and in an unheated room in the house during the hot summer weather. (See Figures 4, 6, and 8.)

Blood rings can not be produced in the infertile egg.

Blood rings are troublesome only in hot weather.

Infertile eggs are eggs laid by hens that are not allowed to run with a male bird. (See Rule 5, below.)

A study of these pictures should quickly convince one that the infertile egg is the quality egg; therefore, produce it, by removing the male birds from the flock, and realize more money for better eggs. The removal of the male birds has absolutely no influence on the egg production.

### RULES

Farmers are urged to adhere strictly to the following rules in handling their poultry and eggs:

1. Keep the nests clean, provide one nest for every four hens.
2. Gather the eggs twice daily.
3. Keep the eggs in a cool, dry room or cellar.
4. Market the eggs at least twice a week.
5. Sell, kill, or confine all male birds as soon as the hatching season is over.

### NOTICE

Information on the care of poultry and eggs may be had by writing to the Bureau of Animal Industry, U. S. Department of Agriculture, Washington D. C.

Secretary.

Washington, D. C., July 10, 1912.

tion of the contents to evaporate is the main cause of this condition.

"(c) Small egg: Any egg that will detract from the appearance of normal eggs on account of its small size will come under this class, although it may be a new-laid egg.

"(d) Dirty egg: Fresh eggs which have been soiled with earth, droppings, or egg contents, or badly stained by coming in contact with wet straw, hay, etc., are classed as seconds.

"(e) Watery egg: Those in which the inner membrane of the air cell is ruptured, allowing the air to escape into the contents of the egg and thereby giving a watery or frothy appearance.

"(f) Presence of foreign matter in eggs: Small blood streaks or clots. This condition is found in many fresh-laid eggs. Often eggs are laid which show small clots about the size of a pea. These are sometimes termed 'liver' or 'meat' spots.

"(g) Badly misshapen eggs. Eggs which are extremely

the smell. It is also known as the 'mixed rot.'

"(c) Spot rot: In this case the foreign growth has not contaminated the entire egg, but has remained near the point of entrance. Such eggs are readily picked out with the candle, and when broken show lumpy particles adhering to the inside of the shell. These lumps are of various colors and appearances. It is probable that spot rots are caused as much by mold as by bacteria, but for practical purposes the distinction is unnecessary.

"To all intents and purposes the spot rot as explained above is practically the same as the brown and black spots described under the general head of 'Spots.' The spot rot is also placed under the general head of rots simply because some candlers will call it a spot, while others designate it at a spot rot. Pink and blood rots are names which are also applied to certain classes of rotten eggs, the pink rot deriving its name from the peculiar pinkish color of the contents when held before the candle. The same thing is true of the blood rot, which is bloody or red in appearance."

#### The Experiments.

We haven't time and space to go into details concerning the experimental work reported in this bulletin. Those who are interested will find the data published by Messrs. Lamon and Opperman worth while reading. An effort was made to plan the work so that tests would show the deterioration taking place under actual conditions on farms, in country stores and during transportation. The work was done in a practical and painstaking manner. Only fresh-laid eggs were used in the tests and of these some 10,000 were used.

Six classes of eggs were used: "Clean fertile, dirty fertile,

long or very flat, or in which part of the shell's surface is raised in the form of a ring; in other instances a number of hard wart-like growths appear on the outside of the shell.

"Spots.—Eggs in which bacteria or mold growth has developed locally and caused the formation of a lumpy adhesion on the inside of the shell. There are three well-recognized classes of mold spots, namely, white, brown, and black. In cases where an infertile egg has been subjected to natural heat for a sufficient period of time, the yolk will often settle and become fixed to the membrane. This condition might be termed a 'plain spot.'

"Blood rings.—Eggs in which the embryo has developed to a sufficient extent so that it is quickly recognized when held before the candle. It has been found that it requires between 24 and 36 hours of incubation under a sitting hen to produce this condition.

"Rots.—Eggs which are absolutely unfit for food. The different classes of rots may be defined as follows:

"(a) Black rot: This is the easiest class of rots to recognize and consequently the best known. When the egg is held before the candle, the contents have a blackish appearance, and in most cases the air cell is very prominent. The formation of hydrogen-sulphid gas in the egg causes the contents to blacken and gives rise to the characteristic rotten-egg smell, and sometimes causes the egg to explode.

"(b) White rot: These eggs have a characteristic sour smell. The contents become watery, the yolk and white mixed, and the whole egg offensive to both the sight and

washed fertile, clean infertile, dirty infertile, and washed infertile. Clean fertile eggs were normal fresh eggs produced by the farm flocks, on free range, with several mature male birds present during the entire season. Dirty fertile eggs were fresh ones from the same flocks, but which before entering the experiments were artificially dirtied with barnyard mud to conform as nearly as possible with the natural dirty egg. Washed fertile eggs were fresh eggs from above flocks which were thoroughly washed previous to being put in the experiments. In washing the eggs they were allowed to remain in a basin of water for a few moments and immediately dried with a towel. It is the general opinion that washed eggs do not keep as well as unwashed, and it was to determine this point that these eggs were used.

"The three classes of infertile eggs used were identical with the fertile eggs, with the exception of being produced

by flocks where the male birds were removed three weeks previous to using the eggs."

This last class of eggs did not enter experiment until June as it was aimed to attain farm conditions and was reckoned that the farmer could not dispense with services of male before three weeks prior to June 1st. Also late in season the "infertile" eggs used in tests did not run 100 per cent sterile, as should be the case on an egg farm where no males run with the market egg layers. The reason given for this was the activity of developing young cockerels in farm flocks on free range late in the season and the obvious fact that a farmer desiring vigorous cockerels would grow them on range rather than confined. Therefore the tests made allowance for such conditions.

The keeping quality of eggs was tested in ordinary unheated farm house parlor, for best living room conditions, in cyclone caves, in cellars and under common country store conditions. Tests were made with eggs in nests under corn cribs, in straw stacks, in ordinary nests, in stolen nests and in nests occupied by both layers and broodies. Transportation conditions covered a 10-hour journey in ordinary car for 78 miles and a delay of 12 hours in car previous to starting on journey. At packing house usual conditions were observed. All eggs were marked and dated, which made collection of accurate data easy and complete re-made collection of accurate data easy and complete records were kept.

A room in dwelling house was not found to be a desirable place for storing eggs in warm weather. Most farms were found deficient in desirable storing places for fresh-laid eggs. The clean and well-aired cyclone cave or the clean, dry, well-aired cellar (a very unusual cellar, by the way, on most farms) were found to be the best places for storing eggs on farm. Under most favorable conditions marketing twice a week, at least, is recommended.

Damp cellars where there is any mold are very undesirable and much more unsatisfactory than an unheated living room in house. Of course the clean, well-aired milk room of a modern farm-house basement, would make the best place for home storage.

Layers on nests in laying houses caused almost as much deterioration of eggs, from staying on nests, as did broodies managed in usual manner. Where eggs are removed from nests at least once daily, or more often, and where broodies are promptly "broken up" the loss from such source is small with fertile eggs and of course less with infertiles.

From house tests it was decided that an unheated room in dwelling is not as good a place as a cyclone cave or dry unheated cellar for storing eggs. The infertile eggs came through test in best condition. The keeping qualities of the three classes of fertile eggs was about the same. To realize best returns the producer is advised that he cannot afford to keep eggs in the house in warm weather.

In cellar and cave tests the clean and washed fertile eggs compared favorably with the same classes of infertile ones while in the cave, but deteriorated more rapidly during transportation.

The washed egg tests were negative in results. Under like favorable conditions the clean, washed and dirty fresh-laid eggs proved up about the same. It was not shown that washing injured the eggs. This, however, was not considered to show that eggs might not be injured, under longer periods of storage, if bloom had been destroyed by washing prior to storage. The market will not accept washed eggs at first quality fresh egg prices.

Eggs from straw-stack nests showed a large percentage of blood rings and some eggs exposed in a straw-stack nest during a very hot week (July 1 to 8), on examination at packing house were found to be cooked so hard that the albumen could be cut with a knife without running.

Weed nests on the ground showed heavy losses from blood rings and rots. Eggs from stolen nests showed losses from deteriorated eggs. The losses in tests with fertile eggs was nearly twice that with infertile ones.

In temperature tests eggs were found to deteriorate rapidly under any temperature 88 degrees F. or above. Fertile eggs under hot weather conditions deteriorate so rapidly as to show, when overheated, a 40 per cent depreciation into seconds in 24 hours, 40 per cent total loss in four days and 100 per cent loss on fifth day. Infertile eggs under like conditions show 20 per cent seconds in 24 hours and after fourth day 100 per cent are seconds, but in no case is the deterioration so great as in fertile eggs. Our recommendation would be to keep eggs in hot weather where the temperature does not rise above 65 degrees F., and preferably not above 50 degrees F. It is easy to understand the considerable depreciation which must occur through handling in hot stations and cars during transportation, cases sitting in the sun, and eggs displayed in sunny store windows.

### Summary.

The extensive experimental work reported in the bulletin and from which conclusions are drawn was conducted in the State of Kansas under different farm conditions. The authors summarize the results as follows:

"1. Eggs kept in the cyclone cave proved much better in quality than those kept under other conditions.

"2. Taking the season as a whole, an unheated room in a dwelling is not conducive to good quality in eggs.

"3. During the hot summer months the conditions surrounding the weed nest, the nest in the straw-stack, or under the corn crib, and the stolen nest, as well as the keeping of eggs in the house, favor the production of spots, blood rings and rots.

"4. The greatest deterioration in fertile eggs occurred in the experiments which included a certain amount of natural incubation, namely in the nests for layers and the stolen nest experiments.

"5. The straw-stack experiment gave the greatest number of spots, both in fertile and infertile eggs, and also the highest percentage of rots in the latter class of eggs. It was the test in which a large number of infertile eggs deteriorated to such an extent as to be unfit for food.

"6. In fertile eggs the development of the embryo after 24 hours of incubation was of sufficient proportion to be recognized when held before the candle, and at the expiration of 36 hours the presence of blood was easily detected. In infertile eggs under the same conditions a slight shrink

A flock of Single Comb White Leghorns on the farm of R. J. Elliott, Mansfield, Ohio.

age of the contents was the only change which could be recognized by the eye.

"7. INFERTILE EGGS, regardless of where they may be kept, ARE MUCH MORE RESISTANT TO DETERIORATION than fertile.

"8. Two-thirds of the total loss in fertile and infertile eggs takes place on the farm. The basic factors responsible for this condition are the haphazard methods of poultry management on the farm.

"9. If eggs are fresh when delivered to the buyer it is impossible, with present methods of transportation, for them to reach the packing house without showing a slight deterioration in quality. The data at hand would indicate that this loss is about 12 per cent of the original value of the eggs.

"10. The results of all experimental work point to the fact that the production of the infertile egg is the greatest asset in the attempt to produce high-quality market eggs during hot weather.

"11. The authors believe that if the five simple rules given below are followed by egg producers generally a high quality of product will be assured and a very large part prevented of the loss now experienced in the value of the country's egg production:

"Give the hens clean nests.

"Gather the eggs at least once daily.

"Keep eggs in a cool dry place.

"Market eggs at least twice a week.

"Kill or sell all mature male birds as soon as the hatching season closes."

# A Reply to Mr. Holden on Campines

Dr. J. H. Prudhomme, Thurmont, Md., Takes Exception to Statements Made by Mr. Holden in April Issue of the American Poultry Journal

HAVING had some experience with poultry, and having bred the Belgian Campine and improved Silver Campine, and more having given much time and much thought to this breed I would like to have a few words to say in reply to Mr. Holden's article on Belgian Campines in the April issue of American Poultry Journal.

Perforce I must say that this gentleman's harangue on the Belgian bird, figuratively speaking, must remind one of the Roman gladiator, who having lost his turn receives the turned down thumb of the King, and realizing he must lose his life he bursts out in an impassioned oration venting his spleen on the public, on the King and everything in general. In this case the gladiator is the Belgian Campine, its mouth-piece, Mr. Holden, the King is represented by the people who have repeatedly in this country and in England turned down the Belgian Type Campine, but in its last stand through its American mouth-piece, Mr. Holden, its impassioned oration is declaimed.

Now, I shall not take it upon my own authority to make direct reply to the charges against the Improved Campines as mentioned by Mr. Holden but I shall quote from the best authorities on Campines and I shall rest the case with the erudite, intelligent, reading public for its deduction and final judgment.

It is most fitting and proper that I quote you first from "the father of Campines," the Rev. Lewis Jones of England. I believe Rev. Jones is recognized as the originator of the Improved Campines. In regard to the egg-laying abilities of the Improved Campines, he says: "The Parent stock hens have a long egg-laying pedigree, and I may as well say here that the English Campine has gained rather than lost in egg-laying power since its introduction into England. It has gained for we have bred for the character of egg-laying just as we have bred for the improvement of markings of feathers. I say this because at present certain people in England and abroad delight in libelling the English Campine. It passes my comprehension why they should thus bear false witness against the bird as they persistently do. Not only have we improved the prolificacy of the bird, but we have more than maintained the size of the egg."

Rev. T. W. Sturges, M. A., president of the English Poultry Club and of the Campine Club, says of the Improved birds: "We who breed it know well that it deserves all the good things we can say of it: . . . Like the child we love, we feel that no dress can be too fine for it. It would grace them all. No veil of delicate lace could be too pure in color to adorn its shoulders, and no girdle of finely woven silvery tracery too beautiful for its waist. It is such a robust, yet withal dainty little thing, that it is worthy of our best efforts. Besides all this it is so useful. If you keep, as I do, a dozen varieties or breeds of poultry, don't forget to tell your neighbors that those clean-looking, bright, pure white eggs of such a magnificent size, come from the Campine. They beat their gigantic neighbors, the Cochin, Braham, and Wyandotte into fits for size, and what is more, they lay two of them where most of the others lay one. Moreover, they take less food to produce them. As to winter laying they do as well as any breed. One fact alone will testify to this—I have this year, pullets hatched in the end of April and beginning of May, 1911, that laid well in Nov. and Dec. and what is more, I got a strong brood of chix from their eggs, which hatched out on New Years Day, 1912."

Now, I shall quote you from Miss Carey. Miss Carey is interested in the popular breeds, the paying breeds, the live ones not the dead ones. Why does she sing the praise of the Improved Campine? There is a reason, here it is, she says:—"Another breed fast booming in England is the Campine especially the Silver variety." Read carefully, please, especially, you, Mr. Holden. "It is now well known by most to be a breed of Belgium origin, although as with the White Faverolle, these new varieties are purely English, carry an English Standard quite apart from the original standard from which they were in course of time evolved and are now distinct English breeds formed to meet the demands of modern times and conditions and above all to abolish that system of double

mating that has ruined the popularity of almost every breed that has suffered from its curse."

For further elucidation and information to those who are not so well posted on the material differences of the types it is essential that I quote Miss Carey further for which privilege I beg permission from the editor, whom I will remind that it takes but a tiny spark and but a moment's time to cause a great conflagration, the extinguishing of which requires much time and labor.

Miss Carey further says: "The Belgium male differs chiefly in the plumage, the pure white of the neck and the hackle being carried down the back and to the saddle or shawl. This feature gives the bird a weak or pale appearance and in consequence lost to the breed a good deal of popularity that was won for it by the pullets with their bright, clear, sharply defined barring throughout."

"Some years ago a few leading English breeders realizing the promise the breed held, decided to break away from the Belgian breed, dispense with double mating, and produce a variety that permitted the male to carry the same clear, sharply defined barring throughout the body as the female. . . . The new variety has now been brought to a state bordering on the entire conquest of the old traits, and their appearance met with success that surpassed all anticipation. . . . In a flock there is nothing probably so attractive to the fancier as a flock of some hundred Silver Campine pullets put together for laying, and as money makers, the profits they can turn out is extraordinary."

If you please I shall now quote you from Mr. Frank L. Platt, the American authority on Campines. Since the advocates of the Campines have sought out the best to give America a new class of egg-machine, Mr. Platt has taken up their cause, has earnestly studied them, has traveled into their native Belgium and Wales to see where they began their progress. He says: "The Campines are pretty birds, but it was not until about 1865 that any attention was paid to breeding them for feather and form. A Mr. Van Horn, who was station master at St. Leirre at Turnhout, Belgium, made a hobby of the Campines and during thirty consecutive years was engaged in breeding and improving the Campine breed. He gave the peasants eggs, often his best cocks and even his pullets, thus improving their stock from the fancier's viewpoint—making it more desirable and valuable. . . . It was this stock that was imported into England and exported into America. They were admitted into the American Standard of perfection, and appeared in the edition of 1894. The back description of the male called for a white saddle. These white topped males were white in the wing bow and white in the wing bay. They were shown in New York in the early nineties. It was before the present day of high cost of living and the productiveness of the Campine failed to secure for it a permanent place in America. In England the fowl was more favorably accepted and received an initial boom. The Campine club of England was formed in 1899 and in 1902 had a membership of 77. However, the call for stock birds and eggs for hatching necessitated the wholesale importation of birds from Belgium and these imported birds failed to satisfy the fastidious English fanciers. Naturally the fowl failed to prove up and drifted out."

Notwithstanding the highest authorities, Mr. Holden is still holding out for the antiquated Belgian type Campine. Read carefully the following from Mr. Platt: "In England the revival of interest in the Campine dates back about five or six years, when the hen-feathered stock began to command attention. This new type was not received without strenuous objection from those who, having been fortunate enough to have some of the best stock, were faithful to the breed and championed the white top color of the males." Listen, "however, the hen-feathered type of male prevailed."

"In America there had been a void between the departure of the old and the arrival of the new Campine. The first hen-feathered Silver Campine male appeared in 1904 and with it a plumage more flattering to the eye was created and the depression was replaced by greater enthusiasm, competition was stimulated by the keen desire to obtain the advanced type and a new lease of life was given to the Campine fancy of Britain."

"The new Campine, while in name Campine, is in blood half Braekel."

Mr. Holden would have you believe the Improved Campine is a "four-flush cross-breed." When I get thru quoting Mr.

Platt you will know what is what, and I fear Mr. Holden will show more of the "four-flush-cross" in his unfounded argument than there ever was in the Improved Campine.

The trail is hot, you will find that the Improved Campine originated right in the home of the Campines. Quoting Mr. Platt: "The first hen-feathered cock came from the yards of Mr. Oscar Thomas, Renaix, Belgium. Renaix is in southeastern Belgium, near the French border and it is in this district that the Braekel chicken is grown. This cock was exported to England and there bred for the sake of the new fashion which it had set."

"The Braekel may be said to be the backbone of the new Campine. Crossing has been easily possible and quite practical. The Braekel contributed some good qualities to the new Campine.

"This Braekel in Belgium lays a larger egg than its sister,

the Campine. It gave to the new Campine more neat qualities, for the Braekel is a delicious table bird and much larger than the industrious little Campine that one sees on the sandy plains of La Campine."

Mr. Holden says: "The statement concerning the make up of the 'Improved Campine' has no foundation whatever. . . . there is no difference between the Campine and the Braekel, etc., etc." When we compare this gentlemen's assertions along side of recognized authorities there is a big question mark that looms up to be placed.

I could go on quoting authorities upon authorities in refutation of each and every statement that Mr. Holden makes, but I shall rest the argument as the matter stands, and I shall let the public draw its own conclusion.

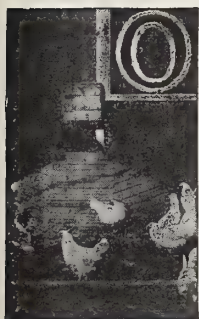

DR. J. H. PRUDHOMME.

Thurmont, Md.

# Popularity of the White Orpington

Some of the Many Reasons Why the White Orpington Has Become So Popular in America

By Louis Lee Haggin, Lexington, Kentucky

NE of the greatest proofs of the popularity of the White Orpington is its great adaptability to all climates. We hear of its doing well in all localities; as far north as Alaska, in the Tropics, South Africa, South America, and, in fact, in every section of the world where the white man is. I know of no breed that can acclimate itself as readily as the White Orpington. This has, without doubt, made it the most popular of all standard breeds of poultry. However, it is needless to say that some localities are superior to others for rearing and breeding stock. Ever

since Daniel Boone started the first settlement in Kentucky the state has been recognized as the nursery for all forms of thoroughbreds. It is not necessary to mention the great race horses, both thoroughbred and standardbred, born and reared on our wonderful natural acres of blue grass. The same is true of cattle, hogs, and not least, poultry. I attribute my success greatly to the blue grass pastures of my poultry yards, and believe no other breeder anywhere in this country has the natural advantages of so great a climate, acres of virgin sod, and the best of water with ideal drainage. Therefore, I make the statement without fear of contradiction that the South, in the near future, will be the foremost section of the world in producing all forms of poultry. However, it has been difficult throughout the southern states to make the farmer realize the great opportunity he is losing in not considering the importance of caring for and rearing the greatest of all breeds of poultry, the White Orpington, but he at last recognizes its great points of merit—splendid table qualities and wonderful egg production.

A dual-purpose animal always has been in great demand by all thinking breeders. The thoroughbred horse, probably one of the greatest accomplishments of man's brains in breeding, is one of the best examples; an animal of great speed and great endurance, and one bred to carry weight. The Jersey cow, a large milker with a very large per cent of butter fat, has always been selected by the careful breeder. Now, a no less wonderful production of man than these is the White Orpington. No one contradicts the claim in regard to its table requirements, and the proofs of its great qualities as a layer can be found in authentic tests, as it is not necessary any more to have to be governed by the statements of any breeder, but one can get records of their laying from Australia or from two experiment stations in this country running yearly tests. I am more than pleased to refer you to the record of my ten pullets at the Missouri National Egg-Laying Contest, now being held at Mountain Grove, Mo., by the Missouri Experiment Station, and the winning of the cup for February by the ten birds laying the greatest number of eggs during that month, I believe proves conclusively that I have not forgotten in their breeding the most important of all qualities, and I am more than satisfied that they have proven their winter laying qualities.

The question of breeding White Orpingtons will probably interest more breeders and beginners than any other subject that one might discuss. The knowledge that I have gained in regard to breeding all forms of stock I have arrived at through hard reading, lots of thought, and in asking ques-

tions of all breeders that I knew, and being in Kentucky could more easily get opinions from noted breeders than in any other part of the country.

The breeding of chickens is, however, to a great extent different from the breeding of horses, cows or hogs, and I honestly believe that to mate a breeding pen that will produce numerous great chicks is more difficult than to breed a great race horse or a cow that has a great milk test. This statement may surprise a great many beginners, as they will consider the breeding of chickens not a very difficult subject to master. However, it is true on account of the great factor of atavism, which plays such an important part in the breeding of any form of animal. Atavism is the throw-back to some forefather, and when one takes into consideration how few pedigrees there are at the present time in poultry, one must realize that a bird must throw back to a large per cent of forefathers that the breeder knows nothing of. Unfortunately, there are very few pedigrees that will show any bird for four generations, while a horse or a cow can be traced for many times this number. This is a great aid to the breeder of the larger animals, for, by referring to his stud book and studying the pedigrees, making notes of the forefathers, and breeding for points that he wishes, he can expect a fairly good individual showing of the points that he is looking for. But the breeder of White Orpingtons is handicapped at the start in not being able to refer to a stud book, and cannot tell what to expect or what to guard against in the weaker points of the forefathers.

Many breeders of White Orpingtons keep an accurate pen pedigree. By a pen pedigree I mean marking chicks from certain pens, but these are, in my estimation, very dangerous beginnings of what must be the starting of a great stud book. Take an ideal breeding pen of eight females and a male, and even if it were mated up with eight full sisters, the pedigree of which was known for four generations, to a male, the pedigree of which was also known, a great many people would consider that the chicks from this mating should to a great extent approach the ideal that they are working for. Unfortunately, I do not think that this is the case, as it is only too easy to prove by referring to any stud book and noting the breeding powers of full sisters or full brothers. Full sisters do not necessarily breed the same nor do full brothers. Very often the dam or the sire that is not nearly so close to the ideal as its brother or sister will prove the greatest breeder. I am only considering this in detail to impress how necessary it is to keep an accurate record by trapnesting and careful marking. When a breeder plans to raise hundreds of birds in the year this may not seem very practical, but I do believe that it is practical, and the only way to show that this can be a success is to mark a large per cent of individual matings each year from one's best pens. I think you must agree with me that pen markings are hardly worth the labor except to prove the quality of the breeding power of the male, and there is only a dangerous trap in regard to the females, but that individual markings should and must be the eventual outcome of successful breeding of any animal.

There is a vast difference of opinion in the minds of breeders throughout the country in regard to the importance of the male or female. Many believe that the sire plays the most important part in the production of a mating, and to a great extent, I agree, but I really do not think that the

female is considered as important as it should be. The more one studies pedigree the more one must be convinced that there has never been a great individual raised from a great sire and a poor female. By a great individual I mean a bird that can head a pen and his chicks will show a marked improvement and can also head a breeding pen that will show an improvement. If it were only necessary to consider the sire in regard to breeding, it would not be long before all forms of stock would show a wonderful advancement.

In my experience in breeding White Orpingtons I have found that the female must be a large, vigorous bird, and should be strong in the sections in which the male is weakest, otherwise the chicks will not show any noticeable improvement, and I believe that if most breeders would aim

to improve their females, the development of the breed would be much greater. I urge the breeders of White Orpingtons to keep accurate records of individual matings, to aim to improve their females, breeding from large, vigorous, good-colored birds, and I feel sure that the next three or four years will show a great improvement in the White Orpingtons in the section that they are now weak in. The question of color, size, etc., of course, does not play the most important part, as the real value of any breed of poultry is its claims to the utility clauses—great layers, and large, full-breasted birds of table qualities. There is also this point that should always be borne in mind by all breeders; any breed of poultry can be ruined that is bred solely for feathers.

## Report of National Egg-Laying Contest

Up to May 1 the Hens Had Averaged Fifteen More Eggs Each Than Last Year for the Same Period—English Pen of White Leghorns is Still Gaining Steadily

IT NOW BEGINS to look like most of the pens in the National Egg-Laying Contest at Mountain Grove, Mo., are going to make really creditable records. No records are being broken. However, every hen in the contest but nine has laid, and they all seem to be doing their best. No individual or pen record is extremely high, but up to May 1 the hens had averaged 15 eggs each more than for the same period last year. The English pen is still gaining a little each month over the American pens. Some suggestions as to the reason for their record and their lead

over the American pens are discussed in the latter part of this report. A Buff Wyandotte hen, No. 600, from Maryville, Mo., holds the record for April by laying an egg every day during the month. The hens are eating more feed than last year; especially is this true of the dry mash. Pen No. 26, Buff Wyandottes, laid 240 eggs during the month, an average of 24 eggs per hen for the 30 days, and won the silver cup for this month. Twenty-four pens laid over 200 eggs each during the month of April. Three hundred and sixty-seven hens laid more than 20 eggs each during the month. Out of the 700 hens over half of them laid more than 20 eggs each in 30 days, in spite of the fact that 195 hens had to be broken from broodiness.

The ten leading pens have made the following record for the first five and a half months:

	Eggs.
Pen No. 2—S. C. White Leghorns, England.....	1,117
Pen No. 23—Silver Wyandottes, Illinois.....	948
Pen No. 57—Black Langshans, Missouri.....	914
Pen No. 19—Silver Wyandottes, Iowa.....	914
Pen No. 33—Barred Plymouth Rocks, Illinois.....	865
Pen No. 49—Black Langshans, Missouri.....	850
Pen No. 56—White Orpingtons, Kentucky.....	846
Pen No. 20—White Wyandottes, Arkansas.....	842
Pen No. 58—Buff Orpingtons, Missouri.....	836
Pen No. 30—Buff Wyandottes, Vermont.....	832

The ten highest pen records for the thirty days in April were as follows:

	Eggs.
Pen No. 26—Buff Wyandottes, Missouri.....	240
Pen No. 11—Black Minorcas, Iowa.....	233
Pen No. 1—Anconas, Missouri.....	231
Pen No. 2—S. C. White Leghorns, England.....	227
Pen No. 9—S. C. Brown Leghorns, Missouri.....	225
Pen No. 40—R. C. Reds, Missouri.....	224
Pen No. 44—White Plymouth Rocks, Wisconsin.....	224
Pen No. 55—Black Orpingtons, Ohio.....	221
Pen No. 56—White Orpingtons, Kentucky.....	219
Pen No. 53—Black Langshans, Indiana.....	218
Pen No. 32—White Plymouth Rocks, Missouri.....	218

The following ten hens have made good records for five and a half months, including the winter months. Their total record to May 1 was as follows:

	Eggs.
Hen No. 66—S. C. White Leghorn, England.....	141
Hen No. 860—Buff Wyandotte, Vermont.....	136
Hen No. 600—Buff Wyandotte, Missouri.....	133
Hen No. 735—Black Langshan, Missouri.....	133
Hen No. 62—S. C. White Leghorn, England.....	126
Hen No. 65—S. C. White Leghorn, England.....	126

Hen No. 871—White Wyandotte, New Jersey.....	123
Hen No. 656—White Wyandotte, Arkansas.....	123
Hen No. 61—S. C. White Leghorn, England.....	123
Hen No. 601—Silver Wyandotte, Iowa.....	122
Hen No. 857—Buff Wyandotte, Vermont.....	122

### The Feeding Test.

The pen which has feed of all kinds before them at all times leads in this test, and has laid 790 eggs. Then follows the Canadian method with 765 eggs; grain feed in automatic feeders, 724 eggs; Maine method of feeding, 708 eggs; and on down to 481 eggs. The strange part of the experiment so far is that the Egg Farm method of feeding has given the poorest results. This pen is being fed mash and grain, as recommended by one of the large egg farms of the east. They also are fed mustard bran in the mash, as recommended by this farm.

### Pen No. 65, Saylor Method of Feeding.

Dry mash—

- 15 pounds ground alfalfa meal.
- 15 pounds cornmeal.
- 15 pounds ground wheat.
- 15 pounds gluten meal.
- 15 pounds ground oats.
- 10 pounds ground oilmeal or high-grade beef scrap.
- 15 pounds wheat bran.
- 1 25c box Saylor's Poultry Powder.

The above dry mash is fed in hoppers. Three times a week we feed the dry mash in a crumbly form, to which we add one-fourth teaspoonful of Saylor's Poultry Powder to every five fowls. After the third week we reduce the moist mash to once a week. To keep them in a healthy condition every fourth or fifth week we feed this mash again for a week, adding one-fourth teaspoonful of the poultry powder to every five fowls.

To give the fowls the proper exercise the following grains are fed in the litter: One-half ounce each of coarse cracked corn, whole wheat, and hulled oats, also sprouted oats daily. Every other day we substitute one-half ounce fresh cut bone for each fowl. For their night feed the fowls are also supplied with green food, such as cabbage, mangels, oyster shells and grit always before them. Fresh water, not too warm or too cold, always supplied. The feeding troughs and drinking vessels are frequently scalded with hot water.

### Why Does the English Pen Lead Our American Birds?

There must be a reason. Just what is responsible for this difference is yet to be determined. But when any one breeder in England or elsewhere can pick out a single pen of birds which will outlay 69 pens of American birds, and in five and a half months can get a lead of 169 eggs over its nearest competitor, we are inclined to believe that more than mere "luck" is responsible for this difference. After traveling on the ocean and land for two weeks en route to Mountain Grove, these birds laid their first egg in about three or four days after they arrived, and have kept it up consistently ever since. This pen must have been without feed or water a good portion of the time while being shipped. They appeared very thirsty and hungry when they arrived at this station, and there was no evidence of any feed about the shipping coop. Notwithstanding these facts and the fact that they were jostled, more or less and handled and transferred several times en route, they soon set about laying with a vengeance.

In view of the above rather startling facts, the question naturally arises, "Why are these hens from across the

pond so far excelling the best layers which American breeders have been able to produce?"

The average person wants to know right away whether the English White Leghorns look any different from the American White Leghorns. Yes, they do. The Leghorns from England have a distinctive type quite similar to the American Minorca. They are slightly larger than the American White Leghorns, more rangy, with larger combs, lighter colored eyes and tails pinched or not well spread. In this difference in type some poultrymen think they see the secret of the difference in egg production. They declare that the English Leghorns have more of an "egg-type" than their American cousins. Perhaps they are right, although there is room for a reasonable doubt.

Other observers of the contest declare that it is all a matter of breeding, that while utility poultry breeding in America is just in its infancy, in England it has been studied and reduced to a science for centuries. They simply admit that the American breeder has been outclassed, that he still has a lot to learn, either by experience and experimentation, or by taking lessons of his English cousins. The change in climate may have stimulated the English birds to better production. The change of climate would more than likely increase or decrease the production and it seems to have had the desired effect in this case. We are of the opinion that back of it all, however, is a difference in selection and breeding.

Still other investigators strongly assert that it is neither a matter of type or breeding, but that the high records which the English Leghorns are making at Mountain Grove are due to the fact that their owners have become skilled in maturing and handling pullets so that they will lay just when they want them to lay. This is indeed SOME skill, especially when they continue to exert this subtle influence after their birds are four thousand miles away, and have gone for months and months! This reason would seem much more logical if the English birds had simply begun to lay before the American birds did, and then simply main-

tained their lead. But when, after the American birds had gotten down to business, the English birds still continued to lay more eggs EACH MONTH, it fails to hold water.

One thing is certain, the English hens are ahead, and it begins to look as though they are going to stay ahead. Their owners have very evidently "caught on" to something which the American breeders have not. Just what that "something" is, remains to be seen. Most careful students of the situation, however, are agreed that it is largely a matter of scientific breeding and careful selection.

The owner of the English pen which is leading at the State Poultry Experiment Station at Mountain Grove, Mo., states that this pen of pullets was bred from females with high records and also sired by males bred from high-laying hens.

We have been urging Missouri farmers and poultry raisers for several years to breed from high layers, or at least from good layers, and have also insisted that the males which head the flocks should be sons of high layers. The latter is more important in our opinion than the former. Of course, it is understood that the breeding stock must be reasonably good size, considering the breed, and also be birds of high vitality. We feel that the average poultry breeder has been paying so much attention to color of feathers and show records that they have lost sight of the production of eggs to too great a degree. The English breeders made the same mistake several years ago, and, to revive an interest in egg production they started egg-laying contests, and this pen of winning hens is partially the result of this work. We hope some such benefit will come to Missouri and American breeders as a result of the egg-laying contests which have been started by the State Poultry Experiment Station at Mountain Grove. One thing is certain, promiscuous and careless breeding will never enable the poultrymen of this country to make any progress in egg production or along any other line. Careful breeding and selection must be practiced if we are to make progress in any branch of poultry husbandry.

## Wheat and Hay Only Exceed Poultry Products

Rapid Progress Shown by Figures Compiled by Professor Dryden

THAT the wheat and hay crops were the only ones which exceeded the poultry products, in the figures of the federal government in 1909, and that wool, orchard products, potatoes and swine all fell short of the poultry crop are interesting facts brought out in a recent statement on the Oregon poultry industry by Prof. James Dryden, poultry husbandman of the Oregon Agricultural College. He gives a general survey of the past history and present status of the hen in the beaver state, and predicts great things for her if she is only given a fair chance to show what she can do.

"Poultry keeping is making rapid progress in Oregon," says Prof. Dryden. "The last census of the federal government showed that the production of poultry and eggs in this state for the census year 1909 amounted to \$4,330,000. That is exclusive of the amount produced by small poultry keepers in towns and villages, which, if included, would increase the amount to probably \$5,000,000. The previous census taken in 1899 showed practically half this amount, so that the production was doubled during these ten years. Since 1909, however, there has been a much greater development than in any other similar period. It is safe to say that the increase during the past two years amounted to at least \$2,000,000. The poultry production during 1912 has been estimated at \$7,250,000.

"It is interesting to note from the census figures of 1909 that poultry products were exceeded by only two other branches of annual industry, namely, those of cattle sold and dairy products; poultry was third in the list. The wheat produced exceeded the poultry products, so did the hay crop, but the wool crop, the orchard products, potatoes, swine, etc., all fell short of the poultry crop.

"The poultry industry, therefore, is a large and growing one. It is a legitimate business and it is impossible to estimate what the next ten years will bring forth in the way of poultry products in this state. With the proper encouragement and direction the poultry production in this state should easily amount to \$20,000,000 before many years. It is an industry as much neglected as any other, but is capable of great and rapid development.

"During the past five years the Agricultural College Experiment Station, through its poultry department, has been actively engaged in building up this industry. It is not the only purpose of the college to increase production, though that is a laudable purpose, because thousands and millions of dollars have in the past been sent out of Oregon to purchase poultry and eggs for Oregon consumption. That bids fair to be a thing of the past in another year or two, but the big problem in poultry-keeping is now not only to increase production but to improve the economic qualities of the hen, in order to increase the profits. There will doubtless come a time when customers in the cities will be able to secure at reasonable prices all the poultry and eggs they care to eat at any season of the year, and that is right. Eggs are too much of a luxury at certain seasons of the year, but should the prices fall, and I don't expect them to fall very much on the Pacific Coast, it will be necessary for the producers, by better methods of breeding, to increase the average production of their flocks. The cost per dozen eggs must be lessened, and that can only be done by breeding up laying qualities.

"We have shown at the experiment station that the variation in laying in the average flock is very great. Records as high as 250 eggs and more have been secured, and at the same time from the same flock and with the same care there have been records as low as 6 eggs.

"The poultry industry has reached a point where, if it is to be a profitable business in the future, greater attention must be given to productive qualities. There are too many deadheads in the average flock. Our results at the experiment station further show that there are great possibilities in the way of breeding. It is useless to cry for more eggs when we neglect the only certain method of increasing production. Oregon is a good poultry state. We have the natural advantages; we have a good climate, cheap foods and good markets. Now let us make it a country that excels not only in climate and markets, but in high and profitable egg production. With this end in view the Board of Trustees of the Agricultural College has proposed to enlarge the poultry husbandry work of the college in order to meet the demand of the farmers for better laying stock as well as better meat breeds. The consumers in the cities also have a direct interest in this work.

State of Illinois, County of Cook, ss.:  
G. M. Atwell, president of the Atwell  
Printing House, Chicago, being duly  
sworn, certifies that the American Poul-  
try Journal has contracted for printing  
and binding sixty thousand copies of  
the June, 1913, issue.

G. M. ATWELL.  
Subscribed and sworn to before me this  
17th day of May, 1913.

(Seal) HENRY G. EISERT,  
Notary Public.

## OUR GUARANTEE.

We guarantee our subscribers against  
loss due to fraudulent misrepresentation  
in any display advertisement appearing in  
the American Poultry Journal, providing  
the subscriber when ordering the fowls  
or merchandise states that the advertise-  
ment was seen in the American Poultry  
Journal, and places the order during the  
month or months in which the ad is in-  
serted in our columns and notifies us of  
the fraudulent misrepresentation of the  
advertiser, giving full particulars, as soon  
as it occurs.

## The Farm Egg Bulletin.

In this issue we have given consid-  
erable space to a review of the Bureau  
of Animal Industry's recently issued  
bulletin, by Harry M. Lamson and  
Charles L. Opperman of the United  
States Department of Agriculture, on  
"The Care of the Farm Egg."

If you haven't received a copy, get  
one and read it. Our review is a hasty  
one and only fragmentary. The bulle-  
tin presents some old truths scien-  
tifically proved and told in a forceful  
manner that is easily understood.

There is abundant room for improve-  
ment in the means of getting eggs to  
market. A shrinkage or loss of from  
12 to 17 per cent of the total produc-  
tion would not be put up with very  
long by the producers of other food-  
stuffs. Better work for better trans-  
portation of eggs as well as for better  
conditions on the producing plant.

Already we find enterprising farms  
that are endeavoring to secure a direct-  
from-farm-to-the-consumer trade in new-  
laid eggs. Bear in mind that fresh  
eggs deteriorate in hot weather almost  
as quickly as raw milk. The fresher  
an egg is, when it goes to the cook to  
be prepared for the table, the better.

An enterprising Massachusetts farm  
is now advertising fresh-laid eggs by  
parcel post at 45 cents the dozen,  
mailed the same day laid. As the  
trade will be mostly within 12 hours'  
transportation from farm to consumer,  
this should insure minimum deteriora-  
tion. The price quoted is a 15 cents  
advance on the door price, and includes  
shipping package and postage as well  
as delivery at postoffice. Maintain the  
same relation between door price and  
delivered price through the season, and  
it will be worth while for both pro-  
ducer and consumer. We shall watch  
this with interest.

There are great possibilities in par-  
cel post trade if the farmer can get  
enough of it without too great an ex-

## SUBSCRIPTION PRICE.

United States and Mexico, 1 year, \$1.00;  
3 years, \$2.00.  
10 cents a copy of all newsdealers.  
Canada, 1 year, \$1.25; 3 years, \$2.75.  
Foreign, 1 year, \$1.50; 3 years, \$3.50.

Look at the address on your wrapper.  
See that it is absolutely correct and no-  
tify us of any mistake, no matter how  
slight. Note the expiration date which  
appears thereon, as American Poultry  
Journal stops with the issue marked on  
your wrapper.

If you change your address give both  
your old and new address as well as your  
subscription number when notifying us of  
the change.

AMERICAN POULTRY JOURNAL is  
the oldest poultry paper in America. It  
has a national and world-wide reputation.  
The best writers on poultry matters con-  
tribute to its columns. It receives the  
patronage and endorsement of the fore-  
most representative breeders of standard  
poultry and manufacturers of poultry ap-  
pliances in the country.

pense for advertising, and providing he  
can get a suitable egg carrier at rea-  
sonable cost.

Good new-laid eggs from well-fed  
flocks ought to be worth 60 cents a  
dozen, delivered by parcel post, the  
year round, on a twelve months' con-  
tract. Here is a chance for egg farm-  
ers to get busy.

## The Anonymous Letter Writer.

Fortunately, in our experience, the  
anonymous letter writer has been con-  
spicuously absent from among our cor-  
respondents. The man who is either  
ashamed or too cowardly to sign his  
name to his letters is not an object for  
admiration. Now and then an unsigned  
communication reaches us and it usu-  
ally goes promptly into the waste  
basket.

We have, however, one such anony-  
mous correspondent who has been un-  
usually persistent during the past year  
and a half and we can count on hear-  
ing from him at fairly regular inter-  
vals. We don't know who he is or  
where he lives, except that his letters  
usually come from the vicinity of Phila-  
delphia; sometimes from New Jersey,  
sometimes Pennsylvania, and the last  
from Annapolis, Maryland. He poses  
as an exponent of a "square deal." He  
reads A. P. J. with considerable  
faithfulness and is an apostle of the  
Rural New Yorker. For these reasons  
we are writing this editorial in order  
to give him an opportunity to discon-  
tinue low and cowardly methods and  
declare himself like a man.

This same unknown attacks freely  
the reputations of reputable men and  
firms that advertise in the leading poul-  
try and other magazines. He is an ad-  
vocate of reform, a square deal, and  
the showing up of frauds—that is the  
way he tells it in his letters. Yet he  
isn't man enough to sign his name to  
his attacks. We don't see how he rec-  
onciles his declaration of faith with his

own acts—maybe he will tell us.

The last letter, dated April 26, reads  
as follows:

"Sir: See 'Rural New Yorker,' issue  
April 26, 1913, page 622, column two,  
bottom. Interesting information E. A.  
Strout & Co. You bought your farm  
through these people and recommended  
them as all right. These parties get  
you both ends, cumming and going,  
which is all right I suppose from your  
view point. But Gee! Will you ever  
get wise to the 'Fakers' and admit  
it? Yours truly,

Ha Ha! For a square deal all round."

The Rural New Yorker is a paper  
that makes a specialty of uncovering  
and showing up frauds and misrep-  
resentation. From its pages one would  
suspect a lack of sympathy between the  
editorial department and the advertis-  
ing department of that publication,  
since some of its advertising is wide  
open to criticism. That is usually the  
way with ambitious reformers, very  
blind to their own faults at home, but  
very intolerant of the faults of others.

We did buy our farm through the  
Strout people. Their representatives  
showed us many farms and all of them  
more nearly as represented than many  
we looked at through other agencies.  
We have no fault to find with the  
treatment we received and we are very  
well pleased with the place we bought.  
Our recommendation of the firm con-  
sisted of expressing our satisfaction  
with our own purchase. Now we hold  
no brief for the E. A. Strout Co. and if  
they have done wrong in any way we  
have no desire to defend them. But it  
is just as well to be reasonable and a  
lot better than to be intemperate in a  
matter of condemnation. This firm is  
selling more farms to satisfied custom-  
ers in our locality than any ten other  
agencies. We don't know of a firm  
that would find us a customer for our  
own place more quickly than they  
would.

We don't like their regular contract

with parties who have a place for sale. We think a man would be foolish to sign one of those contracts without having certain alterations made to suit his own particular case. That is equally true of the majority of printed blank forms used in agreements, sales and transfers. Their agreement to sell, which the purchaser receives after making a deposit on the property bought, is one of the best we have ever seen.

In selling or buying real estate one meets all sorts and conditions of men. To be successful in the real estate business, particularly specializing in farm property, requires the patience of Job, the disposition of a seraph, and a bump of humor that can't atrophy. There is no class so fickle or so changeable of mind as the men and women who have farms of their own to sell. If one is to advertise such places and show them to customers, one must first have some ironclad contract with the owner in the matter of sale, price and commission. Every real estate contract we have ever seen contains clauses that are put in to protect the holder against certain emergencies. Many of them get the agency's commission taken care of both "coming and going," as our anonymous correspondent says. The agency has learned by experience that it must protect itself. Men are not in real estate, or any other business, merely for their health. They are out for the "dough" and they are not going to do business unless they make money.

Instead of raving about fraud, where there is room for plenty of doubt that any fraud exists, why not take a little time to educate people up to being careful about what they sign their name to. Make them learn that any legal or printed form of contract should be carefully read FIRST, then instruct them to make sure that they FULLY UNDERSTAND what they are signing; and to remember that there is plenty of time to sign any paper after being SATISFIED THAT IT IS ALL RIGHT.

Don't sign any contract until it is worded to suit you. Be sure you understand it fully. Reform is a good thing and in some (most) walks in life it is needed, but, like charity, it is a good thing to begin reform at home. Instead of spectacular shouting about others' faults it might be well to remedy a few of your own.

#### Permanent Home Turned Down.

Complete returns of the 1913 annual election of the American Poultry Association are given in another column. One of the surprises of the election was the result of the ballot on the permanent home proposition.

Although the ballot on permanent home, as finally presented to members, amounted only to an expression of the opinion of members as to the suitability of Chicago as the location for a permanent home and the sanction of the Chicago Poultry Society's offer, which would then be considered at the next annual meeting, it seemed reasonable to expect a unanimous or almost unanimous ballot in favor of the proposal.

The ballot as it stands on the returns was "No, 1046; Yes, 878." Evidently members either do not want a permanent home or headquarters, or they do not consider Chicago a suitable place for it.

The Chicago Poultry Society was organized solely for the purpose of se-

curing a permanent home for the American Poultry Association in Chicago. It enlisted the aid of the Chicago Association of Commerce in advancing the project, secured an option on a suitable building site, and offered at the Nashville meeting to give to the A. P. A. a building site and building having a valuation of \$100,000.

At that meeting it was assumed that many other cities would be eager to offer inducements for the A. P. A. to locate their permanent home with them and, assuming that it would be wise to wait for something better, the association turned a cold shoulder toward Chicago's gift offer. A permanent home committee was appointed to secure and investigate offers. On motion of Grant M. Curtis, amending previously proposed resolutions, it was finally voted to "take a mail vote on the location at the same time that we elect officers for 1913 and that this mail vote be presented at our next annual meeting, and that it be given all the weight to which it is entitled, but that it is not to determine the matter; that the matter itself shall be determined at the next annual convention of this Association by the members present and voting."

From the wording of the amended motion the mail vote on permanent home could have no weight other than as an expression of opinion on the part of members. The matter of a permanent home has yet to be acted upon and settled at the 38th annual meeting at Atlantic City next August "by the members present and voting." So far as can be learned to date, no city other than Chicago has made any overtures toward securing the permanent home of the A. P. A.

After being given the cold shoulder at Nashville on offering the Association a gift of \$100,000 and again\* being snubbed by the majority of the A. P. A. members in the mail ballot, it seems unlikely that the Chicago Poultry Society will feel much enthusiasm or take any further steps in the matter. The Association of Commerce, at the beginning enthusiastic and willing to back the Chicago Poultry Society to the limit on the permanent home proposition, naturally did not enthuse over the attitude of the A. P. A. at Nashville and finds still further good reason for "cold feet" as a result of the mail ballot and it now declines to make any definite promise as to what it will do, or will not do, until such time as the A. P. A. decides just what it wants and will do in the way of a permanent home.

It is poor policy to "look a gift horse in the mouth." The Association not only did this but it was not particularly polite to either the horse or the donor. It is reasonable to assume from developments that the American Poultry Association as a whole does not want a permanent home. Also that no city, other than Chicago, particularly desires to be honored by becoming the location of the permanent headquarters; at least there does not seem to be any pushing for place.

The time to accept a gift is when it is offered. The offer made at Nashville was bona fide and the Chicago Society stood ready to go ahead with the proposition and make it a credit to the city and the association. It is not easy to keep a matter of that kind alive and warm after two rebuffs such as the proposition has received. We do not know whether any further steps will be

taken in the matter by the Chicago Poultry Society or that there will be any effort to bring it before the Atlantic City convention. Having received a wallop on both cheeks we would not expect Chicago to ask for a third helping.

" 'Tis true 'tis pity;  
And pity 'tis 'tis true."

#### Reorganize From Within.

We recall during our student days a certain very capable and successful professor of surgery, who on every possible occasion drilled it into us youngsters that the healing of a wound should be from within outward and that in no case should we let one heal on the outside and retain unhealed tissues and venom within.

It is mighty good advice and can apply with force to other matters than surgery. During the past few months we have been several times invited to become identified with a movement that is intended to create an organization that is to be for American poultrymen what the American Poultry Association should be, but is not. In other words a great poultry organization is to be built up to take the place of the old A. P. A. and to be free from its faults. It is urged that the A. P. A. is in the hands of a few who use it for personal gain and that the members at large, individually, get little benefit from the association.

We are not prepared to join any such movement. We have but little time to give to any association work and such as we have, and such little as we can give, we prefer to put into the old American Poultry Association. We believe that all old members and all new ones will find that the best course. The right sort of work done in the A. P. A. will make it all that any poultry association can be and it has the advantage of being already organized in the nation and many states and on its roll carries the names of the most prominent men interested in the industry.

Whatever is wrong with the A. P. A. can be mended from within if the members will unite and work for it. If ring rules, and the ring rule is offensive to the majority, then get busy, organize a new machine among the dissatisfied members and put through a vigorous reform campaign. Let the healing be from within. Reorganize from within. With all the smoke about dissatisfaction, graft, ring rule, and using the association for personal gain, there must be some small smudge of fire (or perhaps a big one) at the bottom of it. If there is canker eating at the heart of the association, unite to cut the canker out and then heal the wound from within.

The old organization has done a great deal of good in its time; it can do still greater good. If it needs an "Ali Baba" to help out the "forty thieves," the way to find him is not to build a new organization on the outside. Get busy and reorganize from within.

Since writing the above we note an editorial of J. H. Robinson's in May Farm-Poultry recommending deliberate reorganization of the American Poultry Association from within and commending the hammering away at the faults of the present "misfit organization." Good! Robinson does not believe in a new organization, and in the matter of organizations and organization politics John is "some doctor." He says:

"The association should reorganize from within. Its membership at present includes practically all of the men who would be active in organization work, whatever form it might take. Why then should not these men combine within the association and reform it."

Sound sense and sound organization surgery that!

[Note.—As this goes to the printer A. P. A. election report has been received and it is to be hoped that the returns indicate that healing has already begun from within. The prognosis is favorable.—Ed.]

#### E. B. Thompson Is President-Elect.

Our congratulations are extended to the members of the American Poultry Association and to President-elect E. B. Thompson on his election to the highest office within the gift of his fellow members.

Mr. Thompson has won his presidency in the face of unusual and powerful opposition. We believe he has won it on sound personal merit and on the strength of the pledge he made to every member of the American Poultry Association in a personal letter. That pledge reads:

"If elected I will take office FREE FROM ANY PLEDGE OR PROMISE to any man or men, except the pledge I now make to you, viz.: To bring to the high and important office of president all the ability I have and to use

it for the benefit and best interests of every member and breeder in this great industry of the United States and Canada. My rulings and every official act on all questions coming before me will be fair and just to all, according to my best judgment.

"By my election to the presidency the poultry breeders will have a representative who knows their needs from an experience of over 30 years in the ranks, and who will work faithfully for the betterment of poultry conditions."

Mr. Thompson has been a member of the A. P. A. for 22 years. He has a world-wide reputation as one of America's leading successful breeders and he is also a successful business man with more than ordinary executive ability. With his lifelong experience as a breeder of poultry he should be in sympathy with all work that is for the best interests, welfare and prosperity of all poultry keepers. His opponents have urged that he has not the time to spare to devote all of the energy that will be needed in association work at this critical period and that in the past decade he has only attended two or three annual meetings. We cannot see that that matters much at this time. Mr. Thompson is best judge of how much time he can spare for association work. He has made his pledge to all members, is now the president-elect of the association and it is UP TO HIM TO MAKE GOOD.

He knows, as well as any member and better than most, that now is a

critical period in the development of the American Poultry Association. He knew that his election would call for the expenditure of much valuable time and the active doing of much hard work. We believe he fully appreciates the situation and what his election means to the association, to the poultry industry and to himself. We give him full credit for entering the campaign with his eyes wide open and prepared, if elected, to do his best.

We again congratulate Mr. Thompson and the American Poultry Association on the result of the election. Let us hope and believe that when the curtain rings down on the final act that our new president can say:

"I have fought a good fight, I have finished my course, I have kept the faith."

Atlantic City, August 10-16, 1913.

The 38th annual meeting of the American Poultry Association is to be held at Atlantic City August 10 to 16, 1913. One thousand one hundred and twelve voters gave "The Queen City by the Sea" as their choice of a meeting place. Let us hope that they will all attend the meeting and that the 1,558 voters who did not vote for it will forget their prejudices and join the others on the great "Board Walk" and in the convention hall.

Every member should make an effort to attend this meeting. Anyone who has never visited Atlantic City ought

to make the pilgrimage once. The second week in August is a good time to get down by the old Atlantic Ocean and learn what the wild waves are saying. There is only one Atlantic City and it is well worth a visit. Those who have been there will find reasons enough for going again.

Chairman Harry Wolsieffer, of the Atlantic City Publicity Bureau of the New Jersey Branch, promises a most enjoyable programme for the A. P. A. members during convention week.

Of course you will want to take a real live interest in the business of the convention, but there will be abundant time for play as well as opportunities for good work. There are to be trolley joy rides, chair rides on the Board Walk, a real seashore clam bake, a trip to the State Poultry Experiment Station and other good things to make it a memorable week.

Plan to spend the second week in August in Atlantic City. Sew a return ticket securely in your inside pocket and meet us on the Board Walk prepared for a good time.

The Second International Poultry Exposition on Young's Million Dollar Pier will be in full blast during convention week. It is to be more elaborate in every respect than the 1912 event and should be well worth seeing. Poultry Item says: "Many new people will catch the 'chicken fever' at the Million Dollar Pier and those who exhibit will have the first call on their patronage."

It's a "fever" good to have and hold. The more who have it the merrier. Meet us on the Board Walk!

#### BYERS STRAIN ORPINGTONS BETTER THAN EVER.

**IT IS THE PURPOSE** of the American Poultry Journal to chronicle reliable information relative to scientific and practical research along the line of fancy and utility poultry breeding for best results. Also to further the legitimate interests of its advertisers.

Occasionally we feel it our duty to make special mention of a breeder in whom we have for years had complete confidence and whom we are thoroughly justified in representing to our subscribers.

It is with unusual interest and pleasure that, in this connection, we mention C. S. Byers, Orpington specialist for 15 years, of Hazelrigg, Indiana.

There are those who spring up in the fancy that have their records to make in the show room, in successful mating and breeding their choice of varieties, in their facilities for serving customers right, in their efforts to please those who would be displeased were it not for a policy innately established in their character to thoroughly please every reasonable customer.

In the person of C. S. Byers we have these records fully incorporated and more. For fifteen years C. S. Byers has

successfully bred Orpingtons exclusively. He has won hundreds of premiums in the keenest competition and through his sales in stock has made it possible for the rank and file of Orpington breeders throughout the land to win, because every Orpington breeder throughout the land has bought, inspected or heard of "BYERS STRAIN ORPINGTONS," and it is our prediction and hope that he will be at your service for years to come. The day that his name is eliminated from the list of Orpington breeders, then it will be that the Orpington fancy will have lost one of its most valuable and staunch supporters, because it is principle with Mr. Byers once and for all ways, and in such men depends absolutely the popularity of any breed. As an example of the esteem in which members of the Orpington clubs hold Mr. Byers we would mention the fact that he has been repeatedly elected to office in the Buff, Black and White Orpington clubs of America without solicitation on his part in any instance.

Moreover, Mr. Byers, without soliciting the position, has been urged to place the awards on Orpingtons at the largest shows of our country. Although not in the judging business, he has sacrificed his time and business at his plant to officiate as judge of Orpingtons during the past year at Madison Square Garden, New York, and Los Angeles, Cal.

The fancy needs and demands more genuine fanciers such as Mr. Byers,

because he is an expert, and with his knowledge, his splendid facilities and his hundreds of strictly high grade, line bred Buff, Black and White Orpingtons, coupled with a determined purpose to please every reasonable customer, he deserves liberal patronage and success.

Whether you, as an Orpington breeder, have ever patronized Mr. Byers or not, you are indebted to him as a constant and permanent supporter of this great breed because it is such men as he who have maintained and will continue to maintain their popularity.

Our sentiments as above expressed regarding Mr. Byers and his business policy is respectfully extended to all lovers and prospective purchasers of Buff, Black or White Orpingtons with the guaranteed assurance that you will get a square deal.

The accompanying illustrations represent the approach to the Byers Orpington plant. Mr. Byers tells us he has over 2,000 chicks, many of which are January and February hatched, growing for fall fairs and early shows. Also that his matings this year exceeds the quality that made "Byers Strain Orpingtons" famous.

#### DR. WOOD'S NOTES AND COMMENTS.

It's all over now but the singing. Congratulations, President-elect Thompson! May you MAKE GOOD and help the American Poultry association to live up to its tenets: "Progress, Purify and Protection" in the field of "Every Poultry Interest." It's up to you!

\* \* \*

We are glad to see Secretary S. T. Campbell re-elected by a very handsome vote. It is a good rule when you

have a good man in the right place to keep him there. It looks as though members thought it a good rule to follow. Mr. Campbell has done good work in the past and now being richer in experience, we believe he will do much better work in the days to come. More power to your good right arm Mr. Secretary.

\* \* \*

Atlantic City gets the 38th annual meeting the second week in August. Something doing there every minute. Young's Million Dollar Pier, it is said, will be a great place for "chicken fever." Anyhow, the Board Walk will be a great place for "chickens." Oh, you poultry judges!

\* \* \*

Won't the Ancient and Honorable Order of Fleas be right in their element down by the sad sea waves? Be sure to take your bathing suit along and mind the undertow.

\* \* \*

We expect Reese V. Hicks will be happy next August when he lays down the presidential gavel and retires once more to "gentle" journalism. He has had a strenuous term of office and it has not been all roses. Never mind the thorns now that it will soon be over. Being president of a national organization gets more knocks than bouquets. Congratulations on your release, you lengthy Southerner, and may your good work receive full measure of appreciation.

\* \* \*

Attention has been called to the fact that if so many had not voted for Chicago and for Boston, which cities made no bid for the A. P. A. convention, that Detroit might easily have won it. Perhaps! But we do not recall any very strenuous efforts on the part of Detroit to get the meeting. The boosting was only half-hearted at best and it usually takes some real live effort to win. Personally we would rather go to Detroit than Atlantic City as we live close to the seashore, but we find a good deal of pleasure in anticipating a visit to the "Queen City by the Sea" at that.

\* \* \*

W. C. Cleckley, Augusta, Georgia, becomes first vice president of the A. P. A., being advanced from the second vice presidency. A. A. Peters, Denver, Colo., is elected second vice presi-

dent. He made many friends at the Denver convention. We haven't had the pleasure of meeting either of these gentlemen personally but we hope to do so this summer.

\* \* \*

There is no great change in the A. P. A. executive board. Grant M. Curtis is retired from office and his employee William C. Denny is elected to fill his place on the board by a very handsome vote. U. R. Fishel, of Hope, Indiana, and Chas. D. Cleveland, Eatontown, N. J., are re-elected board members.

\* \* \*

Glory be! But the ways of the modern newspaper "journalist," like those of the heathen Chinese, are peculiar. For months we have been regaled, ad nauseam, with egg wars to break an "egg trust" that never existed, with wars on dealers in deteriorated eggs, weird tales of bad eggs, rotten eggs, until the public was so nauseated that the thought of even fresh eggs for breakfast was repulsive and the shrinkage in demand and consumption cut egg prices way below a fair valuation for the season. Now, the sensation mongers have made a great discovery. Eggs are very desirable food. They contain lecithin, 16 grains to the egg, it is said. The discoverers find that lecithin is found in the tissues all over the body, but particularly in brain and nerve cells and they recommend an egg for breakfast as nature's best medicine, on the basis of there being sufficient lecithin in an egg to feed a man's nerve cells for one day. That is one way to try to create a greater demand for eggs after sickening the public with gruesome tales of bad eggs.

\* \* \*

How about the discovery? Like most Sunday supplement discoveries, it is not particularly new and dates back quite a while, about half a century or longer, if we are not mistaken. In any event, the details of preparation of lecithin from egg yolk, where it occurs in union with vitellin, are given in Hoppe-Seyler's medical chemistry published in 1867. The medicinal value of egg yolk and its value as brain, nerve, blood and tissue food has been known and made use of for a much longer period. Known, used and forgotten, to be rediscovered many times in all probability.

\* \* \*

Lecithin, formerly obtained from brain tissue and from egg yolk, is now almost exclusively obtained from egg yolk and is sometimes called ovollecithin. It is one of the complex nitrogenous fats and is a phosphorus containing constituent of brain substance. Lecithin occurs widely spread throughout the body tissues and is a conspicuous component of the brain, nerves, semen, yolk of eggs, and white blood corpuscles.

\* \* \*

In medicine it is used as a constructive tonic in a number of diseases resulting from disturbances of nutrition and has been found valuable in neurasthenia, nervous affections, tuberculosis, diabetes, etc. Just how far its medicinal values may be made use of when consumed in eggs taken as food is entirely problematical.

Nevertheless, without resorting to medical-chemistry to find an excuse for egg eating, eggs are mighty good food whether taken raw, plainly cooked, or in combination with other foods and

## The Dictograph Farm calls your attention

to Mr. Zimmer's article on page 912 May issue A. P. J. The "DICTOGRAPHIC HENS" are now only laying an egg a day but they do it regularly. We have some bargains in S. C. White Leghorns, and Silver Campines, also Indian Runner Ducks.

### RIDGE EGG FARM

K. M. Turner, Prop. West Nyack, N. Y.

## MARTIN'S RECALLS

### Half Price Egg Sale

After June 1st the prices of eggs from my prize matings (as they run) will be, \$2.50 per 15, \$4.50 per 30, \$6 per 45, \$12 per 100.

Dorcas pens, \$3 per 15, \$5.50 per 30, \$8 per 45, \$16 per 100. Special matings, \$5 per 15, \$9 per 30, \$12 per 45. Utility matings, \$3.50 per 50, \$6.50 per 100.

This is an excellent chance to become acquainted with America's finest White Wyandottes at small cost. All my winning pullets and some of winning cockerels at the last Boston Show were hatched in the month of June, 1912.

FREE—Send for catalogue and Summer sale list, giving description of several hundred breeders I am offering for sale.

Send four cents in stamps for a Regal White Wyandotte Book.

JOHN S. MARTIN  
BOX 51 :: PORT FORT WORTH, TEXAS

Crusader III, a Boston Winner

drinks. We know of no food that will give better results than fresh laid eggs sensibly fed to growing youngsters and the human animal of whatever age is generally much benefited by making use of a fairly liberal number of eggs in the regular diet. We have seen persons, who had been told that they could not eat eggs, y medical advisers and who firmly believed that each time they ate eggs, or food containing eggs, they paid dire penalties in illness. Several such have, from time to time, come under our observation and care and we are glad to be able to say that each and every one now eat eggs, have a healthy appetite for them and are greatly benefited thereby.

\* \* \*

There is no better article of nourishment for human beings than new laid eggs from properly fed hens. Such eggs are well worth fifty cents a dozen for table use in any locality where beef sells at 30 cents or more the pound, and pork and lamb at from 20 cents upwards. Eaten sensibly, prepared in the many attractive ways known to a good cook and not eaten to the surfeit of the individual, they will be productive of only good results.

\* \* \*

We recall a visit made once to a very active and hustling poultry keeper, a successful man who is all energy and push and whose activities must use up a very great amount of nerve force. We never had been accused of being at all backward as a trencherman, but breakfast is usually our lightest meal. At early breakfast with our host, after being helped to three beautifully cooked fried eggs, we protested that we really did not care for more. "Three eggs enough!" exclaimed our friend. "Why, Woods, I wouldn't dirty my plate for less than a dozen!" That beats us though we like eggs and seldom have more or less than two every morning for breakfast, whether the price is five cents each or less. Good eggs for breakfast help to start the day right and we'd be lost without them.

\* \* \*

We have a letter from John E. Zeller, treasurer of Wozelma Farms, which

states that the new plant in West Orange, N. J., has already picked up a good market business in eggs and poultry and is making money. The new plant is named Zelca Farm and the name Wozelma is to be abandoned.

\* \* \*

We have received from Cyphers Incubator company, Buffalo, N. Y., two attractive booklets entitled "Best Methods of Brooding" and "Poultry Foods and Feeding," also an unusually attractive assortment of literature advertising their specialties. The advertising manager is to be congratulated on his 1913 output.

\* \* \*

Our thanks are due to Thos. F. Rigg, Iowa Falls, Ia., for four apple trees, two Delicious, one Winesap and one McIntosh, sent to us for the Anchorage Farm. We set them out on April 30, and they look thrifty. Horticulture and poultry are Mr. Rigg's two pet hobbies and some day we hope we can visit his private horticultural experimental grounds.

\* \* \*

We received a letter from our friend Bob Essex, in April, too late for the May number, reporting a fire in the factory of the Robert Essex Incubator Co., Buffalo, N. Y. It started in the paint shop on the top floor and though the firemen did fine work in preventing spread of the fire, considerable damage was done by water. Coming in the midst of the busy season it interfered considerably with business. Mr. Essex however, assures us that the entire force is right on deck and that they are making every effort to fill all demands with promptness and to satisfy all patrons. We've known "Bob" a good many years and he sure is some hustler when it comes to surmounting obstacles and making good under difficulties. He insists on superior goods and superior service and when he goes after anything he usually gets it.

\* \* \*

In a newspaper dispatch dated Northampton, Mass., April 16, we find reported the arrest of Rev. Carl Emil Petersen, charged with using the mails to defraud and representing himself as

an expert poultry breeder and accepting sums of money for which it is alleged he gave no return. He was arrested at his home on Locust street by Deputy United States Marshal Edward J. Leyden, of Springfield, as a fugitive from justice. He was arraigned before U. S. Commissioner Rice in Springfield, and placed under \$1,000 bonds to appear in the U. S. District Court, Portland, Me. The arrest was the result of an investigation by Inspector Spofford of the Post Office Dept., now stationed at Portland. It is stated that many complaints have been received by the authorities, dating back to 1908, from people claiming to have mailed checks and money orders to the Rev. Petersen and to have received no reply.

We have no information on the case other than that contained in press reports, and at present writing have not learned what disposition the court has made of it. We know of the Rev. Mr. Petersen only through correspondence of several years ago and his published contributions in the leading poultry journals. For a number of years he was a contributor to a number of representative poultry magazines, A. P. J. among them, and received recognition as an able and fluent writer. He was well known in Ottawa, Canada, as a clergyman and poultry fancier and was pastored a church there. His last pastorate was named at Portland, Me. It is said that he advertised himself as president of the Houdan Association of Portland, Me., and that the members of the association indignantly deny that he ever held such office. He is reported to be 53 years old, a native of Denmark and to have been in this country since the age of 18 years. The direct complaint on which he was arrested is reported as made by W. H. Bassett, of Cheshire, Conn.

In The American Stock Keeper for May 10th is quoted the following letter from James Abernethy, president of the American Houdan Club, in regard to the arrest of the Rev. Mr. Petersen:

"I feel sorry for Petersen, although he has only himself to blame. He is a smart man in many ways, he had some fine Houdans at one time and a very

## RUDY'S PERFECTION WHITE WYANDOTTES

SUPERIOR TO OTHERS THE ACME OF PERFECTION

### Eggs for Hatching

Get the best you can for your money. Don't buy eggs from questionable stock. They may be somewhat cheaper, but the outcome of the hatch will look the part.

Rudy's Perfection Wyandottes are known all over the country as the peer of the Wyandotte.

Get my mating list—free for the asking—and see the reasonable prices at which you can buy eggs from the Grandest Matings obtainable.

If you want to know all about breeding White Wyandottes, send for my Art Catalog. Absolutely the best book of its kind. Gives full information on how to succeed, how to take care of baby chicks, what to do when your fowls are sick. An article on how to fit birds for the show room is worth dollars to any breeder. Send 10c in stamps to help pay cost of mailing, etc.

**Geo. H. Rudy, R. 15, Mattoon, Ill.**

fine connection, and with attention to the business and straight work could have done well, as he had the reputation. Lately, however, he seems to have gone back in more ways than one. Charges were filed and finally he was dropped from the club. It is really too bad that the Houdan fancy should be having so much trouble on account of such men and their methods of exploiting the breed, and also exploiting the buyers. I had a letter this morning from Mr. Bassett, of Cheshire, Conn. He does not say much about the matter, merely that he bought birds which according to Petersen's description were the finest. He does not say whether he got them or not. He says: 'The first Houdans I ever owned were from eggs bought of McAvoy. Dealings with him were very unsatisfactory, and I purchased a trio from Rev. Petersen in 1910 which formed the basis of my present flock. Somehow or other, as one of our local judges expressed it, the Houdan breeders are in bad on account of crooked dealings, and I have come to the conclusion that it is unsafe to attempt to do business with any but the regular members of the American Houdan Club. It is unfortunate to have a man like Petersen in trouble, as it casts discredit on the Houdan breeders in general.'

"That is how it works, dealing with the crooked gentry is apt to drive people out of the Houdan fancy."

"Sincerely yours,

"Jas. Abernethy."

Everybody who is anybody in the gardening world fully realizes the value of poultry manure as a fertilizing agent when applied to garden plots, and any

local gardener will be glad to fetch it away and give in exchange any vegetable trimmings or other garden produce that otherwise would probably go to the rubbish-heap. Such vegetable matter will be relished by the fowls, and will help to curtail feeding expenses.

## OWEN FARMS

### A WORD OF APPRECIATION

I want to thank my hundreds of friends and customers of Owen Farms throughout the country who have written me the nicest letters of congratulation I have ever seen, and who have pledged me their support and patronage. It has pleased and gratified me beyond measure to have their feeling of good-will towards me expressed in these hundreds of spontaneous letters, which have shown it in a way I shall never forget. The feeling expressed in these letters has been the deepest regret that Mr. Owen should feel obliged to withdraw from the business, but they have been a unit in declaring that, if this had to be, they are extremely glad to have me the owner of Owen Farms flocks. Many of these letters have been backed up by orders for stock or eggs or both and the support accorded me has exceeded my most sanguine expectations and given me very great encouragement.

### SPECIAL FOR JUNE

Two carefully mated pens in each of my varieties at each of the following prices: \$25.00, \$35.00, \$50.00, \$75.00, \$100.00 per pen. Select the price you wish to pay and send me the amount directly from this advertisement. I will send you a pen of birds headed by a line bred yearling descendant of a First Prize New York Male that I have carefully mated to four excellent one or two year old hens from our 1913 matings. You can choose age you want hens. The older ones will be a little better in average quality. The pen you order will be shipped you on approval, subject to return in two or three days at my expense if you are not absolutely satisfied that you have the best pen of birds ever sold at the price paid, and I will cheerfully refund the full purchase price.

#### SPECIAL JUNE EGG SALE

Less Than Half Price

40c each; \$17.50 per 50; \$30.00 per 100 from best pens in existence. \$2.50 per 15; \$15 per 100 from grand good matings.

Buff, Black and White Orpingtons, White Rocks, White Wyandottes and Single Comb Reds

Have nearly 7,000 youngsters coming on for Summer, Fall and Winter showing and for 1914 breeders. The most promising chicks I ever saw. Hence my extraordinarily low prices on June eggs.

Write me at once for January Chicks for Summer Shows

In September I will issue a complete illustrated catalogue. Until then copies of Owen Farms catalogue and mating list will be gladly mailed you.

Try the Delano way and receive Delano treatment and you will remain a permanent Delano customer.

Address, Maurice F. Delano

## PROFITABLE POINTS OF PARTRIDGE WYANDOTTES.

An Ideal "General Purpose" Fowl.

THE beginner and those who have become dissatisfied with the "boomed" varieties of chickens should give serious consideration to the Partridge Wyandotte. It has required years of intelligent effort to develop this interesting and profitable variety to its present state of perfection, combining as it does the four essential characteristics of the ideal fowl—namely, winter-laying ability, quick growth, hardiness, and size, and the man who once takes up their breeding will not easily be tempted to make a change.

As a "general purpose" fowl, no breed stands higher than the Partridge Wyandotte in the minds of those who have raised them, its admirers claiming that it is the ideal fowl for farmer, fancier and suburbanite, combining the best points of the egg and meat breeds to a remarkable degree. They are hardy, active, excellent foragers, and the hens make splendid mothers. They are good all-year layers, though they lay most of their eggs during the winter months, when prices are highest, making them a profitable fowl for the egg farmer. A prominent breeder of Partridge Wyandottes says he frequently has pullets laying at five months of age. On July 5th last year this breeder took off a hatch, among which were eighteen pullets. Four of these laid their first eggs on December 24th, and on January 12th he got sixteen eggs from the pen of eighteen. We must admit that this is a fine record, especially for late hatched pullets, and is conclusive evidence that it is unnecessary to hatch Partridge Wyandottes in February or March in order to have winter layers.

The young chicks are hardy and active from the time they are hatched. They are quick of growth, frequently weighing two and one-half pounds at ten weeks of age, and have a fine textured meat of unexcelled flavor.

The Partridge Wyandotte has a rose comb, which is another point in its favor, as the veriest amateur in poultry keeping knows that a hen with a frozen comb will not lay, and notwithstanding the care and attention given the high single-comb birds, there will always be a few that get nipped when the mercury goes down about zero, invariably stopping the eggs for a week or ten days.

In beauty of feather the Partridge Wyandotte stands without a rival, as in the gorgeous combination of rich cherry red and glossy greenish black of the males, and the exquisite penciling of black on rich mahogany of the females, they have no equal from the standpoint of beauty in any of the domestic fowls. For the suburbanite and city poultryman, they have the advantage of not showing the dirt. Light-colored birds cannot be kept in close confinement near a city without becoming dingy and dirty, detracting greatly from the beauty of the fowl, while the Partridge Wyandotte stands confinement as well or better than any of the American or Mediterranean breeds. They meet every requirement of the fancier, as they are always ready for the show room, if properly cared for, do not have to be washed, are of quiet disposition, and easily handled.

This is not and never has been a

"boom" breed, but has steadily increased in favor year by year as its merits have become better known, and it is well worth the time of any one interested in poultry for profit as well as pleasure to carefully investigate the Partridge Wyandotte.

C. H. Chaplin.

## NOTES FROM ENGLAND

CONDUCTED BY

MISS CAREY, TOYNTON RECTORY, SPILSBY, ENGLAND

### FORECASTS FOR THE SEASON.

**E**VERY YEAR brings its fashions in the poultry world very much as the fashions in dresses and hats come and go and return again, and already breeders are sorting out their enquiries and forming a pretty good estimate of where the heavy demand will be and seeing how they stand to meet the demand for the early shows.

Last year we heard a great deal of a so-called slump in White Orpingtons, but no doubt a very great deal of this was accounted for by a market overstocked with birds of inferior quality required by few, for among the leading breeders trade seemed to have been very slightly if any below the standard and with some even in excess of former years. That matters are rapidly righting themselves is evident on the surface, for already orders are being placed as usual for winners for the leading events among those keen to take a lead and who recognize that at the top of the ladder is always room and to spare in trade.

This season's chicks show great prom-

ise wherever I have seen them. Any tendency to leggyness seems to have almost entirely disappeared. Instead we are getting deep, low, wide, massive little bodies with thick, sturdy, short white legs in the Orpington and, well—it looks as if the judges are going to have to scratch their heads over sorting out the best, if the youngsters develop as they now promise.

Our season here has been exceptionally forward, with a large number of January chickens coming on well, but as our great Royal Show is in June we shall need every day to get them in the pink of exhibition form.

Bufs show no tendency to decline in trade and orders are brisk, especially for winners, both at early and late shows, and any yard with a reputation for securing awards with the birds they rear year after year will find these

one of the most profitable breeds of the season.

Among the new varieties Blue Orpingtons are going ahead rapidly. There seems to be, however, a great scarcity of well-bred birds of this breed, and breeders who want to make quick sales are looking round for yards where they can secure a few good bunches at reasonable prices. No doubt for a time the scarcity as compared with Whites and Bufs of really good colored and typed birds is bound to keep the prices up at a somewhat higher grade than in the other varieties, but it is worth while as the demand will certainly exceed the supply, so that every good bird can be placed without much difficulty.

The breed, however, that is jumping ahead by leaps and bounds is undoubtedly the Campine, and deservedly so. I have kept many breeds of birds but few that can keep up the steady flow of eggs on such a small outlay in food and housing. The chicks hatch eighty to ninety per cent without difficulty, and with half a chance develop rapid-

Bufs that won championship of America. Whites out of great cock that as cockerel won championship of England and \$250 trophy. Never did we need room so sorely. You can get for \$12.50 now a bird you can't duplicate for \$37.50 at any other time. Nice breeders as low as \$3. In young stock we now have plenty of pound chicks, day-old chicks, young trios and pairs. NOW is the time to start and get Fall chicks from mature breeders or winners from our eggs or young chicks. Sale bulletin and catalog free. Write today.

**Cheviot Farms : Orpington Magazine, One Year, 10c : Route 2, Cincinnati, Ohio**

## WHITE ORPINGTONS

**Superb Type and Superior Quality**

### January and February Hatched Youngsters For Sale

Never have I had young chicks to prove more completely the claim made for them regarding type and quality than does my present young stock. It is indeed a remarkable line of cockerels and pullets hatched in Jan'y, Feb'y and March. As it is possible to detect any minor faults in birds after they are 8 weeks old, and to form a pretty fair idea as to how they are likely to develop, I have placed on sale about 600 of the most promising White Orpingtons ever produced. These will be ready for delivery in June—large, vigorous, massive birds raised on acres of blue grass sod.

**Order Stock at Bargain Prices**—Due to the fact that I must make room for younger stock, it will be necessary to dispose of a number of hens and cocks on the breaking up of my breeding pens the first of June. These, of course, must go at attractive prices; and here is an opportunity to get some foundation stock the stamina and vigor of which could only be arrived at through the wonderful blue grass range commanded by Russell Cave Poultry Yards as a branch of the renowned 8,000-acre Elmendorf Farm. Eggs at \$5, \$10 and \$20 a setting, and would urge all customers to place orders for same at as early a date as possible in order to get their choice of matings as the breeding pens will soon have to be broken. An extra fine lot of Duroc-Jersey young pigs for sale.

Russell Cave Poultry Farm

Elmendorf Stock Farm

Louis Lee Haggin, Prop.

R. 3, Box 1025, Lexington, Kentucky

ly. Alert, sprightly, hardy, prolific, they certainly are a great addition to any fancier's yard. As table birds, though small, they take the place of pheasants and have a flavor not unlike that of game, if hung.

Another breed must not be forgotten in the season's demands, and that is Faverolles, a breed that has so rapidly come to the front. More than a year ago I predicted that the day was not far distant when the White Faverolle would challenge the Orpington for a place in the front line and today the prediction is almost a fact. White Faverolles are very much talked about among the fancy today. Here in England they have a splendid following and the classes at many of the exhibitions make quite a showing. But a new departure made its debut in 'The Feathered World' this week in the form of Buff Faverolles, which I have been at work on for four years, and these

birds show promise of catching on from the start. The chicks are marvelous bodied birds of great width, depth and chunkiness, and as a table bird there will be nothing to touch them. They hold a record, too, in egg production that will keep the White Leghorns at work to spoil, for in one pen of seven birds not less than five eggs were collected daily from November to April, and we are still getting five and six a day, and the other pens run this one very closely. But the point they score so heavily over is "no broodiness." Last year in the White Faverolle yards there was only one broody, and so far none this season, and only one or two among the Buffs. This was the one weak spot in the Orpington fame, the fuss and trouble to be had with the broody hens in the spring and early summer.

With either the Buff or White Faverolle you get a layer none can touch,

a large, tender fleshed table bird equal in every way to the Orpington, and a bird that wastes none of its working days on a nest, but keeps at work supplying eggs. As exhibition stock they sell well and are very attractive in appearance. Certainly the display made at Madison Square Garden in 1911 by these birds, when the three blues were carried, started a career for the Buff and White Faverolles in America that will never die out. Both the Buffs and Whites may be found in the clean and in the feather-legged varieties, and it is hoped before long to see our clubs admit both varieties to the Standard, so that the public may take their choice in these points.

One up-to-date club has already been formed in America for clean-legged Whites. It will be interesting to watch the progress of these birds and to note which, the clean or feather-legged variety, wins supremacy in the long run.

# E. B. Thompson's Imperial "Ringlet" Barred Plymouth Rocks BARGAIN SALE FOR 1913

First Prize Cockerel and Champion Male and First Prize Pullet and Champion Female at Madison Square Garden, New York, 1913

Is the event in the Barred Plymouth Rocks; this sale stands out with a prominence that is clearly defined.

My special sale list is now ready for mailing and I offer the largest and finest assortment of Barred Rocks in all America at the most decisive price reductions and most emphatic bargains ever recorded.

## This Is America's Foremost Bargain Sale

And goes beyond anything ever before attempted in thoroughbred poultry. It is unprecedented. The resources of my "Ringlet" farm are unlimited and you can now secure Madison Square Garden, New York, winners and sons, brothers, sisters and daughters of New York winners, and birds of this richest New York prize winning blood at the decided bargain prices. Birds bought now at the prices in my special sale list will pay you splendid dividends.

## In This Special Sale List

Are listed the finest show birds, the finest breeders in single birds, pairs, trios and pens that I have ever offered in all my thirty-three years' career as a Barred Rock breeder, and at the rarest bargain prices. There are lots to meet the needs of all—the beginner who must begin right, the old breeder who will improve his stock, and the show man who wants to win in the strongest competition in the world. You will have the solid satisfaction of selection from the largest and richest New York prize winning stock and blood lines in America today—the selections are unbounded.

## The Imperial "Ringlets"

Are the proud product of more than a quarter of a century of Barred Rock breeding—they have the most fashionable barring and even blue color of the present day, they sell when no others will by reason of their matchless quality—no other strain holds so imperial a place in popular favor—their name leads all the rest. To meet success in winning prizes you must have my birds.

(See my ad on back cover page for the wonderful record of my "Ringlets" at last Winter's Madison Square Garden 1913 Show. This achievement takes rank in history as the most wonderful ever recorded since the New York show was founded.)

It will be to your interest to have this special sale list and take advantage of this opportunity to secure "Ringlets" at the cut down bargain prices. It is sound business judgment to buy what you want when offered for dollars less than it is worth, it is justice to yourself and economy. Whatever may be your wants in Barred Plymouth Rocks you will find it in my special sale list at bargain figures. The list will be mailed promptly upon request.

**EGGS** from the world's finest exhibition matings, \$10 per setting; four settings, \$35; 100 eggs, \$60. One-half these prices after June 10th. Elegant 70-page catalogue upon application. Address

*E. B. Thompson*

Lock Box 510  
Amelia, New York

June the month of roses, sunshine  
and rest after the A. P. A. election.

Let every good and true member of  
the A. P. A. rejoice, and let every  
member be a good and true one.

"Let us see as we have seen—  
Where all paths are dewy-green,  
And all human-kind are kin—  
Let us be as we have been."

The election of Mr. E. B. Thompson  
as president of the American Poultry  
Association will have a far-reaching  
effect. It marks a new epoch in the  
life of the grand old association.

Under date of May 10th Mr. Thomp-  
son wrote us: "I am now president-  
elect of the whole American Poultry  
Association. It is my hope and will be  
my greatest desire to have perfect har-  
mony, for with the united membership

the best results can be had which will  
lead the association to do better  
things for the benefit of the whole  
poultry industry. I leave tonight for  
Mansfield, O., to consult with President  
Hicks and Secretary Campbell to make  
a complete analysis of the whole sub-  
ject and in a short time will be in a  
position to understand fully what is  
needed for the betterment of the poul-  
try and poultry breeders' condition."

The almost unanimous re-election of  
Secretary S. T. Campbell is a well de-  
served honor for that most capable  
official.

The new members of the executive  
board, Messrs. W. C. Denny, U. R.  
Fishel and Charles D. Cleveland, form  
a trio of unusual ability. Mr. Denny  
has been our neighbor and life-long  
friend, as a breeder, judge and writer;  
he has made his mark in the poultry  
world. In Mr. Fishel and Mr. Cleve-  
land we have two of this country's  
best known and most successful breed-  
ers and business men. They are three  
live ones.

The next annual meeting will be held  
at Atlantic City, N. J., August 10th to  
16th. It should be a record meeting  
down by the ocean breezes.

We had intended answering Little  
Tommy's squib in the R. P. J. and  
Uncle Link's inspired article in the  
Stock-keeper. But what's the use?  
The members have fully answered all  
with their ballots.

We have full confidence in every  
member of the association that they  
will support the new officers elected  
and give the best there is in them for  
the uplift and the general welfare of  
the poultry industry.

It is a long time since we have writ-  
ten anything about Rule 17, and we  
don't intend to write about what is  
absolutely dead now.

The Madison Square Garden New  
York Show will be held December 31,  
1913, to January 5, 1914. Mr. Charles  
D. Cleveland, Eatontown, N. J., secre-  
tary.

Eggs for hatching are reduced to  
half price now, and it is not too late  
to raise and mature winners for next  
winter's great shows or to improve  
your stock. Most breeders also are  
offering their breeders for sale at  
greatly reduced prices. This is the  
time to buy.

The American Barred Plymouth Rock  
Club committee, appointed to work  
with the A. P. A. committee for the  
revision of the Barred Rock Standard,  
is Messrs. E. B. Thompson, H. D. Riley  
(secretary), W. S. Russell, C. H.  
Welles, Haldie Nicholson, M. W. Bald-  
win, A. C. Hawkins, W. E. Bright,  
Victor Bradley, John Pringle and H. P.  
Schwab. Breeders are requested to

write Mr. Riley, giving their views.  
His address is Strafford, Pa.

The John L. Cost memorial is a  
worthy object. If ever a man deserved  
a monument it is Mr. Cost. Personally,  
we knew him for many years, but no  
one man knows half the good he has  
done. We hope Editor DeLancy will  
make a big success of his efforts and  
collect a fund that will insure a fit-  
ting memorial for this man by poultry-  
men.

The judges selected for the next  
great Hagerstown Fair are G. O.  
Brown, Chas. McClave, Wm. G. Minich,  
Richard Oke, W. B. Atherton, G. H.  
Burgott, J. H. Drevenstedt, J. C.  
Kriner, Hugh A. Rose, H. P. Schwab,  
Loring Brown, H. Hoke, A. J. Braun,  
C. E. Twombly, Geo. Ewald and G. B.  
Hort.

Onlya Farm, Florham Park, N. J.,  
White Wyandotte specialists, are now  
offering at a special sale a large share  
of their breeders at from \$2 to \$5 each.  
Here is the opportunity for many. Note  
our mention of this farm and stock  
in last issue. We feel that at these  
prices they are selling birds at less  
than one-quarter value.

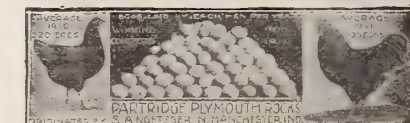

Men are very much like wine—age  
sours the bad and improves the good.

Interested in Buff Leghorns for the  
early shows. J. C. Punderford, Fre-  
neau, N. J., has the largest and best  
lot we have ever seen. They will be

## Special Reduction

### Day-Old Chicks 2-3 Months Pullets

Our thousands of every-year cus-  
tomers know that our usual prices  
are right for the high quality we give.  
We want to prove this to you and  
now is your opportunity to get, at  
exceptionally low cost, chicks that  
will develop into real egg producers  
and sure prize winners.

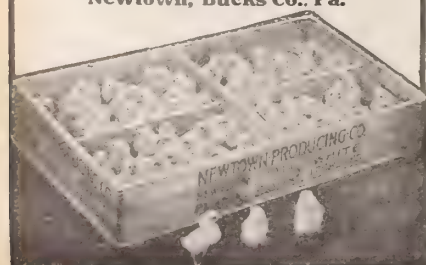

## Newtown S. C. White Leghorns

Large hatches come off each week,  
and thousands of day-old chicks  
will be shipped every Tuesday and  
Thursday during June.

This year there will be but a few  
thousand 2-, 3- and 4-months-old  
pullets for sale. Write us at once  
if you want any reserved.

Send now for poultry catalog Q and mating  
list and special offer for June. The catalog  
pictures the kind of birds you'll raise from  
Newtown chicks—birds that plainly show  
their great egg-laying type.

NEWTOWN PRODUCING CO.  
Newtown, Bucks Co., Pa.

in their prime in August. Remember this.

\* \* \*

The rains of April and the cold of May were not conducive to chicken raising. Better keep right on hatching for beef is going up daily.

\* \* \*

Now is the time to engage your art work. Catalogues, booklets and letter-heads of class are business getters. Arrange now for something new by writing to our art department.

\* \* \*

Mr. Wm. Barry Owen takes with him into retirement the regret of all who know him. His years of work in the poultry business made him thousands upon thousands of friends the world over and the industry has been greatly benefited by his having been connected with it. We wish him the rest he so well deserves—long life and all possible happiness.

\* \* \*

His successor, Mr. M. F. Delano, is one of our oldest poultry friends, a man of sterling qualities and a breeder and fancier of highest merit. His work for many years has been a prominent factor in Owen Farms success. Poultry has been his life work, and he well deserves every confidence the breeders can give him. Mr. Frank H. Davey is the superintendent. He has been connected with these farms for years and as a breeder and judge is favorably known.

\* \* \*

Strange isn't it—but every once in while something happens.

\* \* \*

The Baltimore show dates are January 5 to 10, 1914. Mr. Geo. O. Brown, No. 2027 East North avenue, is the secretary. Baltimore has the finest show hall in the country and they put up a beauty show every time.

\* \* \*

It don't cost the world to go into the chicken business, and the one who goes into it in a one-man way at first and learns it thoroughly is sure to be well satisfied with his investment.

\* \* \*

It is foolish at this time to attempt to make any radical changes in the Barred Rock Standard. The work of 30 or more years is just beginning to tell, and if let alone, as it should be, for a few years more its benefits will be appreciated by all. We will try and give our views fully in our July issue.

\* \* \*

Johnnie—"Mamma, our governess can see in the dark."

Mamma—"How do you know that?"

Johnnie—"Last night, out in the hall, I heard her tell papa that he hadn't shaved."

\* \* \*

The Panama Exposition at San Francisco in 1915 promises to arrange for and hold the largest poultry exhibit ever held. The men in charge are competent and even at this early date are busy. There the great East and the great West will meet. Being appointed one of the commissioners, my particular interest will be to have our eastern breeders attend and exhibit there. The East will make a showing that will be to its credit.

\* \* \*

President R. V. Hicks and President-elect E. B. Thompson, on their way East after their meeting at Secretary Campbell's home at Mansfield, O.,

## "O.K." Poultry Litter

TRADE MARK

Cheaper and much better than straw, clover, alfalfa, sawdust, shavings or anything else ever thought of for litter.

**"O. K." Keeps the Brooder Clean, Dry and Sweet without Once Cleaning Out**

One lot of "O. K." Litter lasts until the chicks have outgrown the brooder. In coops, laying houses, colony houses and scratching pens "O. K." Litter dries up the droppings so that the house is always dry, clean, sweet-smelling and sanitary, and needs cleaning out only once in four or five months. A tremendous saver of time and money.

**WRITE TO-DAY FOR FREE SAMPLE**

"O. K." Litter will not burn. Lice will not come where it is used. Tell us how many hens and chicks you keep—we will tell you how much "O. K." Litter you need. Write New York for free sample and printed matter.

**O. K. COMPANY, Dept. 173, 157 Water Street, New York City**  
Direct shipments also from Chicago and New Orleans.

## EGGS FROM PRIZE WINNING TABASCO REDS

**At Bargain Prices**

Old Acres is the acknowledged headquarters for the finest Single Comb Rhode Island Red males. Our record at Madison Square Garden and Boston shows for the last three years proves it. To introduce our Tabasco Reds to you we offer the following bargains: Eggs from pens 1 to 7 at \$15.00 per setting. Eggs from pens 8 to 13 at \$10.00 per setting. These pens are all headed by Madison Square Garden and Boston winners. Eggs from pens 14 to 17 at \$3.00 per setting. These are carefully mated pens, all related to our prize winners. Eggs from pens 18 and 19 are \$2.00 per setting, \$7.50 per 100. These are high class utility matings, (dark red and heavy layers.)

**This Is an Unusual Opportunity ◆ Do Not Miss It**

**Old Acres, Wm. G. Stephens, Mgr., Foxboro, Massachusetts**

stopped off at Buffalo to visit Mr. Robert Essex, president of the New York State Branch. We also had the pleasure of entertaining these two officials at our home. Mr. Hicks fully convinced us that Shakespeare did his own writing, for he is an authority on that subject. Mr. Thompson is full of enthusiasm over A. P. A. matters. He said: "The members have placed a great responsibility upon me, and everything that a man can do I will do

for the welfare of the association and the general poultry industry." That has the right ring to it and I believe Mr. Thompson will do his level best; he has never been known to do anything by halves.

The New Jersey wedding bells will ring early this fall. Final.

The association's real success is up to the members, so let us all take off

our coats and work, work for all there is in us.

Mr. Chas. H. Welles tells us in a letter that he has about a hundred choice breeding females and a few very fine males in pullet bred Barred Rocks to spare. Everybody knows this line. There is none better.

Those who have used "French's Poultry Mustard" find that it is all that is claimed for it. Be sure to ask for "French's." It's the original, the pure and the reliable kind.

We want in particular to commend the position taken in the late campaign by J. H. Drevenstedt. He is far-sighted and generous by nature and his handling of all affairs is that of a master.

When we think of Drev we are always reminded how much we still miss the good old American fancier of weekly fame and his page of editorials. There has been nothing just like it since.

The breeders report that egg orders are coming better this May than ever before. This is as it should be for birds hatched up to the end of June can be matured if kept growing. Late hatched birds are always the richest and best in color. The big Barred Rock breeders hatch into August and usually those birds make the winning cocks and hens the year after. Try this.

Mr. John W. Ward, Jr., Pennington, N. J., is arranging for a trip to England about the last of July to purchase a large line of Dark Cornish fowls for himself and for several other breeders. Mr. Ward has made a study of this variety and is one of their best known breeders, having won highest honors the past season at several of our best shows. He will buy birds while there for all those wishing some. Write him. H. P. S.

#### A SPLENDID OPENING.

The Editor of the American Poultry Journal is in position to aid a competent and reliable poultryman secure a position as manager of an Indiana poultry farm that is up-to-date in every sense of the word. The applicant must have a thorough knowledge of White Leghorns, as the owner of the plant wishes to exhibit extensively. At the present time he has an established egg-trade paying him a high premium.

There are now 1,200 to 1,500 birds on the plant. In addition to an equitable compensation, the right man would be given an interest in the net profits after he has demonstrated his worth.

The owner is a man who is interested in poultry from a fancier's standpoint, but, at the same time, wishes his plant to be self-supporting. He has the means to install any new device that is of real benefit, and he has not hesitated to buy some of the best birds in the country.

Any poultryman who desires a good position and can furnish the necessary reference, is invited to write The Editor, stating his age, experience, whether married or not, and the compensation he would expect. Here is a good opening for the right man.

## Keeler White Wyandottes

The perfection of poultry breeding for beauty and utility. Line bred and pedigree bred for the past twenty years. Winners at Chicago, St. Louis, Washington, D. C., New Orleans, Dallas, Tex., Los Angeles, etc. **Stock Bargains**—Summer sale of breeders at bargain prices during June, July and August. Send for special sales list describing these bargains, it's free. 500 January, February and March hatched young stock that will be ready for the Fall fairs and early Winter shows. Show Birds—1,500 April and May chicks for the Winter shows. Birds washed, conditioned and shipped direct to any show room without extra charge. Sixty-page art catalogue of America's finest White Wyandottes free, send for it (stamps appreciated.)

Chas. V. Keeler, R. 11, Winamac, Indiana

Your Choice of  
10,000

Ferris Leghorns

## 30% Less Than Actual Value

We raised 10,000 Improved White Leghorns this spring and you can get your pick of thousands of February and March hatched cockerels and pullets at 30% less than regular prices. These birds show splendid development, and they have the low, well spread tails, good heads, with white earlobes and smooth, evenly serrated combs; typical shape in all sections, with long backs and full breasts, and snow white plumage that you must have in order to win. We have been breeding winners for the largest shows for many years. We can furnish you with stock that we will guarantee to win at any fair or show where you want to exhibit. Ferris Leghorns are trapnested and will lay 175 or more eggs a year. We have been breeding them for egg production for more than 12 years. We ship on approval and insure all birds for 30 days. If they get out of condition we stand the loss. *Utility cockerels from \$2.00 up, pullets and hens from \$1.75 up.* We have a number of very choice breeding birds to spare that we have used in our best matings. Write us for further particulars; we will be glad to tell you just what we have. The summer prices make it worth your while to buy now even if you do not need the stock until winter. Males that will then cost you \$10.00 cost only \$7.00 now; the \$15.00 exhibition birds only \$10.50.

## We Can Ship Eggs And Chicks At Once On Receipt Of Order

There is still time to hatch chicks if you can give them good care. Chicks \$5.00 for 25; \$16.00 per 100 in June, \$4.00 for 25; \$12.00 per 100 after July 1st. Eggs, \$1.35 a setting; \$6.00 per 100 in June; \$1.20 a setting, \$5.00 per 100 in July. Safe arrival of chicks and fertility of eggs guaranteed. The above prices are for utility chicks and eggs. See catalog and mating list for prices of trapnested eggs and chicks, also the exhibition pens.

### Our Mammoth 132 Page Catalog is Free

It contains a lot of valuable information and will tell you all about White Leghorns and why they are best. Just write a postal today and let us send it and quote prices. Breed Ferris Leghorns and you will have eggs all next winter and can win wherever you want to exhibit. Take advantage of this summer sale and it will cost you very little to get a splendid start.

905 Union Avenue, Grand Rapids, Michigan

## NOTES FROM THE DIARY OF A CHICK.

By "Generosity."

(Editor's Note—"Generosity" is a Partridge Plymouth Rock male bird, bred and owned by S. A. Nofztger, North Manchester, Ind.)

## Synopsis.

This, the second chapter of a unique story that tells the important and daily events in the life of the "Beauty Breed," the Partridge Plymouth Rock, will be welcomed by many of our readers who remember the first chapter published by us about one year ago.

"Generosity," or "our hero," if you will pardon a time worn novel phrase, is the name of a Partridge Rock male product by Mr. S. A. Nofztger, the originator of this popular variety, of North Manchester, Ind.

The story tells of "Generosity," one of about forty little "chocolates" hatched at Oaklyn Place several years ago. He, with the rest of the small happy family, were carefully brooded and reared to maturity. Later some were taken to poultry exhibitions and the balance were sold and shipped away. To the relief of our chick hero his owner announced that he was to be reserved for breeding use, as he was produced from a special mating. At last he was taken to a long house and placed at the head of the best mating on Oaklyn Place.

That season he sired "Prise," a cockerel that won first at a leading show, and others that won later, thus assuring him a good home the balance of his life, which, from this chapter, it would seem he has greatly enjoyed.

IT has been some time since I told you of experiences at Oaklyn Place, but not because I have failed to think of you or had nothing to tell. The truth is there is always so much going on here that it is difficult to get a day into twenty-four hours.

My! what a difference in just a few years. Why, three or four years ago there were a few hundred Partridge Rocks here and an occasional visitor, but today everything is alive with "Brownies," old and young, and there is never a day but that some one comes to see us and the place where our variety was originated.

As spring approaches and out in the sunshine I see, running over green lawns, the little brown balls of down that a few short weeks since were eggs, many thoughts come to me—some of the past, others of the present and more of the future.

I remember the time when we first began to be recognized as a coming fowl and to be the attraction of the show wherever exhibited. My breast swells with pride when I recall first being mentioned as "father of the breed" or when the news reached us that our representatives had won the laying contest against all others.

But the bright light of these early deeds is somewhat dimmed by later achievements. Another pen of ours has defeated all others in a subsequent laying contest, establishing a record higher than the previous one. Fowls of our variety have won high honors in show rooms against all other breeds and other wonderfully creditable records in breeding pens have succeeded in getting Partridge Rocks styled the "Beauty Breed."

Will these little fluffy balls, which are now romping over the grass, grow into prize winners sufficient to bring to their proud owners the diplomas of the American Poultry Association, as their ancestors and relatives have done, or honor our breed by winning additional laying contests? Will they, too, be the attractions of future poultry shows?

But why this conjecture? It would, no doubt, be more interesting to readers to tell now of accomplishments and to

relate incidents of our lives, rather than to speculate on the future—to tell some of our experiences here at Oaklyn Place that would be beneficial to others in preference to prophesying great things to come.

Of greatest interest to me are the numerous conversations of the visitors here; in fact, we learn much by simply listening at Oaklyn Place. But there

are so many people with different views on subjects pertaining to poultry and particularly to the new variety to which I belong—Partridge Plymouth Rocks—that really it is often confusing to me.

What if I should tell some of the things that Mr. Nofztger don't want told? But I heard him say, just a few days ago, that there were no secrets at Oaklyn Place, so if he complains at

**E. O. Green : Portland, Indiana**

## Buff Wyandottes

Exclusively—Young and yearlings.

Good ones for sale.

**O. A. Browne VanWie and Logan Sts. Rockford, Ill.**

anything I say he will get reminded of this in short order.

Lately we have heard so much discussion of color that, actually, I sometimes wonder which is the correct part-ridge shade. This applies to both male and female. It seems that the greater number who come here are especially anxious to learn just what the true color is.

Some time ago a nice looking gentleman—from appearance he might have been a professional man, a banker or a manufacturer—came here and announced that he wished to buy some show hens. He stated that he desired the very darkest he could get and as he went along looking the females over it seemed almost impossible for him to find them dark enough.

We all had a good laugh for just a few days before an equally fine appearing man, who talked with a decided "yankee" accent, had spent much time in selecting fowl that were the very opposite in color and it seemed that about every fowl here was too dark for him. Of course, when some wish them quite dark and others equally light, this enables my kinfolk to find good homes when otherwise the poor fellows must go to market.

(To be continued next month)

## WHITE Orpingtons

Eggs from all pens at 1/2 price now. Some excellent breeders for sale at prices you cannot pass by. This stock bred from Chicago winners of the past 3 years.

**SHOEMAKER'S POULTRY BOOK**

**AND ALMANAC.**

There is nothing in the world like it. It contains over 200 large pages, with many fine illustrations. A number of BEAUTIFUL COLORED PLATES OF FOWLS—showing them in their natural color. Tells all about all kinds of thoroughbred chickens, with life-like illustrations. Prices of eggs for breeding purposes. TELLS HOW TO RAISE POULTRY SUCCESSFULLY, their care and management and how to treat all diseases common among them. Gives illustrations and descriptions of convenient poultry houses, and plans to build them.

**ALL ABOUT "GLOBE" INCUBATORS & BROODERS**

with fine illustrations, complete description, and lowest prices. ALL ABOUT OPERATING THE INCUBATOR. This chapter is marvelously complete, and worth much more than the price we ask for the whole book. This Poultry Book is worth dollars to anyone interested in the raising of fowls. It is an ENCYCLOPEDIA OF CHICKEN-REARING, and no one can well afford to be without it. Will be mailed to anyone upon receipt of only 15c. Money refunded if not pleased.

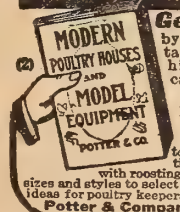

C. C. SHOEMAKER, Box 605, Freeport, Ill.
